1	Introduction	1
1.1	Dynamical Systems	2
1.1.1	Classification of dynamical systems	2
1.2	A Brief Perspective on the Development of Stability Theory	4
1.2.1	Results involving monotonic Lyapunov functions	4
1.2.2	Results involving non-monotonic Lyapunov functions	7
1.3	Scope and Contents of the Book	8
1.3.1	Chapter Contents	9
	Bibliography	15
2	Dynamical Systems	19
2.1	Notation	20
2.2	Dynamical Systems	21
2.3	Ordinary Differential Equations	22
2.3.1	Initial value problems	22
2.3.2	Existence, uniqueness, and continuation of solutions	24
2.3.3	Dynamical systems determined by ordinary differential equations	26
2.3.4	Two specific examples	27
2.4	Ordinary Differential Inequalities	29
2.5	Difference Equations and Inequalities	30
2.5.1	Difference equations	30
2.5.2	Difference inequalities	31
2.6	Differential Equations and Inclusions Defined on Banach Spaces	32
2.6.1	Differential equations defined on Banach spaces	32
2.6.2	Differential inclusions defined on Banach spaces	33
2.7	Functional Differential Equations	35
2.8	Volterra Integrodifferential Equations	39
2.9	Semigroups	42
2.9.1	Notation	43

2.9.2	C_0 -semigroups	43
2.9.3	Nonlinear semigroups	45
2.9.4	Examples of semigroups	49
2.10	Partial Differential Equations	52
2.10.1	Notation	52
2.10.2	Linear equations with constant coefficients	53
2.10.3	Linear parabolic equations with smooth coefficients	55
2.11	Composite Dynamical Systems	57
2.12	Discontinuous Dynamical Systems	59
2.12.1	Ordinary differential equations	61
2.12.2	Functional differential equations	62
2.12.3	Differential equations in Banach spaces	62
2.12.4	Semigroups	63
2.13	Notes and References	66
2.14	Problems	68
	Bibliography	75
3	Fundamental Theory: The Principal Stability and Boundedness Results on Metric Spaces	77
3.1	Some Qualitative Characterizations of Dynamical Systems	80
3.1.1	Invariant sets	80
3.1.2	Qualitative characterizations: Stability and boundedness ..	83
3.2	Discontinuous and Continuous Dynamical Systems: Results Involving Non-Monotonic Lyapunov Functions	89
3.2.1	Local stability results	90
3.2.2	Global stability and boundedness results	95
3.2.3	Instability results	100
3.3	Continuous Dynamical Systems: Results Involving Monotonic Lyapunov Functions	101
3.3.1	Local stability results	101
3.3.2	Global stability and boundedness results	104
3.3.3	Instability results	108
3.3.4	Monotonic and non-monotonic Lyapunov functions	110
3.4	Discrete-Time Dynamical Systems: Results Involving Monotonic Lyapunov Functions	112
3.4.1	Local stability results	113
3.4.2	Global stability and boundedness results	115
3.4.3	Instability results	117
3.5	Discrete-Time Dynamical Systems: Results Involving Non-Monotonic Lyapunov Functions	119
3.5.1	Local stability results	119
3.5.2	Global stability and boundedness results	120
3.5.3	Instability results	123

3.6	Converse Theorems for Discontinuous and Continuous Dynamical Systems: Results Involving Non-Monotonic Lyapunov Functions	124
3.6.1	Local results	124
3.6.2	Refinements: Continuity of Lyapunov functions	133
3.7	Converse Theorems for Continuous Dynamical Systems: Results Involving Monotonic Lyapunov Functions	139
3.7.1	Local results	139
3.7.2	Refinements: Continuity of Lyapunov functions	144
3.8	Converse Theorems for Discrete-Time Dynamical Systems: Results Involving Monotonic Lyapunov Functions	147
3.9	Converse Theorems for Discrete-Time Dynamical Systems: Results Involving Non-Monotonic Lyapunov Functions ..	152
3.10	Contrasting Results Involving Monotonic and Non-Monotonic Lyapunov Functions: Continuous-Time Dynamical Systems.....	153
3.10.1	Dynamical systems	154
3.10.2	Monotonic Lyapunov functions	157
3.10.3	Some limitations of the classical Lyapunov stability results.....	159
3.10.4	Non-monotonic Lyapunov functions.....	163
3.10.5	Smoothing non-monotonic Lyapunov functions.....	168
3.11	Contrasting Results Involving Monotonic and Non-Monotonic Lyapunov Functions: Discrete-Time Dynamical Systems	171
3.11.1	Dynamical systems	172
3.11.2	Monotonic Lyapunov functions	174
3.11.3	Some limitations of the classical Lyapunov stability results.....	176
3.11.4	Non-monotonic Lyapunov functions.....	179
3.11.5	Smoothing non-monotonic Lyapunov functions.....	182
3.12	Appendix: Some Background Material on Differential Equations ..	185
3.13	Notes and References.....	189
3.14	Problems	190
	Bibliography.....	196
4	Fundamental Theory: Specialized Stability and Boundedness	
	Results on Metric Spaces	199
4.1	Autonomous Dynamical Systems.....	200
4.2	Invariance Theory: Results Involving Monotonic Lyapunov Functions	203
4.3	Comparison Theory.....	208
4.3.1	Continuous dynamical systems.....	209
4.3.2	Discrete-time dynamical systems	213

4.4	Uniqueness of Motions	216
4.5	Notes and References	218
4.6	Problems	219
	Bibliography	224
5	Applications to a Class of Discrete-Event Systems	225
5.1	A Class of Discrete-Event Systems	225
5.2	Stability Analysis of Discrete-Event Systems	227
5.3	Analysis of a Manufacturing System	228
5.4	Load Balancing in a Computer Network	232
5.5	Notes and References	234
5.6	Problems	234
	Bibliography	235
6	Finite-Dimensional Dynamical Systems	237
6.1	Preliminaries	238
6.1.1	Dynamical systems determined by ordinary differential equations	238
6.1.2	Dynamical systems determined by ordinary difference equations	240
6.1.3	Discontinuous dynamical systems (DDS)	241
6.1.4	Qualitative characterizations: Stability and boundedness ..	242
6.1.5	Some characterizations of Lyapunov functions	244
6.1.6	Quadratic forms	248
6.1.7	Stability results involving monotonic Lyapunov functions: geometric interpretation	250
6.1.8	Non-monotonic Lyapunov functions: geometric interpretation	253
6.2	The Principal Stability and Boundedness Results for Ordinary Differential Equations (Monotonic Lyapunov Functions)	256
6.2.1	Stability	256
6.2.2	Asymptotic stability	259
6.2.3	Exponential stability	261
6.2.4	Boundedness of solutions	263
6.2.5	Instability	265
6.3	The Principal Stability and Boundedness Results for Ordinary Difference Equations (Monotonic Lyapunov Functions) .	270
6.3.1	Local stability results	270
6.3.2	Global stability and boundedness results	273
6.3.3	Instability results	277
6.4	The Principal Stability and Boundedness Results for Discontinuous and Continuous Dynamical Systems (Non-Monotonic Lyapunov Functions)	279
6.4.1	Local stability results	279
6.4.2	Global stability and boundedness results	281

6.4.3	Instability results	283
6.4.4	Examples	284
6.5	The Principal Stability and Boundedness Results for Discrete-Time Dynamical Systems (Non-Monotonic Lyapunov Functions)	294
6.5.1	Local stability results	294
6.5.2	Global stability and boundedness results	296
6.5.3	Instability results	300
6.5.4	Examples	300
6.6	Converse Theorems for Ordinary Differential Equations (Monotonic Lyapunov Functions)	303
6.6.1	Local results	303
6.6.2	Some refinements	306
6.7	Converse Theorems for Ordinary Difference Equations (Monotonic Lyapunov Functions)	313
6.8	Converse Theorems for Finite-Dimensional Discontinuous and Continuous Dynamical Systems (Non-Monotonic Lyapunov Functions)	315
6.8.1	Local results	315
6.8.2	Some refinements	317
6.9	Converse Theorems for Finite-Dimensional Discrete-Time Dynamical Systems (Non-Monotonic Lyapunov Functions)	318
6.10	Stability Results Involving Multiple Non-Monotonic Lyapunov Functions	319
6.10.1	Results involving multiple non-monotonic Lyapunov functions	320
6.10.2	An Example	323
6.11	Appendix: Some Background Material on Differential Equations ..	326
6.12	Notes and References	330
6.13	Problems	332
	Bibliography	335
7	Finite-Dimensional Dynamical Systems: Specialized Results	339
7.1	Autonomous and Periodic Systems	340
7.2	Invariance Theory (Monotonic Lyapunov Functions)	343
7.2.1	Continuous-time systems	343
7.2.2	Discrete-time systems	345
7.2.3	Examples	346
7.3	Invariance Theory for Continuous-Time Dynamical Systems: Non-Monotonic Lyapunov Functions	348
7.3.1	Preliminaries	349
7.3.2	Embedded semigroups	351
7.3.3	Embedded difference equations	359

7.4	Invariance Theory for Discrete-Time Dynamical Systems: Non-Monotonic Lyapunov Functions	363
7.4.1	Embedded semigroups	364
7.4.2	Embedded difference equations	367
7.4.3	An example	368
7.5	Domain of Attraction	370
7.6	Linear Continuous-Time Systems	374
7.6.1	Linear homogeneous systems	375
7.6.2	Linear autonomous homogeneous systems	379
7.6.3	The Lyapunov matrix equation	382
7.6.4	Periodic systems	389
7.6.5	Two-dimensional systems	390
7.7	Linear Discrete-Time Systems	396
7.7.1	Linear homogeneous systems	397
7.7.2	Linear autonomous homogeneous systems	398
7.7.3	The Lyapunov matrix equation	399
7.8	Invariance Theory for Linear Autonomous Homogeneous Systems	406
7.8.1	Continuous-time systems	406
7.8.2	Discrete-time systems	409
7.9	Perturbed Linear Systems	413
7.9.1	Preliminaries	413
7.9.2	Stability of an equilibrium (continuous-time systems)	416
7.9.3	Stability of an equilibrium (discrete-time systems)	420
7.9.4	Stable and unstable manifolds	421
7.9.5	Stability of periodic solutions	428
7.10	Comparison Theory	436
7.10.1	Continuous-time systems	436
7.10.2	Discrete-time systems	440
7.11	Appendix: Background Material on Differential Equations and Difference Equations	442
7.11.1	Linear homogeneous systems of differential equations	442
7.11.2	Linear systems with periodic coefficients	444
7.11.3	Linear nonhomogeneous systems of differential equations	448
7.11.4	Linear homogeneous systems of difference equations	448
7.11.5	Successive approximations of solutions of initial value problems	449
7.12	Notes and References	450
7.13	Problems	451
	Bibliography	456

8 Applications to Finite-Dimensional Dynamical Systems	459
8.1 Absolute Stability of Regulator Systems	460
8.1.1 Lur��'s result	462
8.1.2 The Popov criterion	463
8.2 Hopfield Neural Networks	467
8.2.1 A global result	469
8.2.2 A local result	470
8.2.3 Domain of attraction	472
8.2.4 Synchronous discrete-time Hopfield neural networks	473
8.3 Digital Control Systems	477
8.3.1 Introduction and formulation of the problem	477
8.3.2 Stability analysis of systems without quantizers	478
8.3.3 Analysis of systems with quantization nonlinearities	483
8.3.4 Examples	488
8.4 Pulse-Width-Modulated Feedback Control Systems	489
8.4.1 Introduction and formulation of the problem	489
8.4.2 Type II PWM feedback systems with Hurwitz stable plants	492
8.4.3 Examples	500
8.5 Digital Filters	503
8.5.1 A general result for discrete-time systems with state saturation nonlinearities	504
8.5.2 Results involving quadratic Lyapunov functions	506
8.5.3 Stability of digital filters with generalized overflow nonlinearities	508
8.5.4 Examples	514
8.6 Hamiltonian Systems	516
8.6.1 Linear Hamiltonian systems	516
8.6.2 Nonlinear Hamiltonian systems	522
8.6.3 Switched linear Hamiltonian systems	526
8.6.4 Switched nonlinear Hamiltonian systems	531
8.7 Notes and References	533
Bibliography	535
9 Infinite-Dimensional Dynamical Systems	539
9.1 Preliminaries	541
9.2 The Principal Lyapunov Stability and Boundedness Results for Differential Equations in Banach Spaces Involving Monotonic Lyapunov Functions	543
9.2.1 Local results	543
9.2.2 Global results	546
9.2.3 Instability	551
9.3 Converse Theorems for Differential Equations in Banach Spaces Involving Monotonic Lyapunov Functions	555

9.4	Invariance Theory for Differential Equations in Banach Spaces Involving Monotonic Lyapunov Functions.....	556
9.5	Comparison Theory for Differential Equations in Banach Spaces ..	560
9.6	Composite Systems	562
9.7	Analysis of a Point Kinetics Model of a Multicore Nuclear Reactor.....	568
9.8	Results for Retarded Functional Differential Equations Involving Monotonic Lyapunov Functions	571
9.8.1	Stability and boundedness results	572
9.8.2	Instability results	578
9.8.3	Invariance theory	582
9.8.4	Razumikhin-type theorems	584
9.9	Applications to a Class of Artificial Neural Networks with Time Delays	588
9.9.1	A global result.....	590
9.9.2	Local results	597
9.10	Discontinuous and Continuous Dynamical Systems Determined by Differential Equations in Banach Spaces: Results Involving Non-Monotonic Lyapunov Functions ...	600
9.10.1	Local stability results	601
9.10.2	Global results.....	603
9.10.3	Instability results	604
9.10.4	Converse theorems	604
9.10.5	Examples	606
9.11	Discontinuous Dynamical Systems Determined by Semigroups	616
9.11.1	DDS determined by semigroups	616
9.11.2	Qualitative characterizations of DDS	618
9.11.3	The principal stability results for DDS determined by semigroups.....	620
9.11.4	Applications	626
9.12	Notes and References.....	634
9.13	Problems	635
	Bibliography	641
	Index	643

Stability of Dynamical Systems

On the Role of Monotonic and Non-Monotonic Lyapunov
Functions

Michel, A.N.; Hou, L.; Liu, D.

2015, XVIII, 653 p. 60 illus., 14 illus. in color., Hardcover

ISBN: 978-3-319-15274-5

A product of Birkhäuser Basel
