

Contents

1	An Overview of the Brewing Process	1
	A Brief History of Brewing	1
	The Ingredients	2
	Water	2
	Malted Barley and Adjuncts	3
	Malting	4
	Hops	4
	Yeast	5
	Wort Production	5
	Milling	5
	Mashing	6
	Wort Boiling	7
	Fermentation and Maturation	7
	References	8
2	The Brewing Yeast	11
	Introduction	11
	Yeast Flocculation	13
	Carbohydrate Transport and Metabolism	16
	Main Glucose Repression Pathway	17
	Glucose-Sensing System—Ras/cAMP/PKA Pathway	20
	The Impact of the Glucose-Sensing System on Fermentation	22
	Transport of α -Glucosides	24
	Nitrogen Metabolism	25
	Target of Rapamycin (Tor) Pathway	25
	Nitrogen Catabolite Repression (NCR)	30
	General Amino Acid Control (GAAC)	32
	Transport and Control of Nitrogen Sources	33
	Alcoholic Fermentation	36
	References	39

3 By-products of Beer Fermentation	51
Introduction	51
Pleasant By-products	52
Higher Alcohols	52
Transamination	53
Decarboxylation	54
Reduction to Higher Alcohols	55
Regulation of Higher Alcohols	56
The Anabolic Pathway	57
Esters	58
Biosynthesis of Acetate Esters	59
Biosynthesis of Ethyl Esters	61
Ester Regulation	62
Esters in Beer Aging	62
Unpleasant By-products	63
Vicinal Diketones (VDKs)	63
Yeast Response to Fermentation Parameters	66
Yeast Strain	66
Temperature	67
Hydrostatic Pressure	68
Wort Composition	68
Sugars	68
Free Amino Nitrogen (FANs)	70
Oxygen and Unsaturated Fatty Acids (UFAs)	71
References	72

Biochemistry of Beer Fermentation

Pires, E.; Brányik, T.

2015, VI, 80 p. 9 illus. in color., Softcover
