

# Contents

- 1 Science . . . . . 1**
  - 1.1 Natural Philosophy . . . . . 1
  - 1.2 Evolution of Scientific Thought . . . . . 3
  - 1.3 Basic and Applied Research . . . . . 7
  - 1.4 From the Very Small to the Very Big . . . . . 9
  - 1.5 Lasers. An Example . . . . . 11
  - 1.6 Critical Examination: The Socratic Method. . . . . 13
  - 1.7 Headwinds to Research and Science . . . . . 16
- 2 Philosophy, Science and Ethics . . . . . 21**
  - 2.1 Philosophy: Know Yourself . . . . . 21
  - 2.2 Philosophy and Science: Thales . . . . . 24
  - 2.3 Protagoras . . . . . 28
  - 2.4 Philosophy and Beliefs: Pythagoras . . . . . 31
  - 2.5 Life and Death . . . . . 33
  - 2.6 Science and Ethics . . . . . 35
  - 2.7 Research on Improving the Quality of Life . . . . . 38
  - 2.8 Why Science Is Amoral . . . . . 41
- 3 The Physicist’s Method . . . . . 45**
  - 3.1 Scientific Experiments . . . . . 45
  - 3.2 The Heart of the Matter . . . . . 48
  - 3.3 Cause and Effect. . . . . 50
  - 3.4 Laws in Physics: A Case Study with Entropy . . . . . 54
  - 3.5 Entropy, Noise, and Errors . . . . . 57
  - 3.6 Rocket Science and Financial Analysis . . . . . 59
  - 3.7 Case Study with Moore’s Law . . . . . 62

<b>4</b>	<b>Models and Simulation</b>	67
4.1	Simulation: Back to Fundamentals	67
4.2	Simulated Environments	70
4.3	Simpler and More Complex Models	73
4.4	Fractals and Chaos Theory	76
4.5	The Downside of Flawed Models	80
4.6	Testing Models, Hypotheses, and Forecasts	83
<b>5</b>	<b>Education for Science and Technology</b>	87
5.1	Learning How to Learn	87
5.2	A Giant Step in Education: The Invention of Writing	91
5.3	The Use of Knowledge	94
5.4	Opening the Human Mind: Asymmetries and Nonlinearities	97
5.5	Technical Analysis of Tools and Models	100
5.6	Being Proactive	104
<b>6</b>	<b>Technology</b>	109
6.1	Technology and Society	109
6.2	A Brief History of Technology	111
6.3	Biomedical Engineering. A Case Study	114
6.4	Meta-Analysis and the Fermi Principle	117
6.5	Technology's Impact	120
6.6	The Risk of Human Errors	123
6.7	Technology and Promotion	126
<b>7</b>	<b>Technology and the Political Challenge of Energy Supply</b>	129
7.1	Power Production and Consumption	129
7.2	Is It Possible to Ease Energy Dependency?	133
7.3	Energy Efficiency	136
7.4	Bubbles in Power Economics. The LEDs	140
7.5	Shortage of Energy and Inefficient "Solutions"	143
7.6	Cars, Car Users, and the Environment	147
<b>8</b>	<b>Sources of Energy</b>	151
8.1	Is Clean Energy a Chimera?	151
8.2	Coal	155
8.3	Hydroelectric Power: A Case Study with the Aswan Dam	157
8.4	Oil	161
8.5	Gas and Biofuels	164
8.6	Shale Gas and Oil	167
8.7	Fracking's Downside	171
8.8	Solar	172
8.9	Wind Power	175

<b>9</b>	<b>Challenges of Nuclear Power Production . . . . .</b>	<b>181</b>
9.1	An Introduction to Nuclear Power . . . . .	181
9.2	Nuclear Power Production in France . . . . .	185
9.3	Germany Abandons Nuclear Power . . . . .	188
9.4	Japan's Nuclear Power Catastrophe . . . . .	191
9.5	We Should Learn from Past Accidents. . . . .	194
9.6	Evaluating the Life Cycle of Nuclear Plants . . . . .	197
9.7	The Challenge of Decommissioning Nuclear Plants . . . . .	202

Science and Technology

Chorafas, D.N.

2015, XV, 207 p. 1 illus., Hardcover

ISBN: 978-3-319-09188-4
