

Contents

1	Iteratively Regularized Gauss-Newton Methods Under Random Noise	1
	Mikhail Yu. Kokurin and Anatoly B. Bakushinsky	
2	Methods of Quantitative Reconstruction of Shapes and Refractive Indices from Experimental data	13
	Larisa Beilina, Nguyen Trung Thành, Michael V. Klibanov and John Bondestam Malmberg	
3	A Posteriori Error Estimate in the Lagrangian Setting for an Inverse Problem Based on a New Formulation of Maxwell's System	43
	John Bondestam Malmberg	
4	Determination of Permittivity from Propagation Constant Measurements in Optical Fibers	55
	Evgenii Karchevskii, Alexandr Spiridonov and Larisa Beilina	
5	Eigenmodes of Linearised Problems of Scattering and Generation of Oscillations on Cubically Polarisable Layers	67
	Lutz Angermann, Yuri V. Shestopalov and Vasyl V. Yatsyk	
6	Time Resolution in Transient Kinetics	81
	Soheil Soltani, Ronnie Andersson and Bengt Andersson	
7	Reconstruction of Dielectric Constants in a Cylindrical Waveguide .	97
	Larisa Beilina and Anders Eriksson	
8	Time-adaptive FEM for distributed parameter identification in mathematical model of HIV infection with drug therapy	111
	Larisa Beilina and Irina Gainova	

9	The Layer-Stripping Algorithm for Reconstruction of Dielectrics in an Optical Fiber	125
	Larisa Beilina and Evgenii Karchevskii	
10	Simultaneous Reconstruction of Maxwell's Coefficients from Backscattering Data	135
	L. Beilina, M. Cristofol and K. Niinimäki	
11	On the Solution of Forward and Inverse Problems of Voltammetry .	153
	Nikolay Koshev	

Inverse Problems and Applications

Beilina, L. (Ed.)

2015, X, 164 p. 44 illus., 41 illus. in color., Hardcover

ISBN: 978-3-319-12498-8
