1	Introduction	1
1.1	End-of-Life Product Treatment	1
1.2	Disassembly of Products	5
1.2.1	Research Directions	5
1.2.2	Automated Disassembly	6
	References	6
2	General Disassembly Process	9
2.1	Disassembly Process Planning (DPP)	9
2.1.1	Difficulties in Disassembly	10
2.1.2	Representation of Product Structure	12
2.1.3	Disassembly Process Representation	13
2.1.4	Disassembly Sequence Planning (DSP)	16
2.2	Completeness of Disassembly	18
2.3	Disassembly Operations	19
2.3.1	Types of Fasteners	19
2.3.2	Dismantling Techniques	20
2.4	Conclusions	21
	References	22
3	Disassembly Automation	25
3.1	Introduction	25
3.2	Principle of Disassembly Automation	27
3.3	Mechanical Design and Control	31
3.3.1	Manipulator	31
3.3.2	Disassembly Tools	32
3.3.3	Handling Devices	36
3.4	Degree of Autonomy	40
3.4.1	Semi-automatic Disassembly	40
3.4.2	Fully Automatic Disassembly System	44

3.5	System Setup in This Research	47
3.6	Conclusions	50
	References	51
4	Vision System.	55
4.1	Introduction	55
4.1.1	Why a Vision System?	55
4.1.2	General Requirements	57
4.2	System Setup	58
4.2.1	Sensor Technologies.	60
4.2.2	Comparative Summary.	63
4.2.3	Overview of Configuration.	63
4.2.4	Calibration and Localisation	65
4.3	Recognition Techniques	71
4.3.1	Thresholding.	71
4.3.2	Edge Detection and Contour Geometry	72
4.3.3	Template Matching.	74
4.3.4	Keypoint Feature Matching	74
4.3.5	Semantic/Relational Features.	75
4.3.6	Further Classification Methods	76
4.3.7	Conclusions	77
4.4	Requirements and Functionality.	78
4.4.1	Product Detection.	78
4.4.2	Main Component Detection	79
4.4.3	Connective Component Detection	84
4.4.4	State Change Detection for Execution Monitoring	87
4.4.5	Extensibility	90
4.5	Conclusions	91
	References	92
5	Cognitive Robotics	95
5.1	Autonomous Robot and Cognitive Robotics	95
5.2	Concept Overview	98
5.2.1	Human Driven Disassembly.	98
5.2.2	Agent Emulating Human Behaviour	100
5.3	System Architecture and Cognitive Functions	101
5.3.1	Operation Modules and Uncertainties	101
5.3.2	Architecture	103
5.3.3	Language Framework and Interactions	105
5.4	Basic Behaviour Control	108
5.4.1	Disassembly Domain	108
5.4.2	Reasoning.	111
5.4.3	Execution Monitoring.	113
5.5	Advanced Behaviour Control.	114
5.5.1	Knowledge Base.	115

5.5.2	Learning	118
5.5.3	Learning by Demonstration	119
5.5.4	Revision	122
5.6	Implementation Procedure	126
5.7	Conclusions	127
	References	127
6	Implementation and Case-Study	129
6.1	Implementation Overview	129
6.2	Product Analysis.	131
6.2.1	Case-Study Product: LCD Screens.	131
6.2.2	End-of-Life Treatment of LCD Screen Monitors.	131
6.2.3	Structure Analysis and Components	132
6.3	Disassembly Requirements	135
6.4	System Overview	136
6.4.1	Levels of Control and Operating Modules	136
6.5	Cognitive Robotic Module	140
6.5.1	Design and Functions.	140
6.6	Vision System Module	145
6.6.1	Design and Functions.	145
6.6.2	Performance	149
6.7	Disassembly Operation Unit Module.	152
6.7.1	Hardware Design and Functions	152
6.7.2	Functions	153
6.8	Experiment	158
6.8.1	Process Flow.	158
6.8.2	Key Performance Indices	164
6.8.3	Performance Testing—Flexibility of the System	165
6.8.4	Performance Testing—Learning and Revision.	170
6.8.5	Conclusion and Future Improvement.	173
6.9	Conclusions	174
	References	174
7	Conclusions	177
7.1	Conclusion in Technical Perspectives	177
7.1.1	Disassembly Operation Module	177
7.1.2	Vision System Module	179
7.1.3	Cognitive Robotics Module	180
7.1.4	Flexibility to Deal with Uncertainties	182
7.2	Economic Feasibility	183
7.3	Conclusions of the Research	184
7.3.1	Conclusions	184
7.3.2	Future Work	184
