

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Network Description of Complex Systems	1
1.2	Dynamics of Complex Networks	2
1.3	Challenges and Rewards of Experimental Network Realizations	3
1.4	Boolean Networks	4
1.5	Overview	5
	References	6
<b>2</b>	<b>Previous Work on Boolean Networks</b>	13
2.1	Synchronous and Autonomous Boolean Networks	13
2.2	Boolean Network Models	14
2.2.1	Kauffman Networks	14
2.2.2	Boolean Delay Equations	16
2.2.3	Piecewise-Linear Differential Equations	17
2.2.4	Overview of Boolean Network Models	19
2.3	Electronic Realizations of Boolean Networks	19
2.3.1	Autonomous Boolean Network by Zhang and Collaborators	20
2.3.2	Boolean Chaos	21
2.4	Conclusion	22
	References	22
<b>3</b>	<b>Autonomous Boolean Networks on Electronic Chips</b>	25
3.1	Field-Programmable Gate Arrays	25
3.1.1	Architecture of Field-Programmable Gate Arrays	26
3.1.2	Autonomous Mode of Operation	27
3.1.3	Non-ideal Effects of Autonomous Logic Gates	28

3.2	Design Flow of Implementing Autonomous Boolean Networks on Electronic Chips . . . . .	29
3.2.1	Hardware Description for Autonomous Boolean Networks . . . . .	29
3.2.2	Chip Placement of Autonomous Boolean Networks . . . . .	31
3.2.3	Resulting Dynamics. . . . .	32
3.3	Conclusion. . . . .	33
	References. . . . .	33
<b>4</b>	<b>Chaotic Dynamics of Autonomous Boolean Networks . . . . .</b>	<b>35</b>
4.1	Introduction to Deterministic Chaos. . . . .	35
4.1.1	Lyapunov Exponent. . . . .	36
4.1.2	Strong and Weak Chaos. . . . .	37
4.2	Delayed-Feedback XNOR Oscillator . . . . .	38
4.2.1	Motivation for Developing a New Chaotic Oscillator . . . . .	38
4.2.2	Search for a Simplified Network Topology. . . . .	39
4.2.3	Setup of the Delayed-Feedback XNOR Oscillator . . . . .	44
4.3	Dynamics of the Delayed-Feedback XNOR Oscillator . . . . .	45
4.3.1	Dynamics Measured from the Experiment . . . . .	45
4.3.2	Boolean Network Model for Chaotic Dynamics . . . . .	47
4.3.3	Transition to Chaos . . . . .	51
4.4	Conclusion. . . . .	53
	References. . . . .	53
<b>5</b>	<b>Ultra-Fast Physical Generation of Random Numbers Using Hybrid Boolean Networks . . . . .</b>	<b>57</b>
5.1	Introduction to Random Number Generation. . . . .	57
5.1.1	Application of Random Numbers to Private Communication. . . . .	57
5.1.2	Pseudorandom and Physical Random Number Generation . . . . .	59
5.1.3	Desired Statistical Properties of Random Numbers and Post-Processing . . . . .	61
5.1.4	Utilization of Autonomous Boolean Networks for Random Number Generation . . . . .	62
5.2	Hybrid Boolean Network Approach. . . . .	64
5.2.1	Dynamics of the XOR Ring Network . . . . .	65
5.2.2	Characterization of Boolean Complexity. . . . .	67
5.2.3	Modeling Results for the Dynamics of the XOR Ring Network. . . . .	70

5.2.4	Modeling Results for Boolean Complexity . . . . .	72
5.2.5	The Synchronous Part of the Hybrid Boolean Network. . . . .	73
5.3	Utilization as a Physical Random Number Generator. . . . .	74
5.3.1	Testing the Physical Random Number Generator. . .	74
5.3.2	Parallelization to Increase the Bitrate . . . . .	74
5.4	Conclusion. . . . .	76
	References. . . . .	78
<b>6</b>	<b>Periodic Dynamics in Autonomous Boolean Networks . . . . .</b>	<b>81</b>
6.1	Introduction to Periodic-Oscillatory Dynamical Systems. . . . .	81
6.1.1	Historical Perspective on Synchronization of Periodic Oscillators . . . . .	81
6.1.2	Motivation for the Study of Synchronization of Periodic Oscillators . . . . .	82
6.1.3	Notation of a Periodic Oscillator, Phase, and Synchronization . . . . .	82
6.1.4	Dynamical Systems with Periodic Dynamics. . . . .	84
6.1.5	Previous Work on Periodic Autonomous Boolean Networks. . . . .	86
6.2	Coupling of Modified Ring Oscillators . . . . .	89
6.2.1	Unidirectional Coupling of Modified Ring Oscillators . . . . .	90
6.2.2	Mutual Coupling of Modified Ring Oscillators . . . .	91
6.2.3	Model for Modified Ring Oscillators . . . . .	92
6.2.4	Discussion . . . . .	93
6.3	Boolean Oscillators with Variable Coupling Strength. . . . .	94
6.3.1	Boolean Phase Oscillator . . . . .	94
6.3.2	Unidirectional Synchronization of Boolean Phase Oscillators and Weak Coupling Analogy. . . .	96
6.3.3	Model for the Boolean Phase Oscillator . . . . .	99
6.3.4	Synchronization in a Bidirectional Coupling Configuration . . . . .	101
6.3.5	Discussion . . . . .	102
6.4	Conclusion. . . . .	104
	References. . . . .	104
<b>7</b>	<b>Chimera Dynamics in Networks of Boolean Phase Oscillators. . . .</b>	<b>107</b>
7.1	Introduction to Chimera States in Theory and Experiment . . .	107
7.1.1	Kuramoto Model. . . . .	108
7.1.2	Chimera States in Theoretical Models . . . . .	110
7.1.3	Transient Behavior of Chimera States in Finite-Size Networks . . . . .	113
7.1.4	Chimera States in Experiments . . . . .	114

7.2	Boolean Phase Oscillator Networks . . . . .	115
7.2.1	Setup of Boolean Phase Oscillators with Large In-Degree. . . . .	115
7.2.2	Derivation of a Phase Model for Boolean Phase Oscillators . . . . .	116
7.2.3	Electronic Implementation of Boolean Phase Oscillators . . . . .	118
7.3	Complex Dynamics in Boolean Phase Oscillator Networks. . .	120
7.3.1	Chimera Dynamics in Boolean Phase Oscillator Networks . . . . .	120
7.3.2	Resurgence of Chimera States. . . . .	120
7.3.3	Determining the Fraction of Chimera States in the Transient. . . . .	124
7.3.4	Nearly Synchronized State . . . . .	124
7.4	Transient Scaling of Boolean Oscillator Networks. . . . .	126
7.4.1	Scaling of the Transient Time. . . . .	126
7.4.2	Scaling of the Average Transient Time . . . . .	127
7.5	Numerical Simulation of Networks of Boolean Oscillators . .	128
7.5.1	Chimera States in the Model of Boolean Phase Oscillators . . . . .	128
7.5.2	Differences Between Modeled and Experimental Dynamics. . . . .	129
7.6	Conclusion. . . . .	130
	References. . . . .	130
<b>8</b>	<b>Excitable Dynamics in Autonomous Boolean Networks. . . . .</b>	<b>133</b>
8.1	Introduction to Excitability. . . . .	133
