

Contents

1	Introduction to the Subject of an Agent in Computer Science.	1
2	Agent Versus Decomposition of an Algorithm	7
2.1	The Genesis of an Agent.	7
2.2	The Model of an Algorithm and Problems with Its Decomposition	8
2.3	Decomposition Inspired by the Division of a Set	10
2.4	Decomposition Inspired by the Concept of the Cartesian Product	11
2.4.1	The Decomposition of an Algorithm Based on the Cartesian Product Versus Problem of Autonomy.	12
2.4.2	The Autonomy of an Algorithm.	14
2.5	Decomposition with the Use of the Concept of the Cartesian Product Applied to the Set U	19
2.5.1	Step One—The Introduction of the Environment Concept	20
2.5.2	Step Two—Modes of Access to Internal Data of Another Algorithm.	26
2.6	Multi-agent System as a Result of Decomposition of an Algorithm	32
2.7	Decomposition with the Use of the Cartesian Product in the Category of the Algorithm Alg	35
2.8	Summary—Decomposition, Agent, Autonomy	37
3	M-agent	43
3.1	Introduction.	43
3.2	The Notion of an Agent and the Concept of Its Architecture	44

3.2.1	The Concept of an Agent—Informal Information Technology Approach	44
3.2.2	Intuitive Approach to the Construction of an Agent and Properties of Agents	47
3.2.3	The Environment of Agents, Relationships Between the Agent and the Environment	49
3.3	M-agent in the Agent System	50
3.3.1	The Multi-agent System Activity—The Basic Assumptions	51
3.3.2	A Model of the M-agent—Informal Approach	53
3.4	The Model Based on the M-agent Architecture	55
3.5	The Concept of the Agent's Profile and the Model of the Multi-profile Agent	58
3.6	Extensions and Applications of the M-agent Concept	59
3.6.1	Planning, Negotiations	59
3.6.2	The Process of Agent's Learning	62
3.6.3	The Concept of the State Memorized by an Agent	64
3.6.4	The Classification of the Multi-agent Systems Based on the M-agent Model	65
4	The Agent System for Balancing the Distribution of Resources	67
4.1	Introduction	67
4.2	The Agent Environment of Balancing the Distribution of Resources	67
4.3	Agent System	69
4.4	Information in the Agent System	73
4.5	Stabilization and Scaling of the Multi-agent System	76
4.5.1	Keeping the Minimal Number of Agents	77
4.5.2	The Limitation of the Maximum Number of Agents	77
4.6	Illustrative Results of Research into Balancing the Resources in the Multiprocessor Structure	81
4.7	Summary	86
5	The Examples of Applications of the Agent Systems	89
5.1	Agents in Cooperative Mobile Robots Management	89
5.1.1	The Concept of the Agent as a Robot in Cyberspace and Real-Space	90
5.1.2	Examples of the Application of the Concept of an Agent-Robot in Cyberspace	91
5.1.3	The Agent System Managing Mobile Robots for Waste Disposal	94

5.1.4	The Agent System Managing Task Distribution Among Mobile Robots	97
5.1.5	Summary	100
5.2	Agents in Service-Oriented Systems (SOA)	100
5.2.1	The Concept of the Application of Agents in the Service-Oriented Systems (SOA)	101
5.2.2	Summary	106
5.3	Agent System for the Recognition of Atypical Behaviours Using the Immune and Socio-Ethical Approach	106
5.3.1	The Recognition of Atypical Situations.	106
5.4	Agents in the Evolution Systems	112
5.4.1	The Properties of the Agent Acting in the Evolution System.	112
5.4.2	Operations Applied to the Evolution Agent Systems	114
5.4.3	Co-evolution as the Extension of the Evolution Process.	115
5.4.4	Examples of the Co-evolution Systems.	117
5.5	Agent in the Simulation of Dynamic Processes in the Continous Environments	122
5.5.1	The Agent Simulation of Complex Phenomena	122
5.5.2	The System Realizing the Simulation of the Displacement of Bodies.	124
5.5.3	An Example of the Application in the Casting Processes	126
6	Conclusion	129
