Contents

Part I WTE State-of-the-Art

1 Introduction 3
References 5

2 Municipal Waste Overview 7
2.1 Municipal Solid Waste Definition and Management System Hierarchy 7
2.2 Overview of Waste Production and Disposal for European Countries 9
2.2.1 Overview of Municipal Solid Waste Production and Disposal in Italy 12
2.3 Municipal Solid Waste Landfill Average Costs 13
References 16

3 Waste-to-Energy 19
3.1 Basics of a WTE Power Plant 19
3.1.1 Waste Delivery and Storage Section 20
3.1.2 The Combustion Section 21
3.1.3 The Energy Recovery Section 26
3.1.3.1 Corrosion Protection 28
3.2 WTE Plant Distribution in the European Scenario 30
3.2.1 WTE Plant Efficiency in a Representative National Scenario 31
3.3 EU Regulation Framework Oriented to WTE Efficiency 33
References 36

Part II WTE Thermodynamic Analysis

4 Waste-to-Energy Steam Cycle 39
4.1 Steam Cycle State-of-the-Art Parameters and Layout 39
4.2 Steam Cycle Upgrade: Effects on Cycle Efficiency 44
4.3 New Designs for High-Efficiency WTE Plant 49
References 53

Part III WTE Advanced Cycles

5 Waste-to-Energy and Gas Turbine: Hybrid Combined Cycle Concept 57
5.1 The HCC Concept 57
5.1.1 WTE–GT Steam/Waterside Integration 59
5.1.2 WTE–GT Windbox Integration 61
5.2 State-of-the-Art of Integrated WTE–GT 63
5.3 Existing WTE–GT Integrated Power Plants 64
5.3.1 Zabalgarbi WTE–GT Power Plant: The SENER Solution 65
5.3.2 Moerdijk WTE–GT Power Plant: The Dutch Solution 67
5.3.3 Takahama WTE–GT Power Plant: The Japanese Solution 68
References 69

6 WTE–GT Steam/Waterside Integration: Thermodynamic Analysis on One Pressure Level 71
6.1 Thermodynamic Analysis of Steam Production 71
6.1.1 Influence of Evaporative Pressure and GT Outlet Temperature on Steam Production 76
6.2 Numerical Results 78
6.2.1 Optimum Plant Match in Terms of Electric Power Ratio 80
6.2.2 Traditional WTE Versus Integrated Plant: Steam Turbine Capacity 81
6.3 Conclusion 83
6.4 WTE–GT Proposed Layouts for a One-Pressure-Level HRSG 83
6.5 Comparative Results of WTE–GT One-Pressure-Level Integrated Layouts 104
References 109

Part IV Performance and Efficiency Conversion Issues

7 Performance Indexes and Output Allocation for Multi-fuel Energy Systems 113
7.1 Context 113
7.2 Performance Evaluation of an MF Energy System 115
7.2.1 MF Energy System Arrangement 115
7.2.2 Indexes for MF Energy System Performance Evaluation 116
7.2.2.1 First Law Efficiency 116
7.2.2.2 Electric Equivalent Efficiency 116
7.2.2.3 Relative SI 118
7.2.2.4 MF SI 119
7.2.3 Useful Output Allocation to Each ith Fuel 121
7.2.3.1 Allocation Approach #1 121
7.2.3.2 Allocation Approach #2 121

7.3 Application Example: Two-fuel Co-combustion Power Plant 122
7.4 Conclusions 125
References 126

8 Specific Application Cases with GT Commercial Units 127
8.1 Midsize WTE Reference Steam Cycle 127
8.2 WTE Integration with GT Units: Investigated Layout Cases and Results 130
8.2.1 GT Unit Selection 132
8.2.2 WTE–GT Integrated Plant Numerical Results 133
8.3 Conclusion 138
References 139
