

# Contents

<b>1</b>	<b>Introduction to Nonlinear Vibration and Control</b>	<b>1</b>
1.1	Vibration of Flexible Structures	1
1.2	Causes of Nonlinear Vibration	3
1.2.1	Material Properties	3
1.2.2	Geometric Nonlinearity	6
1.2.3	External Forces and Constraints	7
1.2.4	Freeplay, Backlash, Impact and Friction	9
1.2.5	Control and Delay	11
1.3	Mathematical Models for Vibration	11
1.3.1	Linear Vibration Modelled Using Sine Waves	12
1.3.2	Nonlinear Vibration Modelled Using Sine Waves	17
1.3.3	Multiple Degrees-of-Freedom	20
1.4	Control of Nonlinear Vibrations	25
1.4.1	Feedback Control of Linear Systems	26
1.4.2	Feedback Control of Nonlinear Systems	30
1.5	Continuous Structural Elements	31
1.6	Smart Structures	32
1.7	Chapter Notes	33
	References	34
<b>2</b>	<b>Nonlinear Vibration Phenomena</b>	<b>37</b>
2.1	State Space Analysis of Dynamical Systems	37
2.1.1	Harmonically Forced Linear Oscillator	38
2.1.2	Equilibrium Points	40
2.1.3	Local Linear Approximation Near Equilibrium Points	45
2.2	Systems with Two States	46
2.2.1	Equilibrium Points for Linear Harmonic Oscillator	47
2.3	The Link Between State Space and Mechanical Energy	51
2.3.1	Potential Functions	52
2.4	Multiple Solutions, Stability and Initial Conditions	58
2.4.1	Stability	60

2.5	Periodic and Non-periodic Oscillations . . . . .	61
2.6	Parameter Variation and Bifurcations . . . . .	65
2.6.1	The Onset of Oscillations via a Hopf Bifurcation . . . . .	71
2.6.2	Bifurcations in Forced Nonlinear Oscillations . . . . .	74
2.7	Systems with Harsh Nonlinearities . . . . .	81
2.7.1	Friction Oscillator . . . . .	82
2.7.2	Impact Oscillator . . . . .	84
2.8	Nonlinear Phenomena in Higher Dimensions . . . . .	87
2.8.1	The Fermi-Pasta-Ulam Paradox . . . . .	88
2.8.2	Localization . . . . .	89
2.8.3	Modelling Approaches . . . . .	89
2.9	Chapter Notes . . . . .	91
	References . . . . .	94
<b>3</b>	<b>Control of Nonlinear Vibrations . . . . .</b>	<b>97</b>
3.1	Control Design for Nonlinear Vibrations . . . . .	97
3.1.1	Passive Vibration Control . . . . .	98
3.1.2	Nonlinear Passive Vibration Isolators . . . . .	105
3.2	Semi-active Vibration Control . . . . .	106
3.3	Active Vibration Control . . . . .	110
3.3.1	Observability and Controllability . . . . .	111
3.3.2	Control Law Design . . . . .	113
3.4	Stability Theory . . . . .	115
3.4.1	Lyapunov Functions . . . . .	116
3.4.2	Bounded Stability . . . . .	119
3.5	Linearisation Using Feedback . . . . .	123
3.5.1	Input-Output Linearisation . . . . .	126
3.6	Control of Multi-Degree-of-Freedom Systems . . . . .	130
3.6.1	Modal Control . . . . .	130
3.7	Adaptive Control . . . . .	136
3.7.1	Adaptive Feedback Linearisation . . . . .	136
3.8	Chapter Notes . . . . .	140
	References . . . . .	143
<b>4</b>	<b>Approximate Methods for Analysing Nonlinear Vibrations. . . . .</b>	<b>145</b>
4.1	Backbone Curves . . . . .	145
4.2	Harmonic Balance . . . . .	148
4.2.1	Forced Vibration . . . . .	152
4.3	Averaging . . . . .	154
4.3.1	Free Vibration . . . . .	154
4.3.2	Forced Vibration . . . . .	158
4.4	Perturbation Methods . . . . .	163
4.4.1	Regular Perturbation Theory . . . . .	163
4.4.2	Multiple Scales Method . . . . .	167

4.5	Normal Form Transformations . . . . .	171
4.5.1	Free Vibration . . . . .	172
4.5.2	Higher Order Accuracy . . . . .	184
4.5.3	Forced Vibration . . . . .	187
4.5.4	Steady-State Stability . . . . .	201
4.6	Chapter Notes . . . . .	207
	References . . . . .	208
<b>5</b>	<b>Modal Analysis for Nonlinear Vibration . . . . .</b>	<b>211</b>
5.1	Modal Behaviour in Vibrating Systems . . . . .	212
5.2	Modal Decomposition Using Linear Techniques . . . . .	213
5.2.1	Discrete Linear Systems . . . . .	213
5.2.2	State Space Form for Discrete Linear Systems . . . . .	216
5.2.3	Continuous Linear Systems . . . . .	219
5.3	Modal Decomposition for Nonlinear Systems . . . . .	226
5.3.1	Nonlinear Normal Modes . . . . .	227
5.3.2	Internal Resonance . . . . .	230
5.3.3	The Geometry of Nonlinear Modal Response . . . . .	235
5.4	Backbone Curves from Normal Form Transformations . . . . .	236
5.4.1	Single Mode Backbone Curves . . . . .	237
5.4.2	Multi-mode Backbone Curves and Bifurcations . . . . .	243
5.4.3	Nonlinear Mode Shape Analysis . . . . .	247
5.4.4	Backbone Curves in the Symmetry Breaking Case . . . . .	250
5.5	Application to Larger Scale Systems . . . . .	257
5.6	Chapter Notes . . . . .	257
	References . . . . .	257
<b>6</b>	<b>Beams . . . . .</b>	<b>261</b>
6.1	Small-Deflection Beam Theory . . . . .	261
6.1.1	The Euler-Bernoulli Equation . . . . .	262
6.1.2	The Galerkin Method . . . . .	265
6.1.3	Initial Conditions and Forcing . . . . .	268
6.1.4	Collocation Method . . . . .	271
6.2	Nonlinear Beam Vibration . . . . .	275
6.2.1	Large Deflections of Thin Beams . . . . .	277
6.2.2	Nonlinear Beam Equations with Axial Loading . . . . .	278
6.2.3	Stretching of a Constrained Beam . . . . .	292
6.3	Case Study of Modal Control Applied to a Cantilever Beam . . . . .	299
6.3.1	Modal Control of a Beam . . . . .	299
6.3.2	Vibration Suppression Using Piezoelectric Actuation . . . . .	303
6.3.3	Positive Position Feedback . . . . .	304
6.3.4	PPF for Nonlinear Vibration . . . . .	308
6.4	Chapter Notes . . . . .	310
	References . . . . .	311

<b>7</b>	<b>Cables</b>	313
7.1	Horizontal Cable Vibration	313
7.1.1	Cable Sag	314
7.1.2	Static Deflection Due to Sag	315
7.1.3	Dynamic Deflection	318
7.2	Inclined Cable Vibration	320
7.2.1	Force Balance	321
7.2.2	Strain	322
7.2.3	Excitation	324
7.2.4	Quasi-Static Motion	325
7.2.5	Modal Motion	326
7.3	Nonlinear Cable Dynamics	334
7.3.1	Compatibility	335
7.3.2	Out-of-Plane Motion	336
7.3.3	In-Plane Motion	337
7.3.4	Modal Interaction	341
7.4	Case Study of Analysis of Cable Response	343
7.4.1	Harmonic Balance	344
7.4.2	Averaging	346
7.4.3	Multiple Scales	350
7.4.4	Normal Forms	352
7.5	Case Study of Modal Interaction in Cables	355
7.5.1	Normal Form Analysis of Two Mode Response	355
7.5.2	Backbone Curves for the Cable System	359
7.5.3	Autoparametric Response of the Out-of-Plane Mode	362
7.6	Chapter Notes	367
	References	367
<b>8</b>	<b>Plates and Shells</b>	369
8.1	Vibration of Plates	369
8.1.1	Force Moment Relations	370
8.1.2	Strain-Displacement Relations	374
8.1.3	Stress-Strain Relations	377
8.1.4	Force Balance and Compatibility	379
8.2	Small Amplitude Vibration	381
8.3	Vibration with Axial Loading	386
8.4	Vibration of Shells	392
8.5	Case Study of Nonlinear Shell Vibration	397
8.5.1	Description of Case Study	398
8.5.2	Governing Equations for Composite Shells	399
8.5.3	Galerkin Decomposition	403
8.5.4	Three-Mode Model	405
8.5.5	Subharmonic Resonance	409

8.6 Adaptive Structure Applications. . . . .	413
8.6.1 Multi-form Shell Structures . . . . .	414
8.7 Chapter Notes . . . . .	416
References . . . . .	416
<b>9 Solutions to Problems. . . . .</b>	<b>419</b>
<b>Index . . . . .</b>	<b>447</b>

Nonlinear Vibration with Control  
For Flexible and Adaptive Structures

Wagg, D.; Neild, S.

2015, XI, 453 p. 142 illus., 3 illus. in color., Hardcover

ISBN: 978-3-319-10643-4
