

Contents

- 1 Introduction 1**
 - 1.1 Motivation 1
 - 1.2 Objectives 3
- 2 Indoor Environmental Quality 5**
 - 2.1 Introduction 5
 - 2.2 Thermal Comfort 6
 - 2.2.1 Introduction 6
 - 2.2.2 Thermal Exchanges, Thermoregulation Mechanisms and Heat Balance 7
 - 2.2.3 Factors Influencing Thermal Comfort 9
 - 2.2.4 Criteria for Thermal Comfort 11
 - 2.2.5 Adaptive Models 13
 - 2.3 Indoor Air Quality 14
 - 2.3.1 Introduction 14
 - 2.3.2 Indoor Air Pollutants 15
 - References 15
- 3 Optimization and Approximation Methods 19**
 - 3.1 Introduction 19
 - 3.2 Artificial Neural Networks 20
 - 3.3 Optimization and Evolutionary Algorithms 22
 - 3.3.1 Mathematical Formulation and Main Concepts 23
 - 3.3.2 The Weighted Sum Approach 25
 - 3.3.3 Evolutionary Algorithms 27
 - References 28
- 4 Indoor Environmental Quality in Classrooms: Case Studies 31**
 - 4.1 Introduction and Motivation 31
 - 4.2 Materials and Methods 33
 - 4.3 School Buildings and Classrooms Characterization 36

4.4	IEQ Evaluation	41
4.4.1	Winter	41
4.4.2	Mid-season	48
4.4.3	Summer	50
4.4.4	Results and Discussion	51
	References	55
5	Enclosure Optimization	59
5.1	Introduction and Motivation	59
5.2	Methodology	61
5.2.1	Model	61
5.2.2	Variables and Performance Functions	63
5.2.3	Artificial Neural Networks (ANN)	65
5.2.4	Multi-objective Optimization	66
5.2.5	Life Cycle Cost Analysis	67
5.3	Sensitivity Analysis	69
5.3.1	Evaluation of the School Building Performance	69
5.3.2	Parametric Analysis	70
5.4	Multi-objective Optimization	71
5.5	Life Cycle Cost	76
	References	78
6	Conclusions and Recommendations	81

School Buildings Rehabilitation
Indoor Environmental Quality and Enclosure
Optimization
