

Contents

1	Theory of the Resonant Scattering of Gamma Rays by Nuclei in a Magnetic Field	1
1.1	Introduction	1
1.2	ADRSF Function for the Case Where the Magnetic Field Is Perpendicular to the Plane of Gamma-Ray Scattering	2
1.3	Angular Distribution in the Case Where Magnetic-Field Directions Are Distributed Chaotically Over the Scatterer Volume	17
1.4	Some Particular Cases	22
	References	32
2	Experimental Study of Resonant Gamma-Ray Scattering	35
2.1	Introduction	35
2.2	Measurement of the Angular Distribution of 100.1 keV Gamma Rays Resonantly Scattered by ^{182}W Nuclei	36
2.3	Measurement of the Magnetic Moment of the ^{182}W Nucleus in the 2^+ Excited State at 100.1 keV	42
2.4	Measurement of the Unperturbed Angular Distribution of Gamma Rays Resonantly Scattered by ^{191}Ir Nuclei	47
2.5	Measurements of Magnetic-Field-Perturbed Angular Distributions of 129.4 keV Gamma Rays Resonantly Scattered by ^{191}Ir Nuclei in an Ir-Fe Alloy	52
2.6	Some Special Features of Gamma-Radiation Processes as Suggested by the Foregoing Analysis	69
	References	76
3	Problem of the Resonant Excitation of Long-Lived Nuclear Isomeric States	79
3.1	Small Introduction	79
3.2	Physical Reasons Behind Expected Difficulties in Performing Mössbauer Experiments with Long-Lived Isomers	80

3.3	Early Experiments Performed at ITEP to Study the Mössbauer Excitation of Long-Lived Isomeric States of ^{107}Ag and ^{109}Ag Nuclei	87
3.4	Influence of the Direction of the Magnetic Field in Which the Silver Gamma Source Is Placed on the Probability for Resonant Self-absorption of $^{109\text{m}}\text{Ag}$ -Isomer Gamma Rays in It	94
3.5	Foreign Experiments Devoted to the Observation of Resonant Self-absorption of $^{109\text{m}}\text{Ag}$ -Isomer Gamma Rays in Metallic Silver	100
3.6	Experiments of Our ITEP Group Performed in the Last Years with the $^{109\text{m}}\text{Ag}$ Isomer	103
	References	124
4	Fundamentals of Gravitational Gamma Spectrometry	127
4.1	Design of a Gravitational Gamma Spectrometer Based on the $^{109\text{m}}\text{Ag}$ Isomer	127
4.2	Experiments Performed at ITEP with the Aid of a Gravitational Gamma Spectrometer	132
	References	140
5	Nuclear Resonant Scattering of Annihilation Photons	141
5.1	Introduction	141
5.2	Expected Cross Section	141
5.3	Description of Our Experiments	149
5.4	Data on the Cross Sections for the Rayleigh Scattering of Gamma Rays	155
5.5	First Experiment Aimed at Observing Nuclear Resonant Scattering of Annihilation Photons	157
5.6	Second Experiment in Which the Nuclear Resonant Scattering of Annihilation Photons was Observed	161
5.7	Cross Section for the Resonant Scattering of Annihilation Photons by ^{106}Pd Nuclei	164
5.8	Further Ways Toward Refining Upon the Method for Observing the Process Under Discussion	168
	References	170
6	Small Addition	173
6.1	Manifestations of the Binding Energy of Electrons of Scattering Atoms in the Spectra of Scattered Gamma Radiation	173
6.2	Application of Resonant Gamma Ray Scattering to Determining the Magnetic Moment of the ^{65}Cu Nucleus in the Excited State at 1115.5 KeV	176

6.3	On the Possibility of Applying the Nuclear Resonant Scattering of Annihilation Photons to Studying the Shape of Fermi Surfaces in Metals	182
6.4	Nuclear Resonant Scattering of Annihilation Photons and Problem of the Tunguska Event.	184
	References	185
	Conclusion	187
	Index	189

Advances in Gamma Ray Resonant Scattering and
Absorption

Long-Lived Isomeric Nuclear States

Davydov, A.V.

2015, XI, 192 p. 71 illus., Hardcover

ISBN: 978-3-319-10523-9
