

Contents

1	Introduction	1
1.1	Anatomy of the Heart	3
1.2	Physiology of the Heart	5
1.2.1	Cardiomyocytes	7
1.2.2	Cell-to-Cell Coupling	9
1.3	Structural Heterogeneity	10
1.4	Arrhythmias	11
1.5	Antiarrhythmic Therapies	12
1.6	Complexity in Structure and Dynamics	14
1.7	This Thesis	15
	References	18
2	Methods	25
2.1	Mathematical Background	25
2.1.1	Single Cell Dynamics	26
2.1.2	Bi-domain Description of Cardiac Tissue	28
2.1.3	Mono-domain Descriptions of Cardiac Tissue	30
2.1.4	Anisotropy	33
2.1.5	The Phase-Field Method	33
2.1.6	Models	42
2.1.7	Spiral Tips and Phase Singularities	48
2.1.8	Lyapunov Stability Analysis	50
2.2	Numerical Implementation	58
2.2.1	Time Stepping Scheme	58
2.2.2	Diffusion Term	59
2.2.3	Boundary Conditions	64
2.2.4	Stability Considerations	65
2.2.5	Spiral Tip Detection	67
2.2.6	Lyapunov Exponents and Vectors	68
2.2.7	Hardware, Software, Parallelization	71

2.3	Experimental Methods	73
2.3.1	Setup and Tissue Preparation	73
2.3.2	Optical Imaging	74
2.3.3	Electric-Field Stimulation Experiments	76
2.3.4	Signal Processing: Activation Maps	77
	References	80
3	Results.	85
3.1	Quantification of Dynamical Complexity in Heterogeneous Excitable Media	85
3.1.1	Plane Waves	86
3.1.2	Rigidly Rotating Spiral Waves	93
3.1.3	Multiple Spiral Waves	96
3.1.4	Transition to Meandering	99
3.1.5	Circular Heterogeneities	102
3.1.6	Random Heterogeneities	106
3.1.7	Heterogeneities in Spatio-Temporal Chaos	111
3.1.8	Brief Summary	117
3.2	Sensitivity of Curved Tissue Boundaries to Electric-Field Stimulation	119
3.2.1	Theoretical Framework	120
3.2.2	Setup of Numerical Simulations	121
3.2.3	Generic Properties of Induced Membrane Potential Changes	122
3.2.4	Tissue Domains of Different Dimension	123
3.2.5	Curvature Dependence in Cell Culture Experiments	124
3.2.6	Definition of Boundary Curvature	125
3.2.7	Flat Boundaries	127
3.2.8	Circular Boundaries	128
3.2.9	Semi-circular Protuberances	135
3.2.10	Parabolic Boundaries	136
3.2.11	Inherently Three-Dimensional Boundaries	139
3.2.12	Boundary Effects in Full Numerical Simulations	140
3.2.13	Influence of Finite Pulse Duration	142
3.2.14	Brief Summary	149
3.3	Heterogeneity-Induced Wave Sources in Low-Energy Defibrillation	150
3.3.1	Hypothesis	150
3.3.2	Theoretical Framework	151
3.3.3	Blood Vessel Size Distributions	156
3.3.4	Activation Times	157
3.3.5	Linking Structure and Function	159

3.3.6	Universality of Activation Time Scaling	163
3.3.7	Brief Summary	165
	References	167
4	Conclusion	171
4.1	Summary	171
4.2	Discussion and Outlook	175
4.3	Concluding Remarks	182
	References	184
	Appendix A: Modeling Details	187
	Appendix B: Supplementary Data	191
	Appendix C: MediaSim—An Open Framework for Simulating Extended Systems	195
	Curriculum Vitae	197
	Index	203

Complex Structure and Dynamics of the Heart

Bittihn, P.

2015, XV, 204 p. 69 illus., 47 illus. in color., Hardcover

ISBN: 978-3-319-12231-1
