

Contents

1	Introduction to Acoustics	1
1.1	Sound/Acoustics	1
1.2	Sound and Its Applications	3
1.3	Microphones	4
1.4	Selecting the Right Microphone	7
2	Basic Concepts in Probability	9
2.1	Probability Distributions and Densities of Random Variables.	9
2.2	Bernoulli Distribution	12
2.3	Random Vectors.	12
2.3.1	Joint and Marginal Distributions	12
2.3.2	Mean Vector and Correlation Matrix	13
2.3.3	Independence of Variables	15
2.3.4	Conditional Probabilities and Bayes Theorem.	15
2.4	Cross Correlation	16
3	Detection Theory	19
3.1	Neyman-Pearson Criterion	26
4	Estimation Theory	27
4.1	Least Squares Estimator.	29
4.2	Generalized Least Squares Estimator	31
4.3	Maximum Likelihood Estimator	32
4.4	Maximum a Posteriori Estimators	35
4.5	Expectation Maximization Algorithm.	36
5	Atmospheric Acoustics	45
5.1	Reflection of Spherical Waves	47
5.2	Atmospheric Refraction	52
5.3	Compensation for Propagation Delay.	54

6	Acoustic Arrays	57
6.1	Uniform Linear Arrays	58
6.1.1	Wavenumber Transforms	65
6.1.2	Beam Steering	67
6.2	Circular Arrays	68
7	Bearing Estimation Using Acoustic Arrays	73
7.1	Bearing Estimation Using Time of Arrival Information	73
7.2	Adaptive Beam Forming	78
7.2.1	DOA Estimation Using Array Null-Forming	78
7.2.2	Eigenvector Projection Based DOA Estimation	84
8	Tracking	103
8.1	Localization of a Target	105
8.2	Bayes Filter	107
8.3	Kalman Filter	110
8.4	Extended Kalman Filter	116
8.5	Unscented Kalman Filter	123
8.6	Particle Filter	127
9	Localization of Transient Events	145
9.1	Detection of Transient Events	145
9.2	Estimation of Time Delay	147
9.2.1	Generalized Correlation Method	148
9.3	Sniper Localization	152
9.3.1	Localization Using Time of Arrival (TOA)	157
9.3.2	Localization Using Time Difference of Arrival (TDOA)	159
9.3.3	Sniper Localization of Subsonic Gunfire Using Acoustic Array	161
9.3.4	Sniper Localization of Supersonic Gunfire with a Single Array of Microphones	161
9.3.5	Sniper Localization of Supersonic Gunfire with Distributed Microphones	164
10	Classifiers	177
10.1	Measurements	178
10.2	Feature Extraction	179
10.3	Decision Surfaces and Regions Using Discriminant Functions	182
10.4	Multivariate Gaussian Classifier	185
10.5	Gaussian Mixture Model (GMM)	188

10.6	Support Vector Machines (SVM)	189
10.6.1	Linearly Separable Data.	190
10.6.2	Nonlinear Decision Boundary.	195
10.7	Neural Networks.	199
11	Target Discrimination for Situational Awareness	205
11.1	Vehicle Classification	212
11.2	Detection of People Using Acoustic Signals.	217
11.2.1	Detection of Personnel Using Formants and Voice Modulation Characteristics	217
11.2.2	Personnel Detection Using the Energy in Several Bands of the Voice Spectra.	220
11.2.3	Personnel Detection Using Cadence	222
11.2.4	Personnel Detection Using Harmonics of Footfalls	224
11.3	Ultrasonic Sensor Data Analysis.	225
11.3.1	Micro-Doppler Associated with Human and Animal Motion.	225
11.3.2	Detection and Classification of Ultrasonic Data	228
12	Sensor Data Fusion.	237
12.1	Dempster-Shafer Rule of Fusion.	239
12.2	Fusion of Heterogeneous Sensor Data Using Bayesian Approach.	243
12.2.1	Decision Fusion to Achieve Specified False Alarm Rate	245
12.2.2	Fusion of Correlated Decisions.	251
	References.	255
	Index	259

Battlefield Acoustics

Damarla, T.

2015, XV, 262 p. 158 illus., 90 illus. in color., Hardcover

ISBN: 978-3-319-16035-1
