

Contents

1	Introduction: What is all that about?	1
2	What is wave motion?	9
2.1	What is a wave?	9
2.2	What is a wave equation?	10
2.3	What is needed for wave motion?	12
2.4	How to measure waves?	14
2.5	Why does the wave equation need to be modified?	17
3	How to model waves?	19
3.1	What must be known before modelling?	19
3.2	What are the general principles for modelling?	21
3.3	How to model waves in homogeneous materials?	24
3.4	How to modify wave equations for homogeneous solids?	27
3.5	How to model waves in heterogeneous materials?	30
4	What are internal variables? A. Berezovski answers	43
4.1	What are internal structures in terms of internal variables?	43
4.2	How to use internal variables in continuum mechanics?	45
4.3	How to model elastic waves using the concept of internal variables?	55
4.4	How to model thermoelastic waves using the concept of internal variables?	61
4.5	How to model the effects of microdeformation and microtemperature simultaneously?	66
5	What are evolution equations?	71
5.1	What is the difference between wave equations and evolution equations?	71
5.2	How to derive evolution equations?	73
5.3	What are examples of evolution equations?	80

6	What physical effects are involved?	91
6.1	What kind of questions should be asked?	91
6.2	Are there analytic solutions to wave or evolution equations?	92
6.3	What is the hierarchy of waves?	100
6.4	What are dispersive effects in wave motion?	107
6.5	How does dispersion affect wave profiles?	114
6.6	What is the result of dispersive and nonlinear effects in wave motion?	123
6.7	What are special features in terms of emergence and interaction of solitons?	135
7	What physical mechanisms govern waves in non-conservative systems?	151
7.1	What kind of models describe non-conservative systems?	151
7.2	What happens with solitons in non-conservative systems?	155
7.3	Are nerve pulses solitary waves?	164
7.4	What is the influence of thermal effects?	172
8	What is complexity of waves?	175
8.1	Why do we need the concept of complexity?	175
8.2	What are further questions to be asked?	180
8.3	What could be noted finally?	182

Questions About Elastic Waves

Engelbrecht, J.

2015, XIV, 196 p. 74 illus., 10 illus. in color., Hardcover

ISBN: 978-3-319-14790-1
