

Contents

Bioactive Compounds from Extremophiles	1
1 Introduction	2
2 Activating the Expression of Natural Product Biosynthetic Gene Clusters.	3
2.1 Genetic and Metabolic Engineering.	4
2.2 Heterologous Expression	8
2.3 Gene Activation by the Addition of Rare Earth Metals and Other Additives	16
2.4 Gene Activation via the Cocultivation of Microorganisms	18
3 Bioprospecting Metagenomes for Bioactive Agents	27
3.1 Using Metagenomics to Identify New Bioactive Molecules from Unculturable Microbes	29
3.2 Single-Cell Genomic Approaches to Identify New Unculturable Microbes with the Potential to Produce Bioactive Metabolites	34
4 Dereplication Methods for Identifying New Secondary Metabolites from Extremophiles	37
4.1 Hyphenated Liquid Chromatography Techniques for the Identification and Characterization of Natural Products	38
4.2 Soft Ionization Mass Spectrometry Methods Used the Identification and Characterization of Natural Products	40
4.3 Developing Molecular Frameworks to Find New Pharmacophores	41
4.4 NMR Techniques for the Structural Characterization of Low Concentrations of Pure or Mixtures of Compounds	42
5 Summary and Concluding Remarks	44
References	49

Bioactive Compounds from Extremophiles
Genomic Studies, Biosynthetic Gene Clusters, and New
Dereplication Methods

Giddings, L.-A.; Newman, D.J.

2015, V, 58 p. 13 illus., 7 illus. in color., Softcover

ISBN: 978-3-319-14835-9
