

Contents

1	Introduction	1
1.1	Introductory Examples	1
1.1.1	Optimal Heating	1
1.1.2	Optimal Flow Control	2
1.1.3	A Least Squares Parameter Estimation Problem in Meteorology	3
1.2	A Class of Finite-Dimensional Optimization Problems	4
2	Basic Theory of Partial Differential Equations and Their Discretization	9
2.1	Notation and Lebesgue Spaces	9
2.2	Weak Derivatives and Sobolev Spaces	10
2.3	Elliptic Problems	13
2.3.1	Poisson Equation	13
2.3.2	A General Linear Elliptic Problem	15
2.3.3	Nonlinear Equations of Monotone Type	16
2.4	Discretization by Finite Differences	20
3	Theory of PDE-Constrained Optimization	25
3.1	Problem Statement and Existence of Solutions	25
3.2	First Order Necessary Conditions	27
3.2.1	Differentiability in Banach Spaces	27
3.2.2	Optimality Condition	30
3.3	Lagrangian Approach	33
3.4	Second Order Sufficient Optimality Conditions	38

4	Numerical Optimization Methods	43
4.1	Descent Methods	44
4.2	Newton's Method	53
4.3	Quasi-Newton Methods	60
4.4	Sequential Quadratic Programming (SQP)	65
5	Box-Constrained Problems	69
5.1	Problem Statement and Existence of Solutions	69
5.2	Optimality Conditions	70
5.3	Projection Methods	75
5.4	Primal Dual Active Set Algorithm (PDAS)	80
5.5	Semismooth Newton Methods (SSN)	86
6	Nonsmooth PDE-Constrained Optimization	91
6.1	Sparse L^1 -Optimization	91
6.2	Pointwise State Constraints	96
6.3	Variational Inequality Constraints	101
6.3.1	Inequalities of the First Kind	103
6.3.2	Inequalities of the Second Kind	110
	References	119
