|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>From Strict Determinism to Self-organization</b>                              | <b>1</b>  |
| 1.1      | Deterministic Approaches to Development: Expectations and Impediments            | 1         |
| 1.1.1    | Lessons from Embryonic Regulations   | 1         |
| 1.1.2    | Can Embryonic Inductions Be Regarded as Cause–Effect Relations?                  | 8         |
| 1.1.3    | Genetic Program of Development: Does It Actually Exist?                          | 9         |
| 1.2      | Main Notions and Principles of SOT, Applied to Developmental Events              | 11        |
| 1.2.1    | Translating Developmental Events into the Language of Symmetry Theory            | 11        |
| 1.2.2    | Parametric and Dynamic Regulations: Several Basic Models                         | 21        |
| 1.2.3    | Shaping Without Prepatterns  | 31        |
| 1.2.4    | Brief Biologically Oriented Exposure of Some Notions and Principles of Mechanics | 36        |
| 1.3      | Recommended Readings   | 39        |
|          | References   | 40        |
| <b>2</b> | <b>From Molecules to Cells: Machines, Symmetries, and Feedbacks</b>              | <b>43</b> |
| 2.1      | Introductory Remarks   | 43        |
| 2.2      | Chemo-Mechanical Transduction and Molecular Machines                             | 44        |
| 2.3      | Structures and Actions of Supramolecular Machines, Treated in Symmetry Terms     | 46        |
| 2.4      | Hierarchy of Stressed Networks and the Condition of Force Balance                | 50        |
| 2.5      | Final Remarks on Supramolecular Machines   | 52        |
| 2.6      | From Self-assembly to Self-organization: Temporal and Spatial Symmetry Breaks    | 53        |

|          |   |            |
|----------|---|------------|
| 2.7      | Metastable (“Glassy”) States of the Cytoskeleton and Energy Wells . . . . .   | 56         |
| 2.8      | Cell-Matrix and Cell–Cell Contacts: Mechanodependent Self-organization . . . . .  | 58         |
| 2.9      | Transmission and Regulation of Mechanical Forces in Cell Cortex . . . . .   | 63         |
| 2.10     | Symmetry Breaks in Entire Cells . . . . .   | 65         |
|          | References . . . . .  | 70         |
| <b>3</b> | <b>Morphogenesis on the Multicellular Level: Patterns of Mechanical Stresses and Main Modes of Collective Cell Behavior . . . . .</b> | <b>75</b>  |
| 3.1      | Introductory Remarks . . . . .  | 75         |
| 3.2      | Patterns of Mechanical Stresses (MS) in Developing Embryos . . . . .  | 76         |
| 3.2.1    | MS Patterns in Amphibian Embryos: Methods of Detection and Mapping . . . . .  | 76         |
| 3.2.2    | Mechanical Stresses in the Embryos of Other Taxonomic Groups . . . . .  | 82         |
| 3.2.3    | Mechanical Stresses in Post-embryonic Epithelia . . . . .   | 84         |
| 3.2.4    | Tensile Patterns and Developmental Order . . . . .  | 86         |
| 3.3      | Main Modes of Collective Cell Behavior . . . . .  | 88         |
| 3.3.1    | Homeostatic Cell Reactions . . . . .  | 88         |
| 3.3.2    | Modes of Cell Alignment . . . . .   | 90         |
|          | References . . . . .  | 108        |
| <b>4</b> | <b>Morphomechanical Feedbacks . . . . .</b>   | <b>113</b> |
| 4.1      | General Comments . . . . .  | 113        |
| 4.2      | Evidences for Hyper-restoration of Mechanical Stresses . . . . .  | 115        |
| 4.2.1    | Molecular–Supramolecular Levels . . . . .   | 115        |
| 4.2.2    | Cellular–Supracellular Levels . . . . .   | 116        |
| 4.3      | General Premises and Formulation of HR Model . . . . .  | 124        |
| 4.4      | Some Basic Properties of HR Responses . . . . .   | 125        |
| 4.5      | Main HR-Based Morphomechanical Feedbacks . . . . .  | 128        |
| 4.5.1    | Contraction–Extension Feedback (CEF) . . . . .  | 128        |
| 4.5.2    | Curvature-Increasing Feedback (CIF) . . . . .   | 129        |
| 4.5.3    | Extension–Extension Feedback (EEF) . . . . .  | 130        |
| 4.6      | Reconstructing Developmental Successions in Terms of HR Model . . . . .   | 130        |
| 4.6.1    | Morphomechanics of Zygote . . . . .   | 131        |
| 4.6.2    | Morphomechanics of Cytotomy . . . . .   | 133        |
| 4.6.3    | Morphomechanics of Blastulation and Gastrulation . . . . .  | 135        |
| 4.6.4    | Morphomechanics of the Post-gastrulation Events . . . . .   | 144        |
| 4.6.5    | Morphomechanical Approaches to Cell Differentiation . . . . .   | 150        |
|          | References . . . . .  | 154        |

|   |     |
|---|-----|
| <b>5 Morphomechanics of Plants</b> . . . . .  | 157 |
| Andrei Lipchinsky   |     |
| 5.1 An Outline Survey of Self-stressed Plant Architecture<br>and Its Implications for Plant Mechanobiology . . . . .  | 157 |
| 5.2 Organogenetic and Proliferative Events at the Shoot Apex<br>Are Correlated, but not Coupled, and Are Under Control<br>by a Non-local Master Field . . . . .                         | 161 |
| 5.3 Stress Pattern, Cortical Microtubule Dynamics,<br>and the Orientation of Nascent Cellulose Microfibrils<br>Are Wired into the Circuitry Modulating Plant<br>Morphogenesis . . . . . | 164 |
| 5.4 Stress-Dependent Polarization of Auxin Transporters<br>Is Pivotal in Spatiotemporal Patterning of Organ Initiation<br>at the Shoot Apex . . . . .                                   | 167 |
| 5.5 Expansins—Stress-to-Strain Actuators that Play a Preeminent<br>Role in Plant Morphogenesis. . . . .   | 169 |
| 5.6 A More Detailed Analysis of Tissue Stresses at the Shoot<br>Apex and Their Significance for Plant Morphogenesis . . . . .   | 174 |
| 5.7 Tissue Stresses and Morphogenesis in Roots . . . . .  | 179 |
| References . . . . .  | 185 |
| <b>Concluding Remarks</b> . . . . .   | 191 |

Morphomechanics of Development

Beloussov, L.V.

2015, XV, 195 p. 55 illus., 45 illus. in color., Hardcover

ISBN: 978-3-319-13989-0
