Contents

1 Electrostatics Models for Biology 1
Ivan Sazanavets, Andrew Cawley and Jim Warwicker

2 Classical Density Functional Theory of Ionic Solutions 17
Jan Forsman, Clifford E. Woodward and Ryan Szparaga

3 A Comprehensive Exploration of Physical and Numerical Parameters in the Poisson–Boltzmann Equation for Applications to Receptor–Ligand Binding 39
Jesper Sørensen, Marcia O. Fenley and Rommie E. Amaro

4 The Adaptive Cartesian Grid-Based Poisson–Boltzmann Solver: Energy and Surface Electrostatic Properties 73
Alexander H. Boschitsch and Marcia O. Fenley

5 Efficient and Stable Method to Solve Poisson–Boltzmann Equation with Steep Gradients 111
Beibei Huang and Vladimir A. Baulin

6 Boundary-Integral and Boundary-Element Methods for Biomolecular Electrostatics: Progress, Challenges, and Important Lessons from CEBA 2013 121
Jaydeep P. Bardhan

7 The Accuracy of Generalized Born Forces 143
Federico Fogolari, Alessandra Corazza and Gennaro Esposito

8 State-of-the-Art and Perspectives of Geometric and Implicit Modeling for Molecular Surfaces 157
Giuseppe Patané and Michela Spagnuolo

9 Triangulating Gaussian-Like Surfaces of Molecules with Millions of Atoms 177
Sérgio E.D. Dias and Abel J.P. Gomes

10 Building and Analyzing Molecular Surfaces: A Tutorial on NanoShaper 199
Sergio Decherchi and Walter Rocchia

11 The Representation of Electrostatics for Biological Molecules 215
Monica Zoppè and Tiziana Loni

12 Using Structural and Physical–Chemical Parameters to Identify, Classify, and Predict Functional Districts in Proteins—The Role of Electrostatic Potential 227
Goran Neshich, Izabella Agostinho Pena Neshich, Fabio Moraes, Jose Augusto Salim, Luiz Borro, Inacio Henrique Yano, Ivan Mazoni, Jose Gilberto Jardine and Walter Rocchia

13 Evaluation of Protein Electrostatic Potential from Molecular Dynamics Simulations in the Presence of Exogenous Electric Fields: The Case Study of Myoglobin 255
P. Marracino, M. Casciola, M. Liberti and F. Apollonio

14 Self-Inclusion Complexes of Monofunctionalized Beta-Cyclodextrins as Host–Guest Interaction Model Systems and Simple and Sensitive Testbeds for Implicit Solvation Methods 271
Rosa Maria Vitale and Pietro Amodeo

15 Modeling Protein–Ligand Interaction with Finite Absorbing Markov Chain 297
Marcin Pacholczyk, Damian Borys and Marek Kimmel

Springer

Computational Electrostatics for Biological Applications
Geometric and Numerical Approaches to the Description of Electrostatic Interaction Between Macromolecules

Rocchia, W.; Spagnuolo, M. (Eds.)

2015, XII, 306 p. 92 illus., 73 illus. in color., Hardcover
ISBN: 978-3-319-12210-6
