

Contents

1	Introduction	1
1.1	Thermodynamics of Irreversible Processes and the Laws of Navier-Stokes and Fourier	2
1.1.1	Dawn of Thermodynamics	2
1.1.2	TIP of One-Component Viscous and Heat-Conducting Fluids	3
1.1.3	Laws of Navier-Stokes and Fourier	5
1.1.4	Parabolic Structure and the Prediction of Infinite Speed of Waves in TIP	6
1.1.5	Cattaneo Equation	7
1.2	First Tentative of Extended Thermodynamics and Rational Extended Thermodynamics	9
1.3	Rational Thermodynamics and the Entropy Principle	9
1.4	Other Approaches	10
1.5	Rational Extended Thermodynamics and the Kinetic Theory	11
1.5.1	Boltzmann Equation and the Moments	12
1.5.2	Closure of RET	13
1.5.3	Macroscopic Approach of RET with 13 Fields	14
1.5.4	Grad Distribution	15
1.5.5	Closure via the Maximum Entropy Principle and Molecular RET of Monatomic Gases	15
1.6	New Approach to Polyatomic Gas and Dense Gas	16
1.6.1	Macroscopic Approach with 14 Fields	17
1.6.2	Singular Limit from Polyatomic to Monatomic Gas	18
1.6.3	MEP Closure and the Molecular Approach for the 14-Moment Theory	19
1.6.4	Applications of the 14-Field RET Theory	20
1.6.5	Molecular RET of Polyatomic Gases	22
1.6.6	6-Field RET Theory and Comparison with the Meixner Theory of Relaxation Processes	24
1.6.7	Nonequilibrium Temperature	25

1.7	Mixture of Gases with Multi-Temperature	25
1.8	Qualitative Analysis	26
1.9	About this Book	27
	References	28

Part I Mathematical Structure and Waves

2	Mathematical Structure	35
2.1	System of Balance Laws	35
2.1.1	Hyperbolicity in the t -Direction	36
2.1.2	Symmetric Hyperbolic System	36
2.2	Axioms of Rational Extended Thermodynamics	37
2.3	Entropy Principle and Symmetric Systems	38
2.3.1	General Discussions	38
2.3.2	Symmetric System of Euler Fluids	40
2.4	Principal Subsystems	41
2.5	Conservation and Balance Laws, and Equilibrium Subsystem	42
2.6	Qualitative Analysis	44
2.6.1	Competition Between Hyperbolicity and Dissipation	44
2.6.2	Shizuta Kawashima K-Condition	46
2.6.3	Global Existence and Stability of Constant State	47
2.7	Galilean Invariance	48
2.7.1	Field Equations in Terms of Intrinsic Quantities	50
2.7.2	Diagonal Structure in RET	50
	References	52
3	Waves in Hyperbolic Systems	55
3.1	Linear Wave	55
3.1.1	Plane Harmonic Waves and the Dispersion Relation	55
3.1.2	High Frequency Limit	56
3.2	Acceleration Wave	57
3.3	Shock Wave	62
3.3.1	Rankine-Hugoniot Relations	62
3.3.2	Admissibility of Shock Waves	63
3.4	Shock Structure	66
3.4.1	Shock Wave Structure and Sub-shock Formation	67
3.4.2	Non-existence of Smooth Shocks When $s > \lambda^{\max}(\mathbf{u}_o)$	69
3.5	Riemann Problem for Balance Laws	70
3.5.1	Riemann Problem with Structure	70
3.5.2	Conjecture Concerning Large-Time Asymptotic Behavior of Shock Structure	71
	References	74

Part II Survey of Rational Extended Thermodynamics of Monatomic Gas

4	RET of Rarefied Monatomic Gas	79
4.1	Extended Thermodynamics with 13 Fields and Subsystems	79
4.1.1	10-Field Principal Subsystem	80
4.1.2	Euler 5-Field Principal Subsystem	81
4.1.3	4-Field Principal Subsystem	81
4.1.4	1-Field Principal Subsystem	82
4.2	Bounded Domain: Heat Conduction and Problematic Boundary Data	82
4.2.1	Heat Conduction Analyzed by the 13-Moment ET Theory	83
4.2.2	Difficulty in the ET Theory in a Bounded Domain When the Number of Fields is More Than 13	88
4.3	Molecular RET for Large Number of Moments	89
4.3.1	Closure via the Entropy Principle	91
4.3.2	Closure via the Maximum Entropy Principle	93
4.4	Maximum Characteristic Velocity in the Classical Theory	94
4.4.1	Lower Bound Estimate and Characteristic Velocities for Large Number of Moments	95
4.5	Convergence Problem and a Theory Near Equilibrium State	97
4.6	Comparison with Experimental Data: Sound Waves and Light Scattering	98
4.7	Relativistic Theory and the Limit of Maximum Characteristic Velocity	99
4.7.1	Finite System of Moment Equations and Its Closure	101
4.7.2	The Macroscopic Relativistic 14-Field Theory	103
	References	105

Part III RET of Polyatomic Gas and Dense Gas with 14 Fields

5	RET 14-Field Theory of Polyatomic Gas and Dense Gas	109
5.1	Previous Tentatives	109
5.2	Binary Hierarchy in ET of Polyatomic Gas and Dense Gas: Heuristic Viewpoint	110
5.3	ET 14-Field Theory	111
5.3.1	Exploitation of the Galilean Invariance	112
5.3.2	Exploitation of the Entropy Principle	114
5.3.3	Convexity of the Entropy Density	121
5.3.4	Main Field	122
5.3.5	Field Equations	123

5.3.6	Relationship Between ET and Navier-Stokes Fourier Theories	125
5.4	Rarefied-Gas Limit	126
5.4.1	Non-polytropic Gas	126
5.4.2	Polytropic Gas	128
5.5	Models of Dense Gas	130
5.5.1	Gas with the Virial Equations of State	130
5.5.2	Hard-Sphere System	131
5.5.3	van der Waals Fluid	133
5.5.4	Remark	135
5.6	Singular Limit from Polyatomic to Monatomic Gas	135
	References	137
6	Maximum Entropy Principle for Rarefied Polyatomic Gas	139
6.1	Generalized Distribution Function for Rarefied Polyatomic Gases	139
6.2	Equilibrium Distribution Function for Polyatomic Gases and the Euler System	140
6.3	Justification of the Binary Hierarchy of the Moment-Equations for Polyatomic Gases	145
6.3.1	MEP for the 14-Moment System for Polyatomic Gases	146
6.3.2	Non-convective Fluxes and Productions	148
6.3.3	Entropy and Entropy Flux	150
6.3.4	Remark	150
	References	151
 Part IV Applications of the ET14 Theory		
7	Linear Wave in a Polyatomic Gas	155
7.1	Basic Equations	155
7.2	Dispersion Relation for Sound	157
7.2.1	Dispersion Relation, Phase Velocity and Attenuation Factor	157
7.2.2	High Frequency Limit of the Phase Velocity and the Attenuation Factor	158
7.3	Comparison with Experimental Data	159
7.3.1	Preliminary Calculations	160
7.3.2	Relaxation Times	162
7.3.3	Experimental Data and Theoretical Predictions for the Dispersion Relation	162
7.3.4	Remarks	166
7.4	Conclusion	169
	References	170

8	Shock Wave in a Polyatomic Gas	173
8.1	Introduction	173
8.2	Basic Equations	175
8.2.1	Equations of State, Internal Energy, and Sound Velocity	175
8.2.2	Balance Equations	175
8.3	Setting of the Problem	177
8.3.1	Dimensionless Form of the Field Equations	177
8.3.2	Boundary Conditions: Rankine-Hugoniot Conditions for the System of the Euler Equations	179
8.3.3	Parameters	179
8.3.4	Numerical Methods	181
8.4	Navier-Stokes Fourier Theory	187
8.5	Shock Wave Structure	188
8.5.1	Type A: Nearly Symmetric Shock Wave Structure	188
8.5.2	Type B: Asymmetric Shock Wave Structure	189
8.5.3	Type C: Shock Wave Structure Composed of Thin and Thick Layers	189
8.5.4	Critical Mach Numbers for the Transitions Between the Types A-B and B-C	190
8.5.5	Reexamination of the Bethe-Teller Theory	190
8.6	Comparison with Experimental Data	191
8.7	Conclusion	191
	References	192
9	Light Scattering, Heat Conduction, and Fluctuation	193
9.1	Light Scattering	193
9.1.1	Introduction	193
9.1.2	Basic Equations	194
9.1.3	Comparison with Experimental Data for CO ₂	197
9.2	Heat Conduction	198
9.2.1	Basis of the Present Analysis	199
9.2.2	Boundary Conditions	201
9.2.3	Effect of the Dynamic Pressure	201
9.2.4	An Example: Polyatomic Effect in a Para-Hydrogen Gas	202
9.3	Fluctuating Hydrodynamics of ET14	203
9.3.1	Introduction	203
9.3.2	Theory of Fluctuating Hydrodynamics Based on ET	203
9.3.3	Two Subsystems of the Stochastic Field Equations	204
9.3.4	Relationship to the Landau-Lifshitz Theory	206
9.3.5	Conclusion	208
	References	208

Part V Maximum Entropy Principle and Nesting Theories of Many Moments

10 Molecular ET Theory of Rarefied Polyatomic Gas	213
10.1 Introduction	213
10.2 MEP Closure for Rarefied Polyatomic Gases with Many Moments	214
10.2.1 Galilean Invariance	217
10.2.2 Closure of the (N, M) -System via the Maximum Entropy Principle	218
10.2.3 Closure of the (N, M) -System via the Entropy Principle	219
10.2.4 Closure and Symmetric Hyperbolic Form	221
10.3 Closure in the Neighborhood of a Local Equilibrium State and Principal Subsystems	222
10.3.1 14-Moment System and Its Principal Subsystems	223
10.3.2 Closure for Higher-Order Systems	224
10.4 Characteristic Velocities of the (N, M) -System	227
10.4.1 Characteristic Velocities of the 14-, 11-, 6- and 5-Moment Systems	228
10.4.2 Systems with D -Independent Characteristic Velocities	230
10.5 Characteristic Velocities of the $(N, N - 1)$ -System and the Analysis of the Cases: $D \rightarrow 3$ and $D \rightarrow \infty$	233
10.5.1 Limit Case: $D \rightarrow 3$	234
10.5.2 Limit Case: $D \rightarrow \infty$	235
10.5.3 The Case: $3 < D < \infty$	237
10.6 Dependence of the Maximum Characteristic Velocity on the Order N	238
References	240

Part VI ET6: A Theory of Far-from-Equilibrium Thermodynamics

11 Non-linear ET6 and the Role of the Dynamic Pressure: Phenomenological Approach	245
11.1 Introduction	245
11.2 ET Theory with Six Fields	247
11.2.1 Galilean Invariance	247
11.2.2 Entropy Principle	248
11.2.3 Convexity Condition and Stability	250
11.2.4 Residual Inequality and Production Term	251
11.2.5 Main Field and Symmetric Form	252
11.2.6 Alternative Form of the Differential System	253
11.2.7 Euler Fluid as a Principal Subsystem of the ET6 System and Subcharacteristic Conditions	254

11.3	Comparison Between Nonlinear Systems of the ET6 Theory and of the Meixner Theory	255
11.4	ET6 Theory Near Equilibrium	259
11.4.1	Comparison Between the ET Theory Near Equilibrium and the Meixner Theory	260
11.5	Examples of an Ideal Polytropic Gas	262
11.5.1	Far-from-Equilibrium Case	262
11.5.2	Near-Equilibrium Case	265
11.5.3	Rarefied Monatomic-Gas Limit	265
11.6	Conclusion	266
	References	267
12	Molecular Non-linear ET6 for Rarefied Polyatomic Gas	271
12.1	Introduction	271
12.2	Nonequilibrium Distribution Function	272
