1	Introduction	1
1.1	Active Galactic Nuclei	2
1.1.1	Overview	2
1.1.2	The Unified Model	3
1.2	X-ray Binaries	4
1.3	Mass Accretion onto Black Holes	5
1.3.1	Overview	5
1.3.2	Spherically Symmetric Accretion	8
1.3.3	The Thin-Disc Accretion Model	8
1.3.4	Timescales in Accretion Disc Theory	10
1.3.5	Radiatively Inefficient Accretion Flows	10
1.4	The X-ray Spectra of Accreting Black Holes	11
1.4.1	Overview	11
1.4.2	Inverse-Compton Scattering	12
1.4.3	Spectral States in X-ray Binaries	15
1.4.4	The X-ray Spectral Components of XRBs and AGN	17
1.4.5	Variability in Black Hole Accretion	19
1.5	The Chandra X-ray Observatory	20
1.6	The Rossi X-ray Timing Explorer	21
1.7	Summary of This Thesis	22
	References	23
2	AGN: Absorption, Spectral Classification and the Optical Emission Lines	27
2.1	Synopsis	27
2.2	Introduction	27
2.3	The Sample	29
2.4	The Optical Emission Lines from AGN	29
2.5	Classifying Low Luminosity AGN	30
2.6	The Optical Lines as Indicators of X-ray Luminosity	32
2.7	Data Reduction	34

2.7.1	Observation Selection	34
2.7.2	Image Analysis	34
2.7.3	Spectral Fitting	34
2.8	Distribution of M_{BH} , Eddington Ratio and N_{H} for the Palomar Sample	36
2.9	Identifying the Compton-Thick AGN in Our Sample	39
2.10	The Relationship between $L_{2-10\text{keV}}$ and $L_{[\text{O III}]}$ and its use as an Absorption Indicator	40
2.11	A Comparison of Absorption in the X-ray and Optical Bands	43
2.12	The Unusual Case of the Seyfert-2 Galaxy NGC 3147	44
2.13	X-ray Luminosity, Radio Luminosity and the Fundamental Plane	47
2.14	Summary of the Main Observational Results	48
2.15	Discussion	49
	References	50
3	Very Fast X-ray Spectral Variability in Cygnus X-1	55
3.1	Synopsis	55
3.2	Introduction	55
3.3	Observations	57
3.4	Spectral Fitting	58
3.4.1	Time-Averaged Fits to Each Complete Observation	58
3.4.2	Determining which Model Parameters to Fix	60
3.4.3	Fitting the Spectra at 100 ms Time Resolution	62
3.5	Cross-Correlation of Γ and Count Rate on 100 Millisecond Time-Scales	63
3.5.1	The Hard States	63
3.5.2	The Soft/Intermediate States	66
3.6	Cross-Correlation of Γ and Count Rate on 16 Millisecond Time-Scales	67
3.6.1	A Closer Look at the Soft State, Bright Hard State and Faint Hard State	67
3.6.2	A Lag between the Soft and Hard Counts	72
3.7	A Comparison with GX 339-4	72
3.8	The Effect of Noise on My Results	73
3.9	Summary of the Main Observational Results	75
3.10	Discussion	75
	References	78
4	The $\dot{m}_E$-Γ Relationship in XRBs and AGN	81
4.1	Synopsis	81
4.2	Introduction	81
4.3	Observations and Data Reduction	83

4.3.1	The Sample	83
4.3.2	Data Reduction	84
4.3.3	Spectral Fitting	85
4.4	The $\dot{m}_E - \Gamma$ Relationship in X-ray Binary Systems	86
4.4.1	Short Time-Scale Data	86
4.4.2	Long Time-Scale Data	91
4.4.3	A Comparison of the $\dot{m}_E - \Gamma$ Correlation on Long and Short Time-Scales	92
4.4.4	Hardness-Intensity Diagrams	96
4.4.5	An Alternative Interpretation of the Short Time-Scale Anti-correlation in Cygnus X-1	98
4.5	The $\dot{m}_E - \Gamma$ Relationship in AGN	100
4.5.1	NGC 1052	100
4.5.2	NGC 3516	101
4.5.3	NGC 3998	103
4.5.4	NGC 5548	103
4.5.5	NGC 7213	105
4.5.6	Summary of AGN Results	107
4.6	Summary of the Main Observational Results	108
4.7	Discussion	109
	References	111
5	Conclusions	113
5.1	Summary of Findings	113
5.1.1	The Nature of Compact Emission Regions in Nearby Galactic Nuclei	113
5.1.2	X-ray Spectral Variability in XRBs	114
5.1.3	A Comparison with AGN	116
5.2	Future Work	116
	References	118
