
Contents

1	Overview with Some Definitions and Mathematics	1
1.1	General Introduction	1
1.2	Vibrations	5
1.3	Control	6
1.4	Energy	8
1.5	Scaling: Nondimensional Equations of Motion	9
1.6	Complex Numbers and Trigonometric Functions	11
1.6.1	Harmonic Functions and Periodicity	15
	Exercises	17
	References	20
2	One Degree of Freedom Systems	21
2.1	Development	21
2.1.1	An Aside About Friction	21
2.1.2	The One Degree of Freedom Equation of Motion	24
2.2	Mathematical Analysis of the One Degree of Freedom Systems	26
2.2.1	Undamped Free Oscillations	26
2.2.2	Damped Unforced Systems	33
2.2.3	Forced Motion	38
2.2.4	The Particular Solution for a Harmonically Forced Damped System	41
2.3	Special Topics	46
2.3.1	Natural Frequencies Using Energy	46
2.3.2	A General Particular Solution to Eq. (2.4)	50
2.3.3	Combining Springs and Dampers	52
2.3.4	Measuring the Damping Ratio	54
2.3.5	Support Motion	56
2.4	Applications	58
2.4.1	Unbalanced Rotating Machinery	58
2.4.2	Simple Air Bag Sensor	62
2.4.3	Seismometers and Accelerometers	65

2.5	Preview of Things to Come	69
2.5.1	Introduction to Block Diagrams	69
2.5.2	Introduction to Simulation: The Simple Pendulum . . .	72
	Exercises	75
	References	78
3	More Than One Degree of Freedom Systems and the Euler-Lagrange Process	79
3.1	Introduction: Degrees of Freedom	79
3.2	The Euler-Lagrange Equations	84
3.2.1	The Basic Undamped, Force-Free Euler-Lagrange Equations	85
3.2.2	External Forces (and Torques)	93
3.2.3	Dissipation and the Rayleigh Dissipation Function . . .	95
3.3	Linearization and Stability I	96
3.4	Some Two Degree of Freedom Systems	105
3.4.1	A Double Pendulum	105
3.4.2	The Pendulum on a Disk	108
3.4.3	Vibration Absorption	110
3.5	Electromechanical Systems	114
3.5.1	Simple Motors	114
3.5.2	Magnetic Suspension	123
3.6	Summary	126
	Exercises	127
	References	128
4	Modal Analysis	129
4.1	Discrete Systems	129
4.1.1	Undamped Systems	129
4.1.2	Forced Motion	137
4.1.3	Damping	142
4.2	Continuous Elastic Systems	158
4.2.1	Introduction	158
4.2.2	The Vibrating String	160
4.2.3	Longitudinal Vibrations of a Slender Beam	163
4.2.4	Transverse Vibrations of a Slender Beam	165
	Exercises	168
	References	171
5	Vibration Measurement	173
5.1	Vibration Measurement	173
5.2	Fourier Series and Transforms and Power Spectra	181
5.2.1	Fourier Series	182
5.2.2	Power Spectra	191
5.2.3	The Nyquist Phenomenon	194
	Exercises	198
	References	199

6	State Space, Equilibrium, Linearization, and Stability	201
6.1	State Space	201
6.1.1	Some Comments on Eigenvalues and Eigenvectors	205
6.2	Solving the General Inhomogeneous System of Linear Equations	211
6.2.1	The State Transition Matrix	211
6.2.2	Diagonalization	215
6.2.3	Companion Form	221
6.3	Equilibrium, Linearization, and Stability	222
6.3.1	Equilibrium	222
6.3.2	Linearization in State Space	223
6.3.3	Stability	227
6.4	Putting It All Together	229
6.4.1	The Overhead Crane	232
6.5	The Phase Plane	244
6.5.1	The Simple Pendulum	245
6.5.2	The van der Pol Oscillator	249
6.6	Summary	251
6.6.1	Four Linear Electromechanical Systems for Future Reference	251
	Exercises	254
	References	256
7	Classical Control	257
7.1	Introduction	257
7.1.1	What Do We Mean by Control?	257
7.1.2	PID Control of a Single-Input–Single-Output System	259
7.2	The Laplace Transform	271
7.2.1	The Transform	271
7.2.2	Solving Single Linear Ordinary Differential Equations of Any Order	273
7.2.3	Solving Systems of Linear Differential Equations	276
7.3	Control in the Frequency Domain	277
7.4	The Connection Between Transfer Functions and State Space	285
	Exercises	286
	References	288
8	The Basics of State Space Control	289
8.1	Introduction	289
8.1.1	Review of the Process: A Meta-algorithm	290
8.1.2	Transfer Function vs. State Space	292
8.2	Controllability	295
8.2.1	The Controllability Theorem	295
8.2.2	Companion Form	298

8.3	Using the Companion Form to Control a System	300
8.3.1	Application to the Simple (4D) Overhead Crane	303
8.4	Three More Examples	308
8.4.1	More on Pole Placement	316
8.4.2	Disturbances	322
8.5	Summary	327
	Exercises	329
	Reference	331
9	Observers	333
9.1	Introduction	333
9.2	General Analysis	334
9.2.1	Linear Systems	334
9.2.2	Nonlinear Systems	344
9.3	The High-Inductance Overhead Crane	350
9.3.1	The Gains	351
9.3.2	The Observer Gains	353
9.4	Summary	357
	Exercises	358
	Reference	359
10	Tracking Control	361
10.1	Introduction	361
10.2	Tracking with Full State Feedback	362
10.2.1	Reference Dynamics	363
10.2.2	The Reference State and the Matrix A_r	366
10.3	The Overhead Crane as an Extended Example of Tracking Control	373
10.3.1	General Comments	373
10.3.2	Tracking a Sinusoidal Path	373
10.3.3	Tracking a More Useful Position	383
10.4	Tracking with an Observer	387
10.5	Summary of Linear Control	390
	Exercises	391
11	Introduction to Nonlinear Control	395
11.1	Feedback Linearization	395
11.1.1	A Symbolic Third-Order System	397
11.2	Nonlinear Control of a Kinematic Chain	409
11.3	Elementary Robotics	415
11.3.1	Some Comments on Three-Dimensional Motion	417
11.3.2	Path Following	423
	Exercises	429
	References	431
	Index	433

Mechanical Systems

A Unified Approach to Vibrations and Controls

Gans, R.F.

2015, XVI, 437 p. 62 illus., 38 illus. in color., Hardcover

ISBN: 978-3-319-08370-4
