

Contents

1	Survey of Nonlinear Optical Materials	1
1.1	Introduction	1
1.2	Some Important Nonlinear Optical Processes	3
1.2.1	Second-Order NLO Processes	3
1.2.2	Third-Order NLO Processes	5
1.2.3	Other NLO Processes	6
1.3	Nonlinear Optical Materials	6
1.4	Conversion Factors	7
	References	8
2	Quantum-Mechanical Treatment of Responses to Electric Fields—Molecular Systems	9
2.1	Introduction	9
2.2	Clamped Nucleus Sum-Over-States Electronic (Hyper)polarizabilities	11
2.3	Time-Dependent Hartree-Fock and DFT (Clamped Nucleus) Electronic Properties	12
2.4	Solving the TDHF and TDDFT Equations	17
2.5	Vibrational Linear and Nonlinear Polarizabilities	20
	References	26
3	Quantum-Mechanical Treatment of Responses to Electric Fields—Extended Systems	29
3.1	Introduction	29
3.2	The Choice of the Gauge: Scalar and Vector Potentials	30
3.3	Thermodynamic Limit	31
3.4	Infinite Periodic Systems in Static and Dynamic Electric Fields	34
3.5	TDHF and TDDFT Equations for Infinite Periodic Systems	40
	References	41

4	The Elongation Method	43
4.1	Introduction	43
4.2	Localization Scheme for the Elongation Method	45
4.3	ELG-SCF	49
4.4	ELG-CUTOFF Method	50
4.5	Results for Quasi-One-Dimensional Systems with Large Unit Cells	51
4.6	Generalized Elongation (G-ELG) Method	53
4.7	Some Applications of the G-ELG Method	55
4.7.1	Cyclic Array of Meso-Meso Linked Porphyrins	55
4.7.2	Por-(nT)-C ₆₀ Wire-Systems	56
4.8	ELG-LMP2 Method	59
4.9	ELG-LCIS Method	61
	References	63
5	Applications of the Elongation Method to NLO Properties	67
5.1	Introduction	67
5.2	ELG-FF Method	67
5.3	ELG-CPHF/CPKS Method	69
5.4	Examples of Applications of ELG-FF and ELG-CPHF	72
5.4.1	Linear Array of Meso-Meso Linked Porphyrins	72
5.4.2	Water Chain Model System	80
	References	81
6	Future Prospects	85
	Glossary	87
	Index	91

Calculations on nonlinear optical properties for large systems

The elongation method

Gu, F.L.; Aoki, Y.; Springborg, M.; Kirtman, B.

2015, XVI, 93 p. 18 illus., 14 illus. in color., Softcover

ISBN: 978-3-319-11067-7
