

Contents

Technological Aspects of Manufacturing and Numerical	
Modelling of Clinch-Adhesive Joints	1
Introduction	2
Clinching Technology	4
Ability to Clinching.	11
Influence of Contact Conditions on Forming Process	
and Strength of Clinched Joints	15
Influence of the Friction Coefficient	15
Numerical Analysis of Clinching Process for Different	
Values of the Friction Coefficient	19
Experimental Investigations of the Interface Roughness	
Influence on the Joint Strength	20
Conclusions	28
Adhesive Bonding and Adhesive Type Bonding Joints	28
Numerical Model Applied for Modelling of Simple	
and Hybrid Joints	30
Cohesive Zone Model (CZM).	31
Gurson-Tvergaard-Needleman (GTN) Damage Model	
for Ductile Material.	32
Ductile Damage Model DDM for Plastic Materials	33
Numerical FE Model of Simple and Hybrid Joints	35
Clinch-Adhesive Joints	35
Experimental Program—Shear and Peel Tests on Single	
and Hybrid Lap Joints	37
Conclusions	49
Numerical Modelling of the Hybrid Joints Mechanical	
Response	50
Summary and Conclusions	56
References	57

Technological Aspects of Manufacturing and Numerical
Modelling of Clinch-Adhesive Joints

Sadowski, T.; Balawender, T.; Golewski, P.

2015, VIII, 59 p. 72 illus., 68 illus. in color., Softcover

ISBN: 978-3-319-14901-1
