

Contents

1	Introduction	1
1.1	New Learning Frameworks	1
1.2	Outline	2
2	Introduction to Learning Theory	5
2.1	Empirical Risk Minimization	5
2.1.1	Assumption and Definitions	6
2.1.2	The Statement of the ERM Principle	7
2.2	Consistency of the ERM Principle	8
2.2.1	Estimation of the Generalization Error Over a Test Set	10
2.2.2	A Uniform Generalization Error Bound	11
2.2.3	Structural Risk Minimization	21
2.3	Data-Dependent Generalization Error Bounds	22
2.3.1	Rademacher Complexity	22
2.3.2	Link Between the Rademacher Complexity and the VC Dimension	23
2.3.3	Different Steps for Obtaining a Generalization Bound with the Rademacher Complexity	26
2.3.4	Properties of the Rademacher Complexity	30
3	Semi-Supervised Learning	33
3.1	Assumptions	33
3.2	Semi-Supervised Algorithms	35
3.2.1	Graphical Approaches	35
3.2.2	Generative Methods	40
3.2.3	Discriminant Models	41
3.3	Transductive Learning	44
3.3.1	Transductive Support Vector Machines	45
3.3.2	A Transductive Bound for the Voted Classifier	47
3.4	Multiview Learning Based on Pseudo-Labeling	51
3.4.1	Learning with Partially Observed Multiview Data	52
3.4.2	Multiview Self-Training	59

4	Learning with Interdependent Data	63
4.1	Pairwise Ranking Tasks	65
4.1.1	Ranking of Instances	66
4.1.2	Ranking of Alternatives	69
4.1.3	Ranking as Classification of Pairs	72
4.1.4	Other Ranking Frameworks	74
4.2	Classification of Interdependent Data	76
4.2.1	Formal Framework of Classification with Interdependent Data	76
4.2.2	Janson's Theorem and Interpretation	80
4.2.3	Generic Test Bounds	83
4.3	Generalization Bounds for Learning with Interdependent Data	84
4.3.1	Extension of McDiarmid's Theorem	85
4.3.2	The Fractional Rademacher Complexity	87
4.3.3	Estimation of the Fractional Rademacher Complexity	91
4.3.4	Application to Bipartite Ranking	94
4.3.5	Application to Ranking of Alternatives for Multiclass Data	95
	References	99
	Index	105

Learning with Partially Labeled and Interdependent
Data

Amini, M.-R.; Usunier, N.

2015, XIII, 106 p. 12 illus., Hardcover

ISBN: 978-3-319-15725-2
