

# Contents

<b>1</b>	<b>On the Roots of Fuzzy Sets</b>	<b>1</b>
1.1	A Genesis of Fuzzy Sets	1
1.1.1	L-Degree	3
1.1.2	Fuzzy Sets	5
1.2	Opposite, Negate, and Middle	12
1.2.1	Antonyms	12
1.2.2	Negations	14
1.2.3	Antonyms and Negations	17
1.2.4	Medium Term	19
1.3	AND/OR	20
1.3.1	AND	20
1.3.2	OR	20
1.4	Qualified, Modified, and Constrained Predicates	22
1.4.1	Qualified Predicates	22
1.4.2	Linguistic Modifiers	23
1.4.3	Constrained Predicates	24
1.4.4	Group Meaning	25
1.4.5	Synonyms	26
1.5	Linguistic Variables	28
1.5.1	Fuzzy Partition	29
1.6	A Note on Lattices	31
1.6.1	Examples	33
<b>2</b>	<b>Algebras of Fuzzy Sets</b>	<b>35</b>
2.1	Introduction	35
2.1.1	Cartesian Product	35
2.1.2	Extension Principle	36
2.1.3	Preservation of the Classical Case	37
2.1.4	Resolution	38

2.2	The Concept of an ‘Algebra of Fuzzy Sets’ . . . . .	41
2.2.1	Introduction . . . . .	41
2.2.2	Algebras of Fuzzy Sets. . . . .	43
2.2.3	Non-contradiction and Excluded-Middle . . . . .	47
2.2.4	Decomposable Algebras . . . . .	50
2.2.5	Standard Algebras of Fuzzy Sets . . . . .	52
2.2.6	Strong Negations . . . . .	56
2.2.7	Continuous T-Norms and T-Conorms . . . . .	59
2.2.8	Laws of Fuzzy Sets . . . . .	61
2.2.9	Examples . . . . .	68
2.3	On Aggregating Imprecise Information . . . . .	77
2.3.1	Aggregation Functions . . . . .	78
2.3.2	Ordered Weighted Means . . . . .	79
2.3.3	More on Aggregations . . . . .	80
2.3.4	Examples . . . . .	81
<b>3</b>	<b>Reasoning and Fuzzy Logic</b> . . . . .	<b>83</b>
3.1	What Does It Mean “Logic”? . . . . .	83
3.1.1	Logic and Consequence Operators . . . . .	83
3.1.2	Conjecturing . . . . .	85
3.2	Reasoning with Conditionals: Representation . . . . .	87
3.2.1	What is a Conditional? . . . . .	87
3.2.2	The Case of Boolean Algebras . . . . .	88
3.2.3	Fuzzy Conditionals . . . . .	90
3.3	Short Note on Other Modes of Reasoning . . . . .	98
3.4	Inference with Fuzzy Rules . . . . .	99
3.4.1	Finite Case . . . . .	102
3.4.2	Inference with Several Rules . . . . .	103
3.4.3	Examples . . . . .	106
3.5	Defuzzification . . . . .	108
3.6	Rules and Conjectures . . . . .	112
3.7	Two Final Examples . . . . .	113
<b>4</b>	<b>Fuzzy Relations</b> . . . . .	<b>117</b>
4.1	What Is a Fuzzy Relation? . . . . .	117
4.2	How to Compose Fuzzy Relations? . . . . .	119
4.3	Which Relevant Properties Do Have a Fuzzy Binary Relation? . . . . .	121
4.4	The Concept of T-State. . . . .	124
4.5	Fuzzy relations and $\alpha$ -cuts . . . . .	125

<b>5</b>	<b>T-Preorders and T-Indistinguishabilities</b>	131
5.1	Which Is the Aim of This Section?	131
5.2	The Characterization of T-Preorders	133
5.3	The Characterization of T-Indistinguishabilities	134
<b>6</b>	<b>Fuzzy Arithmetic</b>	141
6.1	Introduction.	141
6.2	Fuzzy Numbers	144
6.2.1	Operations with Fuzzy Numbers	145
6.2.2	Operations with Triangular Fuzzy Numbers.	146
6.2.3	Note.	150
6.3	A Note on the Lattice of Fuzzy Numbers	151
6.3.1	Example	152
6.4	A Note on Fuzzy Quantifiers.	154
6.4.1	Quantified Fuzzy Statements	156
<b>7</b>	<b>Fuzzy Measures</b>	159
7.1	Introduction.	159
7.2	The Concept of a Measure	160
7.3	Types of Measures	162
7.4	$\lambda$ -Measures	162
7.5	Measures of Possibility and Necessity.	164
7.6	Examples	167
7.7	Probability, Possibility and Necessity	170
7.8	Probability of Fuzzy Sets	171
<b>8</b>	<b>An Introduction to Fuzzy Control.</b>	175
8.1	Introduction.	175
8.1.1	Note.	179
8.2	Revising Conditional and Implications in Fuzzy Control	179
8.2.1	Inference from Imprecise Rules	180
8.2.2	Takagi-Sugeno of Order 1.	189
8.3	Control of Nonlinear Systems	190
8.3.1	State-Space Representation	190
8.3.2	Takagi-Sugeno Models for Control of Nonlinear Systems	191
8.3.3	Stability Analysis.	194
8.3.4	Parallel Distributed Compensation	195
8.3.5	Piecewise Bilinear Model	197
8.3.6	Vertex Placement Principle	199
	<b>Bibliography</b>	203

Fuzzy Logic

An Introductory Course for Engineering Students

Trillas, E.; Eciolaza, L.

2015, XI, 204 p. 103 illus., 3 illus. in color., Hardcover

ISBN: 978-3-319-14202-9
