

Contents

1	Basic Mathematical Methods	1
1.1	Index Notation	1
1.2	Derivatives with respect to a Vector	2
1.3	Newton-Raphson Method	4
1.4	Other Solution Methods	6
1.5	Derivatives of Implicit Functions	7
1.6	Step-Size Control	9
1.7	Line Search	10
1.8	Convergence Criteria	12
 Part I Geometric Nonlinearities		
2	Geometrically Nonlinear Behaviour	17
2.1	Fundamental Terms of Geometric Nonlinearities	17
2.2	Theory of Second Order, Equilibrium in the Deformed System	17
2.2.1	Motivation and FE-Formulation	17
2.2.2	Why Theory of Second Order?	20
2.2.3	Linear Buckling	22
2.2.4	Correct Stress-Stiffness Matrix for the Bernoulli-Beam	26
2.3	Large Rotations I: Strain Measure	30
2.3.1	Kinematic Effects	30
2.3.2	Appropriate Strain Measure: Green-Lagrange Strain	31
2.3.3	The Principle of Virtual Work for Geometrically Nonlinear Problems	35
2.3.4	Solution of the Nonlinear Equation by the Newton-Raphson Method	36
2.3.5	Test Problem Two-Legged Truss	40
2.3.6	Notation in Continuum Mechanical Symbols	43

2.4	Large Rotations II: Co-rotational Formulation	49
2.4.1	Basic Idea	49
2.4.2	Strain, Internal Forces, Tangential Stiffness Matrix . . .	52
2.4.3	Direction of Strain and Stress	56
2.4.4	Example Link Element	57
2.4.5	Numerical Example Two-Legged Truss	62
2.4.6	Comparison with Green Strain	65
2.4.7	Determination of the Element Coordinate Systems . . .	67
2.5	Large Strain	68
2.5.1	One-Dimensional Considerations	68
2.5.2	Transition to Two- and Three-Dimensional Systems . . .	70
2.5.3	Hencky Strain in Terms of Continuum Mechanical Symbols	72
2.5.4	Logarithmic Strain and Corotational Formulation . . .	72
2.6	Related Stress	75
2.6.1	General 1d-Relation to Strain	75
2.6.2	Engineering Quantities	76
2.6.3	Green-Lagrange Strain	76
2.6.4	Logarithmic Strain	78
2.6.5	Continuum Mechanics Aspect	81
2.7	Updated-Lagrange Formulation	82
2.7.1	Classic Approach	82
2.7.2	Generalisation	85
3	Stability Problems	87
3.1	Phenomena	87
3.2	Conditions for Critical Points, Indifference Criterion	91
3.2.1	General	91
3.2.2	Formulations of the Instability Condition	93
3.2.3	Modal Analysis (Natural-Frequencies Analysis) and Stability Problems	95
3.2.4	Direct Identification of Critical Points by an Extended System	98
3.3	Meaning of the Eigenvector	101
3.4	Imperfections	102
3.4.1	Imperfection by Forces	102
3.4.2	Imperfection by Geometric Prescriptions	103
3.4.3	Imperfection by a Linear Buckling Analysis	103
3.4.4	Eigenvalue- and Mode-Tracking	104
3.5	Imperfection Sensitivity	105
3.5.1	Size of the Imperfection	108
3.6	Classification of Instability Analyses	108
3.6.1	Linear Buckling Analysis (LBA)	108
3.6.2	Geometrically Non-linear Analysis (GNA)	108

3.6.3	Geometrically and Materially Non-linear Analysis (GMNA)	109
3.6.4	Geometrically or Geometrically and Materially Non-linear Imperfect Analysis (GNIA or GMNIA) . . .	109
4	Load Incrementation in a Non-linear Analysis	111
4.1	Force Control	111
4.2	Simple Displacement Control	112
4.3	Displacement Control with Force-Type Loads	113
4.4	Arc-Length Methods	114
4.4.1	Search Perpendicular to the Last Secant	115
4.4.2	Model Problem	117
4.4.3	Search Perpendicular to the First Tangent	119
4.4.4	Search Perpendicular to the Actual Tangent	119
4.4.5	Search on a Circle Resp. on a Hypersphere	122
4.4.6	Initial Values and Arc-Length	129
4.4.7	Solving the Extended System	131
 Part II Nonlinear Material Behaviour		
5	Fundamentals of Material Models	137
5.1	Representative One-Dimensional Basic Elements	137
5.1.1	Elasticity (Hooke-Element)	137
5.1.2	Plasticity (St.-Venant-Element)	138
5.1.3	Time-Dependent Behaviour (Newton-Element)	139
5.2	Models Composed of Basic Elements	139
5.2.1	Elasto-Plasticity (Prandtl-Element)	139
5.2.2	Maxwell-Element for Creep	140
5.2.3	Kelvin-Voigt-Element for Visco-Elasticity	143
5.2.4	Extended Visco-Elasticity Model	144
5.2.5	Bingham-Model as Example for Visco-Plasticity	145
5.2.6	Burghers Model	146
5.3	Tensor- and Vector-Notation, Tensor- and Engineering Notation	148
5.4	Split-Up and Graphical Representation of Spatial Stress States	149
5.4.1	Principal Stress	149
5.4.2	Isotropic-Stress Tensor and Stress Deviator	150
5.4.3	Principal-Stress Space	152
5.5	Taking Non-Linear Material Behaviour into Account in the FEM	152
6	Theory and Numerics of the Linear Visco-elasticity	155
6.1	Basic Formulae for the One-Dimensional Case	155
6.2	Introduction of Time-Steps	157
6.3	Numerics	159
6.4	Material Tangent	160

6.5	Algorithm	161
6.6	Two- and Three-Dimensional Case	161
6.6.1	Calculation of Stress	161
6.6.2	Material Tangent	162
6.6.3	Algorithm	164
6.7	Temperature Dependency	165
6.7.1	Fundamentals of Thermo-rheologically Simple Materials, Pseudo-time	166
6.7.2	Time Integration	168
6.7.3	Shift-Functions	170
6.7.4	Stress	172
6.7.5	Tangent	173
6.7.6	Algorithm	173
6.8	Plane Stress and Plane Strain	174
6.8.1	Plane Strain	174
6.8.2	Plane Stress	174
6.9	Hand Calculation Examples	176
6.9.1	To Section 6.1	176
6.9.2	To Section 6.2	177
6.9.3	To Section 6.3	178
7	Theory and Numerics of Creep	181
7.1	Fundamentals	181
7.2	Time Integration for Creep	185
7.2.1	Difference Quotients	185
7.2.2	Creep Example	185
7.2.3	Explicit Time Integration	186
7.2.4	Variable Time Step	189
7.2.5	Implicit Time Integration	190
7.2.6	Summary of Creep Example	194
7.2.7	Interaction with Other Material Non-Linearities	196
7.3	Consistent Tangent for Implicit Creep	196
7.3.1	Derivation	196
7.3.2	Examples	199
7.4	General Formulation for the Local and the Global Iteration	204
7.5	Commented FORTRAN Code	206
8	Theory and Numerics of Elasto-plasticity	209
8.1	Basic Terms of the One-Dimensional Behaviour	209
8.2	Components of a Three-Dimensional Elasto-plasticity Theory	210
8.3	Flow Rule	211
8.4	Classical Yield Conditions	212
8.4.1	Maximum-Distortion-Energy Hypothesis (after von Mises)	212
8.4.2	Shear-Stress Hypothesis (Tresca)	214
8.4.3	Mohr-Coulomb Condition	218
8.4.4	Drucker-Prager Condition	219

8.5	Hardening Rules	221
8.5.1	Uniaxial Stress–Strain Relations	221
8.5.2	Three-Dimensional Hardening	223
8.6	Fulfilling the Material Equations in the FEM, Local Iteration . . .	229
8.6.1	General Description	229
8.6.2	Example Linear Hardening	232
8.7	Consistent Tangent	235
8.7.1	General Description	235
8.7.2	Example Linear Hardening	238
8.8	Commented FORTRAN Programming	239
8.9	Models for Kinematic Hardening	245
8.9.1	Besseling-Model (Overlay-Model)	245
8.9.2	Armstrong-Frederik resp. Chaboche Model	249
8.10	Shakedown and Ratcheting	251
8.10.1	Terms	251
8.10.2	Melan’s Theorem	252
8.10.3	Structural Ratcheting	255
8.10.4	Material Ratcheting	257
8.10.5	Thermal Ratcheting	261
8.10.6	Numerical Ratcheting in Thermal Cycles	261

Part III Contact

9	Contact Analysis: Introduction, Kinematics	269
9.1	Meaning of “Contact”	269
9.2	Modelling Contact	270
9.2.1	Node-to-Node Contact	270
9.2.2	Node-to-Surface Contact	270
9.2.3	Point-to-Surface Contact	271
9.2.4	Surface-to-Surface Contact	272
9.3	Contact Kinematics	272
10	Fulfilling the Contact Condition	277
10.1	Direct Constraining	278
10.2	Penalty Method	279
10.3	Lagrange-Multiplier Method	281
10.4	Finite-Element Test Problem	282
10.4.1	Directly Introducing the Constraint into the System of Equations	284
10.4.2	Penalty Method	290
10.4.3	Method of Lagrangian Multipliers	292
10.4.4	Perturbed-Lagrange Method	294
10.4.5	Augmented-Lagrange Method	296
10.5	Overconstraining in Contact	298
10.6	Friction	298

11 Aspects of Modelling Contact	301
11.1 Node-to-Surface Contact	301
11.2 Integration-Point Contact	303
11.2.1 Problem and Solution	303
11.2.2 Nodes as Integration Points	308
11.3 Mortar Contact	310
11.3.1 The Contact Patch-Test	310
11.3.2 Projection Method	310
11.4 Achieving Convergence	313
11.4.1 Penalty Method	313
11.4.2 Lagrange Method and Direct Introduction	318
11.4.3 Appropriate Meshing and Load Application	318
11.5 System Matrices	318
12 Contact Detection	321
12.1 Search Strategies	321
12.1.1 Bucket Sort	321
12.1.2 Pinball Algorithm	322
12.1.3 Topology Search	325
12.2 Choosing Master- and Slave-Side	325
12.3 Near-Field Contact Calculations	327
12.3.1 Plane Surfaces	327
12.3.2 Pseudo-Element Algorithm	328
12.3.3 Normal Search	329
12.3.4 Numerical Example	333
12.4 Concave Kinks and Corners	352
13 Contact with Shell- and Beam-Elements	355
13.1 Taking Thickness into Account	355
13.2 Moments from Eccentricities	355
Selected References	359
Index	361

Non-Linear Finite Element Analysis in Structural
Mechanics

Rust, W.

2015, XIV, 363 p. 234 illus., 46 illus. in color., Hardcover
