Part I Power Optics Elements (POE) for High Power Lasers

1	Introduction	3
	References	5
2	Static POEs Based on Monolithic Materials	7
2.1	Thermal Stress State of a Body Exposed to Laser Radiation . . .	7
2.2	Continuous-Wave Irradiation	11
2.3	Pulsed Irradiation	15
2.4	Repetitively Pulsed Irradiation	18
2.5	Criteria for the Optical Surface Stability	20
2.6	Irreversible Changes of the Optical Surface	23
	References	23
3	Static OPEs Based on Materials with a Porous Structure	25
3.1	Temperature Field in Porous Structures Under Convective Cooling	25
3.2	Convective Heat Transfer in a Porous Structure	27
3.3	Hydrodynamics of a Single-Phase Flow in a Porous Structure . . .	27
3.4	Effect of the Coolant Inlet and Outlet Conditions on the Hydraulic Characteristics of the POE	29
3.5	Thermal Conductivity of Porous Structures in POEs	29
3.6	Thermal Deformation of POE Optical Surface Based on Porous Structure	30
3.7	Liquid-Metal Coolants in POEs Based on Porous Structures . . .	35
	References	39
4	Adaptive POEs and Optical Systems Based on Them	41
4.1	POEs Based on Porous Structures	43
4.2	Formation of the Adaptive POE Surface Conjugate with Wavefront Distortions	50

4.3	Accuracy of Correction of Initial Aberration of an Adaptive POE	57
4.4	Adaptive Cooled POEs with Magnetostrictive Actuators of Spring Type	61
	References	67
5	Analytical Model of an Adaptive POE in the Form of a Thin Plate with Discrete Actuators	73
6	Iterative Synthesis Algorithm of the Shape of the Adaptive POE Reflecting Surface	81
7	Synthesis of Laser Resonator Configurations as an Inverse Problem in Optics	85
7.1	Resonator with a Given Field	86
7.2	Phase Problem for a Resonator with Two Adaptive POEs	88
7.3	Resonator with an Adaptive and Apodizing POE	90
7.4	Resonator with an Adaptive POE to Generate the Field with a Given Phase or Amplitude Distribution	90
7.5	Inverse Problems in the Approximation of the Perturbation Theory	91
7.6	Resonator with One Adaptive POE for a Laser with a Controlled Output Power	94
	Reference	98
8	High-Power Laser Beam Coupler Using a Phase Diffraction Grating	99
8.1	Statement of the Problem	99
8.2	Diffraction of Light by a Phase Grating	99
8.3	Selection of Diffraction Coupler Parameters	102
8.4	Testing of the Diffraction Coupler	104
	References	105
9	Optical Coatings	107
9.1	Optical Coatings Based on Intermetallic Compounds	107
9.2	Optical Dielectric Coatings	111
	References	112
10	POEs Based on Highly Porous Cellular Materials	113
	Reference	117
11	Large POEs Based on Multilayer Honeycomb Structures	119
	References	121

12 Large POEs Based Composite Materials	123
References	125
13 Power Optics and Its New Applications	127
13.1 Cooling of Laser Diode Assemblies.	127
13.2 New Generation Power Optics Based on Silicon Carbide	129
References	130

Part II High Repetition Rate Lasers and New Applications

14 High Repetition Rate High-Power Wide-Aperture Lasers	133
14.1 Introduction	133
14.2 Substantiation of Resonator Design	134
14.3 Theoretical Laser Model and Results of Numerical Analysis	136
14.4 Experimental Results	140
14.5 Conclusions	143
References	143
15 Mono-module Disk Laser	145
15.1 Introduction	145
15.2 Disk and Fiber Lasers.	146
15.3 Design and Physical Foundations of Disk Laser Operation.	147
15.4 Laws of Scaling of Disk Lasers	149
15.5 Regenerative Amplification of Pulses	151
15.6 Prospects for Scaling the Power of Disk Lasers.	153
15.7 Conclusions	154
References	155
16 Pulse-Periodic Lasers for Space Debris Elimination	157
16.1 High Repetition Rate P–P Mode of Laser Operation	157
16.2 New Application for Space.	159
16.3 Conclusion	164
References	165
17 High Power Lasers for New Applications	167
17.1 Lightnings.	167
17.2 Lightning in the Natural Capacitor “Earth–Cloud”	169
17.3 Lightning in the Natural Capacitor “Cloud–Ionosphere”.	174
17.4 Orbital Electrical Socket	177
17.5 Space Flights by Laser Light	178
17.6 Spark Parameters for LJE.	182
17.7 Mechanism of Shock Waves Resonance Association.	183

17.8	LJE on the Basis of Shock Waves Resonance Association for MR	184
17.9	Resonance Properties of System “Laser-KA”	185
17.10	Lightning Protection System	186
17.11	New Approaches for Conductive Channel Creation.	188
17.12	Conclusion	192
	References	192
18	Jet Engine Based Mobile GDL—CO₂ for Water Surface Cleaning . . .	195
18.1	Introduction	195
18.2	The Substantiation of Selection of Laser Type According to Specific Parameters, Operation Autonomy and Mobility.	197
18.2.1	Analysis of Applicability of Various Types of Lasers to the Task.	198
18.2.2	Substantiation of Selection Gas Dynamic CO ₂ -Laser	201
18.3	Selection and Substantiation of Basic Performances of the Laser Installation and GDL Principal Diagram	203
18.3.1	Selection of Optimal Radiation Power of GDL	204
18.3.2	Selection of the GDL Scheme and Its Substantiation	207
18.3.3	Selection of Fuel for Mobile GDL	211
18.4	Selection of the Power Installation for GDL	216
18.4.1	Selection of a Schematic of the Power Installation	216
18.4.2	Selection of the Aviation Gas-Turbine Engine	219
18.4.3	Gas Dynamic Assessment of the Chosen Aero-engine as the Power Unit for Mobile GDL	221
18.4.4	Design Solution for GDL Power Unit on the Basis of the Gas-Turbine Engine	224
18.5	The Mobile Laser Installation	227
18.5.1	The Pneumahydraulic Scheme of Laser Installation	227
18.5.2	GDL—General Design Features	229
18.5.3	Main GDL Assemblies	233
18.5.4	Exhaust Device of the Laser Installation	243
18.5.5	Other Systems and Aggregates of the Laser Installation	245
18.5.6	GDL Installation	246
18.6	Conclusion	248
	References	249
19	High Power Lasers as a Weapon	251
19.1	Introduction	251
19.1.1	Myth 1. “Combat Lasers have been Developed for Four Decades with no Progress in Sight.”	252
19.1.2	Myth 2. “Lasers Cannot be Used for a Long Time, Usually they Work Several Seconds.”	254

19.1.3	Myth 3. “Energy of Laser Weapons is Negligible Compared to the Fire Arms.”	254
19.1.4	Myth 4. “Efficiency of Lasers is a Few Percent.”	255
19.1.5	Myth 5. “The Laser Beam has a Huge Diffraction Divergence.”	255
19.1.6	Myth 6. “One can Easily be Protected from Laser Weapons Using, for Example, an Aluminum Mirror.”	256
19.1.7	Myth 7. “The Problem of Overheating of Lasers Cannot be Solved.”	257
19.1.8	Myth 8. “High-Power and Compact Energy Sources for Combat Lasers do not Exist.”	258
19.1.9	Myth 9. “Every Shot a Laser is Worth Millions of Dollars.”	258
19.1.10	Myth 10. “All the Problems that can be Solved with Laser Weapons, are Easier and Cheaper to Solve by Traditional Means.”	259
19.2	Conclusion	259
