

Contents

1	Basic Principles	1
1.1	Exercises	2
	Further Readings	3
2	Electrodynamic Force	5
2.1	Electric Charges at Rest—Electric Force	5
2.2	Uniform Motion—Magnetic Force	7
2.2.1	Electric Current	7
2.2.2	Measurement of Parallel Motion	8
2.2.3	Measurement of Perpendicular Motion	9
2.2.4	Magnetic Force for General Uniform Motion	11
2.2.5	Evaluation of the Magnetic Force Formulas	15
2.3	Accelerated Motion—Inductive Force	17
2.4	Summary	21
2.5	Exercises	22
	Further Readings	31
3	Electrodynamic Energy	33
3.1	Electric Energy	34
3.2	The Voltage Source	35
3.3	Magnetic Energy	36
3.3.1	Magnetic Force from Magnetic Energy	39
3.4	General Inductance—Interaction Between Two Current Elements	40
3.5	Faraday-Henry's Induction Law	41
3.6	Electrodynamic Force—Updated	42
3.7	Summary	42
3.8	Exercises	43
	Further Reading	46

4	Macroscopic Systems of Unbound Charges	47
4.1	Electric Dynamics	48
4.1.1	Electrically Charged Wire and Point Charge	48
4.1.2	Force Between Two Electrically Charged Wires	49
4.1.3	Force Between a Point Charge and an Electrically Charged Plate	50
4.1.4	Electric Force Between a Point Charge and a Charged Sphere	52
4.1.5	Capacitor and Capacitance	54
4.1.6	Electric Energy Stored in a Capacitor	56
4.1.7	Electric Force Between Two Charged Plates	57
4.2	Magnetic Dynamics	59
4.2.1	Magnetic Force Between a Point Charge and a Long Straight Current	59
4.2.2	Magnetic Force Between Point Charge and Large Current-Carrying Plate	60
4.2.3	Magnetic Force Between a Straight Conductor and a Large Plate	61
4.2.4	Magnetic Force and Energy Between Two Parallel Current-Carrying Plates	62
4.2.5	Inductance	63
4.2.6	Induction in a Moving Rod Interacting with Current-Carrying Plate	71
4.3	Summary	72
4.4	Exercises	74
	Further Readings	77
5	Conductors and Resistive Effects	79
5.1	The Metal as a Conductor	80
5.2	Relaxation Time	80
5.3	Resistance	82
5.4	Heat Power	83
5.5	The Principle of Charge Conservation	84
5.6	Summary	85
5.7	Exercises	85
	Further Reading	91
6	Electric Circuits	93
6.1	Measurement of Capacitance Using an RC Circuit	93
6.2	Measurement of Inductance Using an RL Circuit	94
6.3	The Oscillation Circuit	95
6.3.1	The RLC Circuit with Constant Input Voltage	95
6.3.2	Forced Oscillation Circuit	97
6.3.3	Impedance	99

6.4	Summary	100
6.5	Exercises	101
	Further Readings	103
7	Electric and Magnetic Dipoles	105
7.1	Electric Dipole	105
7.1.1	Interaction Between Dipole and Point Charge.	107
7.1.2	Dipole-Dipole Interaction.	108
7.1.3	Interaction Between a Charged Plate and a Dipole . . .	109
7.1.4	Generalized Electric Dipole Moment	110
7.2	Magnetic Dipole	111
7.2.1	Interaction Between a Magnetic Dipole and a Large Current-Carrying Plate	113
7.2.2	Induced Voltage in a Rotating Loop Interacting with a Current-Carrying Plate	115
7.2.3	Generalized Magnetic Dipole Moment—Interaction Between Rotating Cylinders	116
7.3	Summary	118
7.4	Exercises	119
	Further Readings	128
8	Material Properties	129
8.1	Electric Response Forces	129
8.1.1	Electric Force Between a Charged Capacitor and a Material	131
8.1.2	The Dielectric Constant—Not a Constant.	134
8.1.3	Bound Charges.	135
8.1.4	Three Examples of Polarisation	138
8.2	Magnetic Response Forces	142
8.2.1	Magnetization Currents	144
8.2.2	Magnetization from a Magnetic Influence	147
8.3	General Multipole Interactions	157
8.4	Measurement of Electric and Magnetic Material Properties.	157
8.4.1	Measurements on Solids	158
8.4.2	Measurements on Liquids	158
8.5	Summary	161
8.6	Exercises	163
	Further Readings	172
9	Motional Consequences	173
9.1	Modelling the Electrodynamical Interaction	174
9.2	Magnetism as a Motional Consequence	174
9.3	Induction as a Motional Consequence	176

9.4	Special Theory of Relativity	177
9.4.1	Relative Motion	177
9.4.2	Time Dilation	179
9.4.3	Relativistic Momentum	180
9.4.4	Relativistic Energy	181
9.5	Summary	183
9.6	Exercises	184
	Further Readings	193
10	Field Theory	195
10.1	The Concept of a Field	195
10.2	The Electric and the Magnetic Fields	196
10.3	Dipoles	197
10.4	Material Effects	198
10.5	Boundary Conditions	200
10.5.1	General Vector Field	200
10.5.2	Divergence and Curl for Static Electric and Magnetic Fields	203
10.5.3	Boundary Conditions for Static Electric and Magnetic Fields	206
10.6	Maxwell's Equations	207
10.6.1	Accelerating Charges—The Time Variation of the Magnetic Field	207
10.6.2	The Continuity Equation—Time Variation of Electric Field	209
10.7	Potentials	210
10.8	Power Transportation—The Poynting Vector	210
10.9	Summary	212
10.10	Exercises	214
	Further Readings	217
11	Antenna Theory—The Loop and the Dipole	219
11.1	The Loop Antenna	220
11.2	The Dipole Antenna	222
11.2.1	The Oscillating Electric Dipole	223
11.2.2	The Inductive Force	227
11.2.3	Total Force	227
11.3	Antenna Array	228
11.4	Power Transmission	229
11.4.1	The Dipole Antenna	230
11.4.2	The Loop Antenna	231
11.5	The Wave Concept	232

11.6 Summary	232
11.7 Exercises	233
Further Readings	238
Appendix A: Electric Multipoles.	239
Appendix B: Magnetic Multipoles	247
Appendix C: Magnetic Energy in the Presence of a Material.	253
Appendix D: Solutions to Exercises	255
Appendix E: General Magnetic Force Formula	353
Index	357

Electrodynamics: The Field-Free Approach
Electrostatics, Magnetism, Induction, Relativity and
Field Theory

Prytz, K.

2015, XXV, 361 p. 204 illus., 4 illus. in color., Hardcover
