

Contents

1	Introduction	1
1.1	Importance and Objectives of Inventory Control	1
1.2	Overview and Purpose of the Book	2
1.3	Framework	4
2	Forecasting	7
2.1	Objectives and Approaches	7
2.2	Demand Models	8
2.2.1	Constant Model	9
2.2.2	Trend Model	9
2.2.3	Trend-seasonal Model	10
2.2.4	Choosing Demand Model	10
2.3	Moving Average	11
2.4	Exponential Smoothing	11
2.4.1	Updating Procedure	11
2.4.2	Comparing Exponential Smoothing to a Moving Average	12
2.4.3	Practical Considerations and an Example	13
2.5	Exponential Smoothing with Trend	15
2.5.1	Updating Procedure	15
2.5.2	Practical Considerations and an Example	16
2.6	Winters' Trend-seasonal Method	17
2.6.1	Updating Procedure	17
2.6.2	Practical Considerations and an Example	18
2.7	Using Regression Analysis	19
2.7.1	Forecasting Demand for a Trend Model	19
2.7.2	Practical Considerations and an Example	20
2.7.3	Forecasts Based on Other Factors	21
2.7.4	More General Regression Models	22
2.8	Sporadic Demand	23
2.9	Box-Jenkins Techniques	23
2.10	Forecast Errors	25
2.10.1	Common Error Measures	25
2.10.2	Updating MAD or σ^2	26
		vii

2.10.3	Determining the Standard Deviation as a Function of Demand	27
2.10.4	Forecast Errors for Other Time Periods	28
2.10.5	Sales Data Instead of Demand Data	29
2.11	Monitoring forecasts	29
2.11.1	Checking Demand	30
2.11.2	Checking that the Forecast Represents the Mean	30
2.12	Manual forecasts	31
	Problems	32
3	Costs and Concepts	37
3.1	Considered Costs and Other Assumptions	37
3.1.1	Holding Costs	38
3.1.2	Ordering or Setup Costs	38
3.1.3	Shortage Costs or Service Constraints	38
3.1.4	Other Costs and Assumptions	39
3.2	Different Ordering Systems	39
3.2.1	Inventory Position	39
3.2.2	Continuous or Periodic Review	40
3.2.3	Different Ordering Policies	41
3.2.3.1	(R, Q) Policy	41
3.2.3.2	(s, S) Policy	42
4	Single-Echelon Systems: Deterministic Lot Sizing	45
4.1	The Classical Economic Order Quantity Model	45
4.1.1	Optimal Order Quantity	45
4.1.2	Sensitivity Analysis	47
4.1.3	Reorder Point	48
4.2	Finite Production Rate	48
4.3	Quantity Discounts	49
4.4	Backorders Allowed	51
4.5	Time-Varying Demand	53
4.6	The Wagner-Whitin Algorithm	54
4.7	The Silver-Meal Heuristic	57
4.8	A Heuristic that Balances Holding and Ordering Costs	59
4.9	Exact or Approximate Solution	60
	Problems	60
5	Single-Echelon Systems: Reorder Points	65
5.1	Discrete Stochastic Demand	65
5.1.1	Compound Poisson Demand	65
5.1.2	Logarithmic Compounding Distribution	68
5.1.3	Geometric Compounding Distribution	69
5.1.4	Smooth Demand	70
5.1.5	Fitting Discrete Demand Distributions in Practice	71

5.2	Continuous Stochastic Demand	72
5.2.1	Normally Distributed Demand	72
5.2.2	Gamma Distributed Demand	72
5.3	Continuous Review (R, Q) Policy—Inventory Level Distribution .	74
5.3.1	Distribution of the Inventory Position	74
5.3.2	An Important Relationship	75
5.3.3	Compound Poisson Demand	76
5.3.4	Normally Distributed Demand	76
5.4	Service Levels	79
5.5	Shortage Costs	80
5.6	Determining the Safety Stock for Given S_1	80
5.7	Fill Rate and Ready Rate Constraints	81
5.7.1	Compound Poisson Demand	81
5.7.2	Normally Distributed Demand	82
5.8	Fill Rate—a Different Approach	83
5.9	Shortage Cost per Unit and Time Unit	84
5.9.1	Compound Poisson Demand	85
5.9.2	Normally Distributed Demand	86
5.10	Shortage Cost per Unit	88
5.11	Continuous Review (s, S) Policy	89
5.12	Periodic Review—Fill Rate	91
5.12.1	Basic Assumptions	91
5.12.2	Compound Poisson Demand—(R, Q) Policy	92
5.12.3	Compound Poisson Demand—(s, S) Policy	93
5.12.4	Normally Distributed Demand—(R, Q) Policy	94
5.13	The Newsboy Model	95
5.14	A Model with Lost Sales	97
5.15	Stochastic Lead-times	99
5.15.1	Two Types of Stochastic Lead-times	99
5.15.2	Handling Sequential Deliveries Independent of the Lead-time Demand	100
5.15.2.1	Handling Independent Lead-Times	101
5.15.3	Comparison of the Two Types of Stochastic Lead-Times	102
	Problems	103
6	Single-Echelon Systems: Integration—Optimality	107
6.1	Joint Optimization of Order Quantity and Reorder Point	107
6.1.1	Discrete Demand	107
6.1.1.1	(R, Q) Policy	107
6.1.1.2	(s, S) Policy	109
6.1.2	An Iterative Technique	110
6.1.3	Fill Rate Constraint: A Simple Approach	111
6.2	Optimality of Ordering Policies	113
6.2.1	Optimality of (R, Q) Policies When Ordering in Batches	113
6.2.2	Optimality of (s, S) Policies	115
6.3	Updating Order Quantities and Reorder Points in Practice	116
	Problems	119

7	Coordinated Ordering	121
7.1	Powers-of-Two Policies	121
7.2	Production Smoothing	125
7.2.1	The Economic Lot Scheduling Problem (ELSP)	126
7.2.1.1	Problem Formulation	126
7.2.1.2	The Independent Solution	127
7.2.1.3	Common Cycle Time	128
7.2.1.4	Bomberger's Approach	129
7.2.1.5	A Simple Heuristic	130
7.2.1.6	Other Problem Formulations	132
7.2.2	Time-Varying Demand	133
7.2.2.1	A Generalization of the Classical Dynamic Lot Size Problem	133
7.2.2.2	Application of Mathematical Programming Approaches	134
7.2.3	Production Smoothing and Batch Quantities	135
7.3	Joint Replenishments	137
7.3.1	A Deterministic Model	137
7.3.1.1	Approach 1. An Iterative Technique	138
7.3.1.2	Approach 2. Roundy's 98 % Approximation	140
7.3.2	A Stochastic Model	143
	Problems	144
8	Multi-Echelon Systems: Structures and Ordering Policies	147
8.1	Inventory Systems in Distribution and Production	147
8.1.1	Distribution Inventory Systems	148
8.1.2	Production Inventory Systems	149
8.1.3	Repairable Items	150
8.1.4	Lateral Transshipments in Inventory Systems	151
8.1.5	Inventory Models with Remanufacturing	152
8.2	Different Ordering Systems	153
8.2.1	Installation Stock Reorder Point Policies and KANBAN Policies	154
8.2.2	Echelon Stock Reorder Point Policies	154
8.2.3	Comparison of Installation Stock and Echelon Stock Policies	156
8.2.4	Material Requirements Planning	160
8.2.5	Ordering System Dynamics	167
	Problems	168
9	Multi-Echelon Systems: Lot Sizing	171
9.1	Identical Order Quantities	172
9.1.1	Infinite Production Rates	172
9.1.2	Finite Production Rates	172

9.2	Constant Demand	173
9.2.1	A Simple Serial System with Constant Demand	174
9.2.2	Roundy's 98 % Approximation	178
9.3	Time-Varying Demand	182
9.3.1	Sequential Lot Sizing	182
9.3.2	Sequential Lot Sizing with Modified Parameters	184
9.3.3	Other Approaches	186
9.4	Concluding Remarks	187
	Problems	187
10	Multi-Echelon Systems: Reorder Points	191
10.1	The Clark-Scarf Model	192
10.1.1	Serial System	192
10.1.2	The Clark-Scarf Approach for a Distribution System	198
10.2	The METRIC Approach for Distribution Systems	201
10.3	Two Exact Techniques	205
10.3.1	Disaggregation of Warehouse Backorders	205
10.3.2	A Recursive Procedure	206
10.4	Optimization of Ordering Policies	208
10.5	Batch-Ordering Policies	210
10.5.1	Serial System	210
10.5.2	Distribution System	212
10.5.2.1	Some Basic Results	213
10.5.2.2	METRIC Type Approximations	214
10.5.2.3	Disaggregation of Warehouse Backorders	215
10.5.2.4	Following Supply Units through the System	215
10.5.2.5	Practical Considerations	216
10.6	Other Assumptions	217
10.6.1	Guaranteed Service Model Approach	217
10.6.2	Coordination and Contracts	218
10.6.2.1	The Newsboy Problem with Two Firms	219
10.6.2.2	Wholesale-Price Contract	219
10.6.2.3	Buyback Contract	221
	Problems	221
11	Implementation	223
11.1	Preconditions for Inventory Control	223
11.1.1	Inventory Records	223
11.1.1.1	Updating Inventory Records	224
11.1.1.2	Auditing and Correcting Inventory Records	225
11.1.2	Performance Evaluation	226
11.2	Development and Adjustments	227
11.2.1	Determine the Needs	227
11.2.2	Selective Inventory Control	228
11.2.3	Model and Reality	229

11.2.4	Step-by-Step Implementation	230
11.2.5	Simulation	231
11.2.6	Short-Run Consequences of Adjustments	231
11.2.7	Education	232
Appendix 1	235
Appendix 2	247
