

Contents

1	Introduction	1
2	Electricity Markets	5
2.1	Electricity Features	5
2.1.1	Storage	5
2.1.2	Transport	7
2.2	Market Microstructure	9
2.2.1	Intraday Market and Balancing Mechanism	10
2.2.2	Day-Ahead Market	13
2.2.3	Forward Market	15
2.2.4	The Diversity of Electricity Markets	19
2.3	Real Derivatives	21
2.4	Conclusion	25
3	Price Models	27
3.1	Preliminary Remarks	29
3.2	HJM-Style Forward Curve Models	31
3.2.1	Principle	32
3.2.2	The Case of Electricity	34
3.3	One-Factor Spot Model	38
3.3.1	Mean-Reversion Process	39
3.3.2	Mean-Reverting Jump-Diffusion Models	42
3.3.3	Non-Gaussian Mean-Reversion Models	45
3.3.4	Conclusion	47
3.4	Multi-factor Spot Models	48
3.4.1	An Illustrative Example	48
3.4.2	A Review of the Multi-factor Models	50
3.4.3	Conclusion	52

3.5	Structural Models.	52
3.5.1	The Mother of All Structural Models	53
3.5.2	Auxiliary Variables	54
3.5.3	Stack Curve Models.	57
3.6	Conclusion	63
4	Derivatives.	65
4.1	Spreads	66
4.2	Power Plants and Tollings.	71
4.3	Storage and Swings	78
4.4	Retail Contracts	82
4.5	Weather Derivatives	85
5	Conclusion.	89
	References.	91

Electricity Derivatives

Aid, R.

2015, XIV, 97 p. 28 illus. in color., Softcover

ISBN: 978-3-319-08394-0
