

Contents

1	Introduction: The End of an Era	1
1.1	(Mis)measuring the Wealth of Nations	4
1.2	Nations at Risk	6
1.3	Understanding the Biophysical Economy	6
1.3.1	Coupling Between Energy and the Economy	7
1.3.2	Stalled Growth Is Related to Nonrenewable Stocks	12
1.3.3	Stalled Growth Is Related to Capital Stock	16
1.4	Consumption-Driven Solutions Are Unsustainable	17
1.5	Change Is Needed!	18
	References	20
2	Accounting for the Wealth of Nations	23
2.1	Three Eras	24
2.1.1	Era of Abundance	24
2.1.2	Era of Energy Constraints	27
2.1.3	Age of Resource Depletion	31
2.2	The Economy is Society's Metabolism	32
2.2.1	Anabolism (Capital Formation)	34
2.2.2	Catabolism (Energy Production)	35
2.2.3	Autophagy (Recycling)	35
2.2.4	Issues of Scale	36
2.2.5	Benefits of the Metabolism Metaphor	38
2.3	New National Accounting	39
2.4	Structure of the Book	41
	References	41

Part I Material and Energy

3	Stocks and Flows of Materials	47
3.1	Methodology	50
3.1.1	Accounting in Everyday Life	50
3.1.2	Product, Resource, Short-lived, and Capital Flows	52

3.2	Example A: Single-Sector Economy	54
3.3	Example B: Two-Sector Economy	61
3.4	Example C: Three-Sector Economy	67
3.5	Materials in the US Auto Industry	73
3.6	Summary	76
	References	76
4	Flows of Direct Energy	79
4.1	Methodology	80
4.2	Example A: Single-Sector Economy	81
4.3	Example B: Two-Sector economy	84
4.4	Example C: Three-Sector Economy	87
4.5	Direct Energy in the Auto Industry	89
4.6	Summary	89
	References	90
5	Stocks and Flows of Embodied Energy	91
5.1	Methodology	93
5.1.1	Total Energy Accounting	93
5.1.2	Embodied Energy Accounting	95
5.2	Example A: Single-Sector Economy	96
5.2.1	Simplification of the Embodied Energy Accounting Equation	96
5.2.2	Substitution of First Law into the Embodied Energy Accounting Equation	98
5.2.3	Physical Depreciation	99
5.3	Example B: Two-Sector Economy	100
5.4	Example C: Three-Sector Economy	103
5.5	Embodied Energy in the US Auto Industry	105
5.6	Summary	107
	References	107
 Part II Economic Value and Energy Intensity		
6	Stocks and Flows of Economic Value	111
6.1	Subjective Theory of Value	111
6.2	Methodology	114
6.3	Example A: Single-Sector Economy	115
6.3.1	Economic Transactions (\dot{X}_{11} and \dot{X}_1)	117
6.3.2	Value Added (\dot{X}_{add})	117
6.3.3	Value Destruction (\dot{X}_{dest})	118
6.3.4	GDP	118
6.4	Example B: Two-Sector Economy	119
6.5	Example C: Three-Sector Economy	119
6.6	Stocks and Flows of Economic Value in the US Auto Industry	122

6.7	Summary	125
	References	125
7	Energy Intensity	127
7.1	Background	127
7.2	Methodology	132
7.3	Example A: Single-Sector Economy	133
7.4	Example B: Two-Sector Economy	134
7.5	Example C: Three-Sector Economy	135
	7.5.1 Total Energy Accounting Equation	135
	7.5.2 Matrix Formulation	136
7.6	What is Endogenous?	139
7.7	Choice of Energy Input Vector	140
7.8	Energy Intensity in the US Auto Industry	141
7.9	Summary	143
	References	143
 Part III Implications and Summary		
8	Implications	147
8.1	Metrics	147
8.2	Implications for the I–O Method	148
	8.2.1 Product-Based vs. Physical Approaches	149
	8.2.2 Capital Flows and Stock	150
	8.2.3 Energy Input from Society	155
	8.2.4 Recommendation	155
8.3	Implications for Economic Growth	157
8.4	Implications for Recycling, Reuse, and Dematerialization	159
8.5	Comparison to a Steady-state Economy	160
	8.5.1 Constant Level of Capital Stock	161
	8.5.2 Constant Material Throughput	162
	8.5.3 Constant GDP	163
8.6	Summary	164
	References	165
9	Next Steps	167
	Reference	169
 Appendix A Value Flows for the US Auto Industry		173
 Appendix B Infinite Series Representation of Energy Intensity		177
 Appendix C Proof of Eq. 7.31		179
 Appendix D Estimating the Input–Output Matrix (A)		181

Appendix E Column vs. Row Vectors in Energy Intensity Equations	183
Glossary	185
Bibliography	187
Index	199

Beyond GDP

National Accounting in the Age of Resource Depletion

Heun, M.K.; Carbajales-Dale, M.; Haney, B.R.

2015, XXVII, 201 p. 41 illus., 26 illus. in color., Hardcover

ISBN: 978-3-319-12819-1
