

Contents

1	Introduction	1
1.1	Coating Processes Compatible with High-Voltage Devices	2
1.2	Monograph Overview	3
1.3	Plasma Diagnostics and Measurements	4
1.4	Process Control Considerations	4
1.5	Monograph Organization	4
	References	5
Part I	Vacuum Systems Infrastructure and Chamber Design	7
2	Vacuum Chamber Design	9
2.1	Introduction	10
2.2	Vacuum Chamber Design Considerations	10
2.3	Chamber Material Selection	13
2.3.1	Material Outgassing	13
2.3.2	Vacuum Welds, Gaskets, and Attachments	14
2.3.3	Vacuum Chamber Isolation	14
2.4	Vacuum Components Selection	15
2.4.1	High-Vacuum Pumping System	15
2.4.2	Vacuum Measurement System Selection	15
2.4.3	Vacuum System Safety Interlocks	16
2.5	Case Study: Chamber Vibration Isolation and Measurement	17
2.5.1	Vibration Transmissibility Design	17
2.5.2	Accelerometer Response Comparison	21
2.6	Case Study Continued: Optimum Chamber Design	24
2.6.1	Design Optimization Analysis	25
2.6.2	Compare Optimum Designs	30
2.7	Assembly and Cleaning	31

2.8	Residual Gas Analysis	32
2.8.1	Establishing Chamber Baseline	32
2.8.2	Helium Leak Check	33
2.9	System Commissioning	33
	References	34
3	Rolling Contact Testing of Ball Bearing Elements	35
3.1	Introduction	36
3.2	Analysis of Rolling Contact in Vacuum	39
3.2.1	Calculations of Contact Stress	39
3.2.2	Contact Load Versus Cycles	46
3.3	Rolling Contact Wear	46
3.3.1	Empirical Approach	47
3.3.2	Thermodynamic Approach to Friction and Wear	49
	References	51
4	Rolling Contact Fatigue in High Vacuum	53
4.1	Introduction	54
4.2	Rolling Contact Fatigue Test Platform	55
4.2.1	Test Configuration in Oil	59
4.2.2	Test Configuration in Vacuum	60
4.2.3	Rolling Elements in Vacuum	61
4.3	Rolling Contact Fatigue Vacuum Test	64
4.3.1	Coated Rolling Elements in Vacuum	64
4.3.2	Test Assembly in Vacuum Chamber	65
4.3.3	RCF Test Failure Criterion	65
4.3.4	Analysis Tools	66
4.3.5	RCF Test Results	70
4.3.6	Post-Test Autopsy of Contacting Elements	72
4.3.7	Post-Test Elemental Content of Film	76
4.4	Friction and Wear Calculations	78
4.4.1	Third-Body Transfer Mechanism	78
4.4.2	Empirical Comparison: Lundberg–Palmgren Model	82
	References	85
5	Coating Thickness Calculation and Adhesion	87
5.1	Thickness Measurement Techniques	88
5.1.1	Calculate Thickness by Weight	89
5.1.2	Thickness Measurement Using XRF Spectrometry	91
5.2	Pretest Adhesion Check	92
5.2.1	Scratch Test Ball Sample	92
5.2.2	Particulate Detection Tape Testing	93
5.3	Closing Comments	95
	References	95

Part II Simulation and Testing of Thin Films in a Vacuum Environment	97
6 Ion-Plating Process Model	99
6.1 Plasma and Deposition Processes	101
6.2 Postdeposition Fatigue Testing	103
6.3 Plasma-Assisted Deposition	105
6.4 Coating Procedure for RCF Testings	107
6.5 Plasma Effects on Coating Thickness	109
6.6 Analysis of Extreme DoE Coating Tests	110
6.7 RCF Testing of Extreme DoE Coated Balls	112
6.8 Ion-Plating Model in Simulink TM	114
6.8.1 Cathode dc-Sheath Model	115
6.8.2 Sputter and Evaporation-Sputter Deposition Models	116
6.8.3 Elements of the Ion-Plating Simulation Model	118
6.9 Process Model Simulation	120
References	125
7 Effects of Process Parameters on Film RCF Life	127
7.1 Plasma Diagnostic Tool	128
7.1.1 Langmuir Probe Experimental Procedure	129
7.1.2 Choosing an Appropriate Diagnostic Model	131
7.1.3 Correct Interpretation of Langmuir Probe Data	132
7.2 Plasma Effects on Film Properties and Composition	135
7.2.1 Ion and Elemental Mixing	135
7.2.2 Auger Electron Spectroscopy Test	135
7.2.3 Ion and Element Implantation Modeling	136
7.3 Film Properties Calculation	137
7.3.1 Layered Film Structure Properties	138
7.3.2 Film-Stress Calculation	139
References	144
Part III Control and Disturbance-Rejection of Thin Film Deposition Systems	145
8 Real-Time Process Control	147
8.1 Experimental Setup Using Simulink Real Time	147
8.2 Plant Model Characterization	149
8.2.1 Conductance Valve Characterization	151
8.2.2 Manometer and Plasma-Current Response	153
8.3 Process Control Using Plasma Current	155
Reference	155

9 Closing Chapter: Disturbance Rejection	157
9.1 System Identification	158
9.2 Model Predictive Control	162
9.3 Closing Comments and Future Testing	164
References	164
Index	165

Rolling Contact Fatigue in a Vacuum
Test Equipment and Coating Analysis

Danyluk, M.; Dhingra, A.

2015, XII, 167 p. 80 illus., 77 illus. in color., Hardcover

ISBN: 978-3-319-11929-8
