

Contents

1	Introduction	1
2	Porcelain Tile	3
2.1	Ceramic Processing of Porcelain Tiles	5
2.1.1	Raw Materials	5
2.1.2	Clay	6
2.1.3	Kaolin	7
2.1.4	Feldspar	8
2.1.5	Pyrophyllite	8
2.1.6	Talc	8
2.1.7	Quartz	9
2.1.8	Dosage and Grinding	9
2.1.9	Spraying	10
2.1.10	Pressing	11
2.1.11	Drying	11
2.1.12	Firing	12
2.1.13	Polishing	14
	References	14
3	Solid Waste Materials	17
3.1	Definition and Classification of Solid Residues	18
3.2	Overview of Current Brazilian Legislation	18
3.3	Use of Residues in the Ceramic Industry	19
	References	21
4	Coffee Industry in Brazil	23
4.1	Coffee Processing and Refining	25
4.2	Waste from Coffee Production	27
	References	30

5	Using CBA in Ceramic Formulations	31
5.1	Raw Materials	31
5.2	Formulations	33
5.3	Standard Formulation of Supplier Company	33
5.4	Formulations with Residue R1	34
5.4.1	Formulations with Residue R2	35
5.5	Formulations with Feldspar	35
5.5.1	Preparation of Ceramic Masses	35
5.5.2	Mixing and Homogenization	36
5.5.3	Pressing	36
5.5.4	Firing	36
5.6	Characterization of Raw Materials	37
5.6.1	Chemical Analysis by X-Ray Fluorescence (XRF)	37
5.7	Mineralogical Analysis by X-Ray Diffraction (XRD)	39
5.8	Thermal Analysis	42
5.9	Particle Size Analysis	48
	References	51
6	Theoretical Analysis of Crystalline Phases	53
	References	58
7	Physical and Mechanical Properties of CBA Incorporated Material	59
7.1	Dilatometric Analysis	59
7.2	Characterization of Specimens After Firing	62
7.2.1	X-Ray Diffraction (XRD)	62
7.2.2	Open, Close and Total Porosity	63
7.2.3	Water Absorption	67
7.2.4	Linear Firing Shrinkage	69
7.2.5	Apparent Specific Mass (ASM) and Real Specific Mass (RSM)	71
7.2.6	Bending Rupture Tension (BRT)	72
7.2.7	Vitrification Curve	75
	References	77
8	Mullite and Leucite Formation	79
8.1	Scanning Electron Microscopy (SEM)	79
