

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Properties of Black Holes in a Nutshell	2
1.2	Gravitational Fields Around a Black Hole	4
1.2.1	General Relativistic Approach	4
1.2.2	Pseudo-Newtonian Approach	7
1.2.3	Fate of Matter When It Approaches the Innermost Stable Orbit	7
1.3	Accretion Processes: General Views	8
1.4	Fluid Dynamical Aspects of an Accretion Flow	9
1.5	Shocks	10
1.5.1	Shock Conditions from Conservation Equations	11
1.5.2	Relation Between the Pre-shock and the Post-shock Mach Numbers in an Adiabatic Case	13
1.5.3	Comments on Entropy	14
1.5.4	Rankine-Hugoniot Shocks, Isentropic Compression Waves and Isothermal Shocks	15
1.5.5	Shocks in Accretion Flows	15
1.6	Importance of Numerical Simulations in Astrophysics	16
1.7	An Overview of Steady Accretion Flow Models:	
	Analytical Aspects	16
1.7.1	Spherical Accretion: Bondi Flow	17
1.7.2	Approaches to Disc-Type Solutions	21
1.7.3	The Standard Disc Model	22
1.7.4	Thick Accretion Discs	24
1.7.5	Advective Discs	24
1.7.6	Two Component Advective Flows	26
	References	27

<b>2</b>	<b>Overview of Numerical Simulations on Accretion Processes and Our Objectives</b>	<b>29</b>
2.1	Introduction	29
2.2	Simulation of Inviscid Flows	30
2.3	Simulation of Viscous Flows	35
2.4	Goals of the Thesis	39
2.5	Some Remarks on Units and Dimensions	40
	References	40
<b>3</b>	<b>Governing Equations and Computational Methods</b>	<b>43</b>
3.1	Equations for Inviscid Flows	44
3.1.1	Ideal Gas Equation of State	44
3.1.2	Equations for Inviscid Flows in Conservative Form	45
3.2	Numerical Approach to Solving Equations	46
3.2.1	Finite Difference Methods	47
3.2.2	Discretization	47
3.2.3	Lagrangian Method	48
3.2.4	Eulerian Method	48
3.3	Stability of Finite Difference Methods	48
3.3.1	Time Step	49
3.3.2	Grid size	49
3.3.3	Initial and Boundary Conditions	49
3.4	Flux Jacobians for Equations for Inviscid Flows	49
3.4.1	Eigenvalues and Eigenvectors of the Jacobian matrix	51
3.4.2	Total Variation Diminishing Scheme	54
3.4.3	Characteristics of TVD	55
3.4.4	Linearization of the Nonlinear Problem	56
3.5	Viscous Accretion Flows	57
3.6	Comparison Between Non-viscous and Viscous Equations	58
3.6.1	Non-viscous Equations in General Form	58
3.6.2	Viscous Equations in General Form	59
3.6.3	The Viscous Term	60
3.6.4	The Viscous Term in Various Forms	61
3.6.5	Effects of Molecular Viscosity in Accretion Flows	61
3.6.6	Various Approaches to Quantify Turbulent Viscosity	
	Based on the $\alpha$ Prescription	62
3.6.7	Description of Viscosity for Thick Accretion Flows	64
3.7	Implementation of Viscosity in the Numerical Scheme	65
3.8	Energy Equation with Power-Law Cooling	65
	References	67

<b>4</b>	<b>Simulation Procedure and the Test of the Code</b>	69
4.1	Simulation Procedure	69
4.1.1	Geometry Used for Our Simulations	69
4.1.2	Computational Box and Initial Conditions	70
4.1.3	Comments on Parameters and Assumptions	71
4.1.4	Boundary Conditions	71
4.1.5	Comments on Timescales	72
4.2	Comments on Code Parameters	72
4.3	Tests: A Flow Without Angular Momentum	73
4.3.1	Bondi Flow Simulation	73
	References	75
<b>5</b>	<b>Simulation for Inviscid Sub-Keplerian Flows and Shocks</b>	77
5.1	Introduction	77
5.2	Simulation of Non-rotating Flows with Different Boundary Conditions Obtained from Standard Models	78
5.3	Simulation of Flows with Angular Momentum and Finite Inflow Thickness	79
5.3.1	Time Variation of Shock Locations	83
5.4	Infall Timescales of Sub-Keplerian Flows	86
5.4.1	Infall Timescales for the Flows with Different Specific Angular Momenta ( $\lambda$ )	87
5.4.2	Infall Timescales for the Flows with Different Specific Energies ( $\mathcal{E}$ )	88
5.5	Ratio of the Outflowing and Incoming Matters	89
	References	90
<b>6</b>	<b>Simulation of Viscous Accretion Flows</b>	91
6.1	Introduction	91
6.2	Computational Procedure	92
6.3	Results and Discussions	93
6.3.1	Isothermal Injection at the Outer Boundary	93
6.3.2	Viscous Effects on Outflows	98
6.3.3	Viscous Flow with a Constant Height Injection in Radial Direction	99
6.3.4	Vertical Equilibrium at the Outer Boundary	101
6.4	Effects of Boundary Location	106
6.5	Effects of Viscous Stress Components	107
	References	109
<b>7</b>	<b>Effects of Power-Law Cooling in Viscous Flows</b>	111
7.1	Introduction	111
7.2	Computational Procedure	113

7.3	Simulation Results . . . . .	114
7.3.1	Time Variation of Matter Contents in the Keplerian and Sub-Keplerian Components . . . . .	121
7.4	Comparison of Our Result with Other Models . . . . .	122
	References . . . . .	123
<b>8</b>	<b>Conclusions and Future Plans . . . . .</b>	<b>125</b>
	References . . . . .	129

Numerical Simulation of Viscous Shocked Accretion  
Flows Around Black Holes

Giri, K.

2015, XXII, 129 p. 54 illus., 8 illus. in color., Hardcover

ISBN: 978-3-319-09539-4
