

Contents

1	Introduction	1
1.1	A Biophysical Perspective	1
1.2	Neoclassical Growth Theory	3
1.3	Methodological Approach: Relation to Existing Theory	5
1.3.1	The Biophysical Critique	6
1.3.2	The Functional Form Critique	7
1.3.3	The Measurement Critique	9
1.3.4	An Unorthodox Approach	11
1.4	Goals and Book Layout	13
	References	14
2	Decoupling	17
2.1	Natural Resources in Neoclassical Growth Theory	18
2.2	Measuring Decoupling	19
2.3	Problems with Real GDP	22
2.4	Decoupling: Fact or Artifact?	29
2.5	Decoupling in Theory and Reality: What Goes Wrong	38
2.6	Conclusions: Monetary Value as a Feedback	40
	References	42
3	Distribution	45
3.1	Measuring Growth	46
3.2	Functional Distribution	48
3.3	Debtor/Creditor Distribution	51
3.4	Personal Distribution	56
3.5	Conclusions: Distribution Matters	59
	References	60
4	Institutional Size	63
4.1	Institutions in Neoclassical Growth Theory	63
4.2	Theories of Large Institutions	67
4.2.1	Theories of the Firm	67

4.2.2 Theories of Government Size	69
4.3 Institutional Size and the Growth of Energy Consumption: Empirical Evidence	72
4.4 The Importance of Hierarchy	75
4.5 Conclusions: Size Matters	81
References	82
5 Labor Structure	85
5.1 Labor in Neoclassical Growth Theory	86
5.2 Theories of Labor Structure Change	87
5.3 Three Hypotheses	90
5.4 Modelling Changes in Labor Structure	94
5.5 Labor Structure and Energy: Empirical Evidence	101
5.6 Conclusions: Labor Structure Matters	105
References	106
6 Toward a Biophysical Growth Theory	109
6.1 The Problem with Neoclassical Growth Theory	109
6.2 A Biophysical Approach	111
6.3 Stylized Biophysical Facts	113
6.4 Conclusions	114
References	116
Appendix A US Sectors: Methodology and Sources	119
Index	123

Rethinking Economic Growth Theory From a Biophysical
Perspective

Fix, B.

2015, XII, 125 p. 39 illus., 32 illus. in color., Softcover

ISBN: 978-3-319-12825-2
