## Part I The Main Text

<b>1</b>	<b>Introduction</b>	3
1.1	Introductory Remarks	3
1.2	Historical Background	3
1.2.1	Physics Up to the End of the Nineteenth Century	3
1.2.2	Problems of Classical Physics	4
1.3	Physics in the Twentieth Century and Beyond	4
1.3.1	Two Revolutions in Physics	4
1.3.2	The Theory of Relativity	5
1.3.3	Quantum Mechanics	5
1.3.4	Outlook for the Twenty First Century	5
1.3.5	The Scope of This Book	6
1.4	Methodological Remarks	6
1.4.1	The Difference Between Mathematics and Physics	6
1.4.2	Domain of Validity	7
1.4.3	Approximation	7
1.4.4	Dimensions	7
1.4.5	Axiomatic Versus Historical Approach	8
	References	8
<b>2</b>	<b>Classical Mechanics</b>	9
2.1	Introduction	9
2.2	Historical Remarks	10
2.2.1	Aristotelian Physics	10
2.2.2	Galileo and Newton	10

2.3	Newtonian Classical Mechanics. . . . .	12
2.3.1	Newton's Equations for a System of Point Particles . . . . .	12
2.3.2	Newton's Equations: A System of First Order Equations . . . . .	13
2.4	The Lagrangian Formulation of Classical Mechanics . . . . .	13
2.4.1	Lagrangian Variational Problems . . . . .	13
2.4.2	Newton's Equations as Variational Equations . . . . .	15
2.5	The Hamiltonian Formulation of Classical Mechanics . . . . .	15
2.6	An Intrinsic Formulation . . . . .	17
2.6.1	Introduction. . . . .	17
2.6.2	General Dynamical Systems . . . . .	17
2.6.3	The Lagrange System. . . . .	18
2.6.4	The Hamilton System. . . . .	18
2.7	An Algebraic Formulation . . . . .	19
	References. . . . .	20
<b>3</b>	<b>Quantum Theory: General Principles . . . . .</b>	<b>21</b>
3.1	Introduction . . . . .	21
3.2	Historical Background . . . . .	21
3.2.1	Introduction. . . . .	21
3.2.2	Atomic Spectra . . . . .	22
3.2.3	Earlier Ideas . . . . .	23
3.2.4	The Emergence of Quantum Mechanics Proper . . . . .	24
3.2.5	Quantum Theory in Twentieth Century Physics . . . . .	24
3.3	The Beginning of Quantum Mechanics . . . . .	24
3.3.1	Two Different Forms . . . . .	24
3.3.2	Unification . . . . .	25
3.4	Quantum Theory: General Remarks . . . . .	26
3.4.1	A Non-historical, 'Axiomatic' Presentation . . . . .	26
3.4.2	Von Neumann's Mathematical Formulation. . . . .	26
3.4.3	Quantum Theory and Quantum Mechanics . . . . .	27
3.5	The Basic Concepts of Quantum Theory: A Preview . . . . .	28
3.6	States and Observables. . . . .	30
3.6.1	Two Basic Principles: Axiom I and Axiom II . . . . .	30
3.6.2	Axiom III: Physical Interpretation of Axiom I and Axiom II . . . . .	32
3.6.3	The Simplest Case: Axiom III for a Single Observable . . . . .	32
3.6.4	The Case of Discrete Spectrum . . . . .	33
3.6.5	The Case of Continuous Spectrum . . . . .	35
3.7	Systems of Observables . . . . .	36
3.7.1	Commensurable Observables . . . . .	36
3.7.2	Systems of Incommensurable Observables. . . . .	39

3.7.3	Functions of Observables . . . . .	39
3.7.4	Complete Systems of Commensurable Observables. . . . .	40
3.7.5	The Measurement Process . . . . .	41
3.8	Time Evolution . . . . .	41
3.8.1	Time Evolution of Autonomous Quantum Systems . . . . .	41
3.8.2	The Schrödinger Equation . . . . .	42
3.8.3	The Heisenberg Picture . . . . .	45
3.8.4	Stationary States and Constants of the Motion . . . .	46
3.8.5	Time Evolution for Nonautonomous Quantum Systems . . . . .	47
3.8.6	The Schrödinger Equation for Nonautonomous Systems . . . . .	48
3.8.7	The Interaction Picture . . . . .	49
3.9	Symmetries. . . . .	50
3.9.1	Groups of Symmetries . . . . .	50
3.9.2	Infinitesimal Symmetries. . . . .	50
	References. . . . .	51
<b>4</b>	<b>Quantum Mechanics of a Single Particle I . . . . .</b>	<b>53</b>
4.1	Introduction . . . . .	53
4.2	'Diagonalizing' the $P_j$ : The Fourier Transform . . . . .	56
4.3	A General Uncertainty Relation. . . . .	60
4.4	The Heisenberg Uncertainty Relation . . . . .	60
4.5	Minimal Uncertainty States. . . . .	60
4.6	The Heisenberg Inequality: Examples . . . . .	62
4.7	The Three Dimensional Case . . . . .	63
<b>5</b>	<b>Quantum Mechanics of a Single Particle II . . . . .</b>	<b>65</b>
5.1	Time Evolution of Wave Functions . . . . .	65
5.2	Pseudo Classical Behaviour of Expectation Values . . . . .	66
5.3	The Free Particle. . . . .	67
5.4	A Particle in a Box . . . . .	69
5.5	The Tunnel Effect . . . . .	71
<b>6</b>	<b>The Harmonic Oscillator. . . . .</b>	<b>73</b>
6.1	Introduction . . . . .	73
6.2	The Classical Harmonic Oscillator. . . . .	73
6.3	The Quantum Oscillator . . . . .	74
6.4	Lowering and Raising Operators . . . . .	77
6.5	Time Evolution . . . . .	81

6.6	Coherent States . . . . .	81
6.7	Time Evolution of Coherent States . . . . .	86
6.8	The Three Dimensional Harmonic Oscillator. . . . .	87
<b>7</b>	<b>The Hydrogen Atom . . . . .</b>	<b>89</b>
7.1	Introduction: Historical Remarks . . . . .	89
7.2	The Classical Model . . . . .	90
7.3	The Quantum Model . . . . .	90
7.4	Rotational Symmetry . . . . .	91
7.4.1	Introduction. . . . .	91
7.4.2	Representations of the Lie Algebra of $SO(3)$ . . . . .	91
7.4.3	Action of $SO(3)$ in the Hilbert Space $\mathcal{H} = L^2(\mathbb{R}^3, d\mathbf{x})$ . . . . .	92
7.4.4	The Mathematical Structure of $\mathcal{H}$ . . . . .	93
7.5	The Schrödinger Equation . . . . .	94
7.5.1	Angular Momentum Eigenfunctions . . . . .	94
7.5.2	The Radial Part of the Eigenfunctions . . . . .	96
7.5.3	Asymptotic Behaviour of the Radial Eigenfunctions. . . . .	97
7.5.4	A Power Series Expansion for $v(\rho)$ . . . . .	98
7.5.5	The Energy Eigenvalues and Eigenfunctions . . . . .	99
7.6	Transitions in the Hydrogen Atom. . . . .	101
7.7	The Hydrogen Atom: More Sophisticated Descriptions. . . . .	101
	References. . . . .	103
<b>8</b>	<b>Spin: Atomic Structure . . . . .</b>	<b>105</b>
8.1	Spin . . . . .	105
8.1.1	Introduction. . . . .	105
8.1.2	Historical Remarks. . . . .	106
8.1.3	The Description of a Single Particle with Spin. . . . .	107
8.2	Structure of Atoms in General . . . . .	108
8.2.1	Introduction. . . . .	108
8.2.2	Electron Shells and Subshells . . . . .	109
8.3	Interactions Inside the Atom . . . . .	110
8.3.1	Introduction. . . . .	110
8.3.2	The Russell–Saunders Coupling. . . . .	110
8.3.3	The $jj$ Coupling . . . . .	111
8.4	The Zeeman Effect . . . . .	112
8.4.1	Introduction. . . . .	112
8.4.2	Main Properties of the Zeeman Effect. . . . .	112
8.4.3	Historical Remark . . . . .	113
	Reference . . . . .	113

<b>9</b>	<b>Many Particle Systems</b>	115
9.1	Introduction	115
9.2	Combining Quantum Systems—Systems of $N$ Particles	116
9.3	Systems of Identical Particles	118
9.4	An Example: The Helium Atom	122
9.5	Historical Remarks	125
9.6	The Fock Space Formalism for Many Particle Systems	126
9.6.1	Introduction.	126
9.6.2	The Mathematical Framework	127
9.6.3	An Explicit Realization.	130
9.6.4	Quasiparticles	131
9.6.5	A Remark on Our Notation for Operators	131
9.7	A Heuristic Formulation: ‘Second Quantization’	131
9.7.1	Introduction.	131
9.7.2	A Single Particle: A Reminder.	133
9.7.3	The Many Particle Situation	134
9.7.4	The Fock Space Formulation.	135
9.7.5	The Fock Space Formalism and Quantum Field Theory	137
	References.	138
<b>10</b>	<b>Review of Classical Statistical Physics</b>	139
10.1	Introduction	139
10.2	Thermodynamics.	140
10.3	Classical Statistical Physics (Continued).	143
10.4	The Three Main Ensembles	144
10.5	The Microcanonical Ensemble	144
10.6	The Canonical Ensemble	146
10.7	The Grand Canonical Ensemble	147
10.8	The Canonical Ensemble in the Approach of Gibbs.	148
10.9	From Statistical Mechanics to Thermodynamics	149
10.10	Summary	151
10.11	Kinetic Gas Theory	151
10.12	General Statistical Physics: The Ising Model.	152
	References.	154

24.3.2	Lie Groups	375
24.3.3	Matrix Lie Groups	376
24.4	Lie Algebras	376
24.4.1	Lie Algebras as 'Abstract' Objects: Generalities	376
24.4.2	Constructing New Lie Algebras from Given Ones	377
24.4.3	Quotient Lie Algebras	377
24.4.4	Direct Sum Lie Algebras	378
24.4.5	Semidirect Sum of Two Lie Algebras	378
24.4.6	Lie Algebras: Concrete Examples	378
24.5	Relation Between Lie Groups and Lie Algebras	379
24.6	Representations of Lie Groups	381
24.6.1	General Remarks	381
24.6.2	Representations of Groups	381
24.6.3	Reducible and Irreducible Representations	382
24.6.4	The Central Problem of Group Representation Theory	382
24.6.5	Constructing New Representations from Given Ones	382
24.7	Representations of Lie Algebras	383

24.8	The Representations of $su(2)$ and $so(3, \mathbb{R})$ . . . . .	384
24.8.1	Generalities . . . . .	384
24.8.2	Ladder Operators . . . . .	385
24.8.3	Eigenvalues and Eigenvectors of $L^2$ and $L_3$ . . . . .	386
24.8.4	Matrix Elements . . . . .	387
24.8.5	Summary . . . . .	387
24.9	Reducing Tensor Product Representations of $su(2)$ . . . . .	388
24.10	Super Lie Algebras . . . . .	390
	References. . . . .	391
<b>25</b>	<b>Generalized Functions.</b> . . . .	393
25.1	Introduction . . . . .	393
25.2	The Dirac $\delta$ -function: Heuristics . . . . .	394
25.3	The Rigorous Formalism . . . . .	396
25.4	Problems . . . . .	398
	References. . . . .	398
<b>26</b>	<b>Dirac's Bra-Ket Formalism.</b> . . . .	401
26.1	Introduction . . . . .	401
26.2	A Vector Space $V$ and Its Dual $V^*$ . . . . .	401
26.3	Dirac's Use of This Triple $(V, V^*, J)$ . . . . .	402
26.4	The Dirac Formalism in Infinite Dimensional Space . . . . .	402
	References. . . . .	403
<b>27</b>	<b>Algebras, States, Representations.</b> . . . .	405
27.1	Introduction . . . . .	405
27.2	Algebras: Generalities . . . . .	405
27.3	Normed $*$ -Algebras: Banach $*$ -Algebras. . . . .	407
27.4	$C^*$ -Algebras . . . . .	408
27.5	Von Neumann Algebras. . . . .	409
27.6	Smooth $*$ -Algebras . . . . .	413
27.7	Poisson and Poisson-Fr�chet $*$ -Algebras, etc. . . . .	414
27.8	States. . . . .	415
27.9	States and Representations: The GNS Representation. . . . .	416
	References. . . . .	417

Quantum Theory

A Mathematical Approach

Bongaarts, P.

2015, XXXII, 445 p. 8 illus., Hardcover

ISBN: 978-3-319-09560-8
