

# Contents

|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b>Introduction of Fluid Flow and Heat Transfer in Porous Media . . . . .</b>                     | <b>1</b>  |
| 1.1      | Specification of Porous Media . . . . .   | 1         |
| 1.2      | Porous Media Models . . . . .   | 3         |
| 1.2.1    | Models for Fluid Flow . . . . .   | 3         |
| <b>2</b> | <b>A Uniform Theoretical Model for Fluid Flow and Heat Transfer<br/>in Porous Media . . . . .</b> | <b>9</b>  |
| 2.1      | Microscopic Governing Equations . . . . .   | 9         |
| 2.2      | Macroscopic Governing Equations . . . . .   | 10        |
| 2.3      | Closure Models for Macroscopic Equations . . . . .  | 11        |
| 2.3.1    | Closure Model for Drag . . . . .  | 11        |
| 2.3.2    | Relation to the Darcy–Brinkman Model . . . . .  | 12        |
| 2.3.3    | Closure Models for Heat Transfer in Porous Media . . . . .  | 13        |
| <b>3</b> | <b>Numerical Methods . . . . .</b>  | <b>17</b> |
| 3.1      | Dimensionless Governing Parameters . . . . .  | 17        |
| 3.2      | Dimensionless Governing Equations . . . . .   | 18        |
| 3.3      | Review of Numerical Methods . . . . .   | 19        |
| 3.4      | Projection Method . . . . .   | 20        |
| 3.4.1    | Introduction of Projection Method . . . . .   | 20        |
| 3.4.2    | Projection Method with Staggered Meshes . . . . .   | 20        |
| 3.5      | Lattice Boltzmann Method . . . . .  | 21        |
| 3.5.1    | Introduction to Lattice Boltzmann Method . . . . .  | 21        |
| 3.5.2    | Nondimensional Lattice Boltzmann Method . . . . .   | 23        |
| <b>4</b> | <b>Illustration of Numerical Approaches . . . . .</b>   | <b>27</b> |
| 4.1      | Problem Definition . . . . .  | 27        |
| 4.2      | Application of the Numerical Methods . . . . .  | 28        |
| 4.2.1    | Porous Medium Approach by Projection Method . . . . .   | 29        |
| 4.2.2    | Porous Medium Approach by NDLBM . . . . .   | 34        |
| 4.2.3    | Direct Simulation Approach by NDLBM . . . . .   | 35        |
| 4.3      | Comparison of Results . . . . .   | 36        |

|                             |   |           |
|-----------------------------|---|-----------|
| 4.3.1                       | Tank Averaged Temperature and Energy Discharged . . . . | 36        |
| 4.3.2                       | Transient Averaged Nusselt Numbers of Tubes . . . . .   | 36        |
| 4.3.3                       | Transient Isotherms and Streamlines . . . . .           | 37        |
| 4.3.4                       | Comparison of CPU Times . . . . .                       | 38        |
| 4.3.5                       | Summary . . . . .                                       | 41        |

Modeling Approaches to Natural Convection in Porous  
Media

Su, Y.; Davidson, J.H.

2015, X, 47 p. 11 illus., 4 illus. in color., Softcover

ISBN: 978-3-319-14236-4
