## Part I Introduction and Fundamentals of Optimized Adaptive Controllers and Systems

<b>1</b>	<b>Introduction to Optimized Adaptive Controllers and Systems</b>	<b>3</b>
1.1	Introduction	3
1.2	Concept of Control Loop in an Industrial Process	4
1.3	Requirements for an Advanced Industrial Control Methodology	6
1.4	The Methodology of Negative Feedback	8
1.5	The Impact of Digital Computers in Process Control	10
1.6	Basic Concept of Discrete Time Modelling	11
1.7	Predictive Control: Origin and Basic Concepts	16
1.8	The Effect of Perturbations	17
1.9	The Need for Adaptation	18
1.10	Adaptive Systems	19
1.11	Adaptive Predictive Control	22
	1.11.1 Block Diagram	22
	1.11.2 Application Example	23
1.12	Extended Strategy of Predictive Control	25
1.13	Optimized Adaptive Control	26
1.14	Limits of Adaptive Predictive Control	26
1.15	Adaptive Predictive Expert Control	27
	1.15.1 ADEX Domains	27
	1.15.2 Block Diagram and Functional Description	28
	1.15.3 Conceptual Example of an Application	29
1.16	Industrial Optimized Adaptive Control	30
	1.16.1 Optimized Process Control System	30
	1.16.2 Optimized Process Control Strategy	31
	1.16.3 Optimized Adaptive Process Control Systems	31

1.17	A First Level of Conceptual Knowledge . . . . .	32
	References. . . . .	32
<b>2</b>	<b>Scenarios, Notation and Stability Conditions for Adaptive Predictive Control . . . . .</b>	<b>37</b>
2.1	Introduction . . . . .	37
2.2	Scenarios for Design and Analysis . . . . .	37
2.3	Process and AP Model in the Ideal Case . . . . .	39
2.3.1	Example of a Process without Pure Delays. . . . .	40
2.3.2	Example of Process with Pure Time Delays. . . . .	42
2.4	General Description of the Real Case . . . . .	45
2.4.1	Description of the Process . . . . .	45
2.4.2	Description of the AP Model Functions. . . . .	47
2.5	Control Objectives . . . . .	49
2.6	Design from the Perspective of Stability . . . . .	50
2.7	Stability Conditions. . . . .	52
2.8	From Conceptual Knowledge to a Profound Understanding . . .	55

**Exercises of Part I**

**Part II Design of the Driver Block: Basic and Extended Predictive Control Strategies**

<b>3</b>	<b>Basic Strategy of Predictive Control . . . . .</b>	<b>67</b>
3.1	Introduction . . . . .	67
3.2	Basic Strategy of Predictive Control . . . . .	67
3.3	The Model Reference Concept . . . . .	68
3.4	The New Concept of Driver Block . . . . .	69
3.5	The Concept of Projected Desired Trajectory . . . . .	71
3.6	Basic Strategy Application Example . . . . .	73
3.7	The Concept of Driving Desired Trajectory . . . . .	76
3.8	Need for an Extension to the Basic Strategy. . . . .	76
	References. . . . .	81
<b>4</b>	<b>Extended Strategy of Predictive Control . . . . .</b>	<b>83</b>
4.1	Introduction . . . . .	83
4.2	Extended Strategy of Predictive Control. . . . .	84
4.2.1	The Extended Strategy . . . . .	84
4.2.2	Extended Prediction . . . . .	86
4.2.3	Performance Criterion, Projected Desired Trajectory and Control Action . . . . .	87
4.3	Minimization of the Cost Function and Control Law. . . . .	88
4.4	A Particular Solution. . . . .	92

4.5	Illustrative Stability and Robustness Analysis . . . . .	93
4.5.1	Theoretical Analysis: Transfer Functions . . . . .	94
4.5.2	Theoretical Analysis: Stability and Robustness . . . . .	97
4.5.3	Illustrative Example 1 . . . . .	99
4.5.4	Illustrative Example 2 . . . . .	104
4.6	Conclusions . . . . .	107
	References. . . . .	108

**Exercises of Part II**

**Part III Design of the Adaptation Mechanism: Synthesis  
of the Adaptive System**

<b>5</b>	<b>Analysis and Synthesis of the Adaptive System in the Ideal Case. . . . .</b>	<b>127</b>
5.1	Introduction . . . . .	127
5.1.1	The Need for Adaptive Control and First Developments. . . . .	127
5.1.2	Predictive Control and the Approach of Stability . . . .	128
5.1.3	Contents of this Chapter . . . . .	129
5.2	Solution Strategy for the Synthesis Problem. . . . .	129
5.3	Example of Synthesis of the Adaptive System . . . . .	130
5.4	A Priori and A Posteriori Estimation Errors . . . . .	132
5.5	A General Adaptation Expression . . . . .	133
5.6	Convergence of the AP Model Parameters . . . . .	134
5.7	Analysis of the Results . . . . .	135
5.7.1	Stability Analysis . . . . .	135
5.7.2	Identification with a View to Control . . . . .	136
	References. . . . .	137
<b>6</b>	<b>Analysis and Synthesis of the Adaptive System in the Real Case. . . . .</b>	<b>139</b>
6.1	Introduction . . . . .	139
6.2	Real Case with No Difference in Structure. . . . .	140
6.2.1	Solution Strategy . . . . .	140
6.2.2	Example of Solution to the Synthesis Problem . . . . .	142
6.2.3	Properties of the Adaptive System . . . . .	144
6.2.4	Analysis of the Results . . . . .	146
6.3	Real Case with Difference in Structure . . . . .	147
6.3.1	Solution Strategy . . . . .	147
6.3.2	Definition of the Normalized System. . . . .	148
6.3.3	Synthesis of the Adaptation Mechanism. . . . .	150
6.3.4	Properties of the Adaptive System . . . . .	152
6.3.5	Analysis of the Results . . . . .	154

6.4	Real Case with Time Varying Parameters . . . . .	155
6.4.1	Nature of the Problem and Solution Strategy . . . . .	155
6.4.2	Definition of the Adaptive System . . . . .	156
6.4.3	Verification of the Convergence Condition. . . . .	157
6.4.4	Analysis of the Results . . . . .	158
6.5	Conclusions . . . . .	158
	References. . . . .	160

## Exercises of Part III

## Part IV Stability Theory of Adaptive Predictive Control

<b>7</b>	<b>Stability Theory . . . . .</b>	<b>171</b>
7.1	Introduction . . . . .	171
7.2	Input/Output Properties Associated with the Stability Nature of the Process . . . . .	172
7.2.1	Definitions. . . . .	172
7.2.2	Properties. . . . .	174
7.3	Physical Realizability of the Desired Trajectory . . . . .	177
7.4	A Condition for APCS Stability of Processes of a Linear and Stable Inverse Nature . . . . .	177
7.5	Predictive Control of Processes of a Linear and Stable Inverse Nature . . . . .	179
7.5.1	Stability Results . . . . .	179
7.5.2	Analysis of the Results . . . . .	181
7.6	Stability for Adaptive Predictive Control of Processes of a Linear and Stable Inverse Nature . . . . .	181
7.6.1	The Role of Adaptation in the Stability . . . . .	181
7.6.2	General Stability Condition . . . . .	183
7.6.3	Ideal Case . . . . .	185
7.6.4	Real Case with No Difference in Structure. . . . .	186
7.6.5	Real Case with Difference in Structure . . . . .	187
7.6.6	Real Case with Time Varying Parameters . . . . .	189
7.7	APCS Stability of Processes of a Linear and Stable Nature . . .	189
7.7.1	A Condition for Stability . . . . .	189
7.7.2	Predictive Control. . . . .	190
7.7.3	Adaptive Predictive Control . . . . .	192
7.8	APCS Stability of Unstable Processes with an Unstable Inverse . . . . .	194
7.8.1	A Condition for Stability . . . . .	194
7.8.2	Predictive Control. . . . .	194
7.8.3	Adaptive Predictive Control . . . . .	195
7.9	Conclusions . . . . .	196
	References. . . . .	197

## Exercises of Part IV

## Part V Benchmark Applications of Predictive, Adaptive Predictive and Optimized Adaptive Control

<b>8</b>	<b>Multivariable Adaptive Predictive Control of a Distillation Column</b>	<b>213</b>
8.1	Introduction	213
8.2	Practical Issues in APCS Implementation	213
8.2.1	Mathematical Formulation	214
8.2.2	Practical Issues	215
8.2.3	Incremental Choice of the I/O Variables in the AP Model	215
8.2.4	The Delay Matrix and the Non-singularity of $B_1(k)$	216
8.2.5	Choice of the AP Model Order	218
8.2.6	Choice of a Driver Block and a Recursive Estimation Law	219
8.3	Experimental Equipment	219
8.4	AP Control: Sequence of Operations and Design Parameters	222
8.4.1	SISO Top Composition Control	222
8.4.2	SISO Bottom Composition Control	224
8.4.3	MIMO Control	224
8.5	Experimental Results and Discussion	225
8.5.1	Characteristics of the Plant	226
8.5.2	Simplicity of the Adaptive Predictive Control Strategy	228
8.5.3	Choice of the AP Model Order	229
8.5.4	Choice of the Incremental Input/Output Variables	230
8.5.5	Use of the Delay Transformation for MIMO Control	230
8.5.6	Choice of the Adaptation Algorithm	231
8.5.7	Simplicity of the Driver Block Design	232
8.5.8	Use of Limits on the Control Signal	233
8.5.9	Choice of the Initial Parameter Values of the AP Model	233
8.5.10	Performance of the Adaptive Predictive Control Strategy	233
8.5.11	SISO and MIMO Control	234
8.5.12	Regulatory Performance under Stochastic Disturbances	234
8.5.13	Comparison with Conventional PI Control	235
8.6	Conclusions	236
	References	236

<b>9</b>	<b>Control of a Bleach Plant in a Pulp Factory . . . . .</b>	<b>239</b>
9.1	Introduction . . . . .	239
9.2	The Control Problem in a Bleach Plant . . . . .	239
9.3	Extended Strategy of Predictive Control. . . . .	241
9.4	Implementation of AP Control . . . . .	243
9.4.1	Structure of the Implementation . . . . .	243
9.4.2	Design Issues . . . . .	244
9.5	Experimental Results and Discussion. . . . .	245
9.5.1	Tracking and Regulatory Performance. . . . .	248
9.5.2	Inverse Instability and Time Delay Compensation. . . . .	249
9.5.3	Robustness Against Failure in the Data Transmission . . . . .	249
9.5.4	Simplicity of Startup and Use. . . . .	252
9.6	Conclusions . . . . .	252
	References. . . . .	253
<b>10</b>	<b>Active Control of Flexible Structures . . . . .</b>	<b>255</b>
10.1	Introduction . . . . .	255
10.2	Experimental Setup for Aseismic Control. . . . .	255
10.2.1	Description . . . . .	255
10.2.2	Tendon Controller Forces and Dynamic Model. . . . .	258
10.2.3	State Model and Control Problem. . . . .	261
10.3	Implementation of Predictive Control . . . . .	262
10.3.1	Predictive Model . . . . .	262
10.3.2	Control Law. . . . .	263
10.4	Experimental Results and Discussion. . . . .	264
10.4.1	Three-Storey Structure. . . . .	264
10.4.2	Six-Storey Structure . . . . .	269
10.5	Conclusions . . . . .	272
	References. . . . .	272

## **Part VI Technological Realization of ADEX Optimized Adaptive Control Systems**

<b>11</b>	<b>A Software Platform for Adaptive Predictive Expert Control Application . . . . .</b>	<b>275</b>
11.1	From Mathematical Formulation to Generic Application . . . . .	275
11.2	ADEX COP V.1 Software Structure . . . . .	277
11.3	Integration with the Host System . . . . .	278
11.3.1	Integration into the Control Logic. . . . .	278
11.3.2	Implementation of Multivariable ADEX Controllers. . . . .	280
11.3.3	The ADEX Controllers Interface. . . . .	281

11.4	Structure Variables in the AP Domains . . . . .	284
11.4.1	General Considerations . . . . .	284
11.4.2	Process . . . . .	285
11.4.3	Control Block. . . . .	287
11.4.4	Adaptation Mechanism . . . . .	289
11.4.5	Driver Block . . . . .	293
11.5	Expert Domain Structure Variables . . . . .	296
11.5.1	General Remarks . . . . .	296
11.5.2	Process . . . . .	297
11.5.3	Control Block. . . . .	297
11.6	Conclusions . . . . .	298
	References. . . . .	298
<b>12</b>	<b>Application of ADEX COP V.1 to the Biological Process of a Wastewater Treatment Plant . . . . .</b>	<b>299</b>
12.1	Introduction . . . . .	299
12.2	Biological Process Control Challenges. . . . .	300
12.3	Objectives, Controllers and Optimized Control Strategy. . . . .	302
12.3.1	Objectives and ADEX Controllers. . . . .	302
12.3.2	Optimized Control Strategy . . . . .	302
12.4	Configuration of the ADEX Controllers. . . . .	304
12.4.1	Definition of the Controllers Set and Communication with the Host System . . . . .	304
12.4.2	Configuration of the Pressure Controller Structure Variables . . . . .	306
12.4.3	Configuration of the Oxygen Controller Structure Variables in the AP domains . . . . .	310
12.4.4	Configuration of the Oxygen Controller Structure Variables in the Expert Domains. . . . .	314
12.5	Results Obtained. . . . .	316
12.6	Analysis of Results . . . . .	323
12.6.1	Performance of the Previous Control System . . . . .	323
12.6.2	Air Pressure Control . . . . .	324
12.6.3	Dissolved Oxygen Control in the Tanks. . . . .	326
12.6.4	Verification of the Optimized Control Strategy . . . . .	327
12.7	Conclusions . . . . .	327
<b>13</b>	<b>ADEX Optimized Adaptive Control System for the Sulfur Recovery Process at Pemex Cadereyta Refinery . . . . .</b>	<b>329</b>
13.1	Introduction . . . . .	329
13.2	Process Description. . . . .	331
13.2.1	Claus Process. . . . .	331
13.2.2	Plant Layout . . . . .	332
13.2.3	Control Challenges . . . . .	333
13.2.4	Previous Control System . . . . .	333

13.3	Implementation of the ADEX Optimized Adaptive Control System. . . . .	334
13.3.1	ADEX COP V.2. . . . .	334
13.3.2	Multivariable ADEX Controllers. . . . .	335
13.3.3	Communications Architecture. . . . .	336
13.4	Optimized Control Strategies . . . . .	337
13.4.1	Criteria for Optimized Control Strategies . . . . .	337
13.4.2	Optimized Control Strategies for Pressure in the Acid Gas Common Header . . . . .	338
13.4.3	Optimized Control Strategies for $H_2S:SO_2$ Ratio and Flow Rate of Combustion Air . . . . .	339
13.4.4	ADEX Controller Configurations . . . . .	340
13.5	Field Results . . . . .	341
13.5.1	ADEX System Performance . . . . .	341
13.5.2	Comparative Analysis . . . . .	344
13.6	Conclusions . . . . .	346
	References. . . . .	347
<b>14</b>	<b>ADEX Optimized Adaptive Control System for Superheated Steam Temperature in a Coal-Fired Power Plant. . . . .</b>	<b>349</b>
14.1	Introduction . . . . .	349
14.2	Process Description. . . . .	351
14.3	Control Challenges . . . . .	352
14.4	ADEX Controller Module . . . . .	353
14.5	Control Strategy and ADEX Controllers . . . . .	354
14.5.1	Control Strategy . . . . .	354
14.5.2	ADEX Controllers Configuration . . . . .	355
14.6	Phase I: Implementation and Results . . . . .	357
14.7	Phase II: Implementation and Results . . . . .	359
14.8	Conclusions . . . . .	363
	References. . . . .	364
 <b>Part VII Conclusion</b>		
<b>15</b>	<b>Closure: The Strength of the Concepts . . . . .</b>	<b>367</b>
15.1	Evolution of Concepts, Industrial Control Methodologies and Systems. . . . .	367
15.2	The Impact of the New Concepts . . . . .	369
	References. . . . .	370
