

# Contents

<b>1</b>	<b>Introduction to Turbulence</b>	<b>1</b>
1.1	Turbulent Flows	1
1.2	Control Parameters	5
1.3	Nonlinearity of the Navier-Stokes Equations.	8
1.3.1	Generation of Harmonics	9
1.3.2	Turbulence and Continuum Mechanics	12
1.3.3	Sensitivity to Initial Conditions.	12
1.3.4	A Remark About Pressure	13
1.4	Some Practical Consequences of Turbulence	15
1.4.1	Transport Efficiency	15
1.4.2	A Few Undesirable Effects.	19
1.5	Introduction to the Inviscid Linear Stability★	20
1.5.1	Rayleigh Equation★	22
1.5.2	Plane Mixing Layer★	24
1.5.3	Plane Jet★	27
1.5.4	Generalisation of the Rayleigh Equation★	27
1.6	Orr-Sommerfeld Equation★	30
<b>2</b>	<b>Statistical Description of Turbulent Flows</b>	<b>33</b>
2.1	Method of Taking Averages.	33
2.2	Reynolds Averaged Navier-Stokes Equations	35
2.2.1	The Fluid Dynamics Equations.	35
2.2.2	Averaged Equations	38
2.3	Kinetic Energy Budget of the Mean Flow	39
2.4	Kinetic Energy Budget of the Fluctuating Field	40
2.4.1	Transport Equation of Reynolds Stresses	41
2.4.2	Budget of the Turbulent Kinetic Energy	42
2.5	Turbulent Viscosity: The Boussinesq Model.	43
2.6	An Example: The Turbulent Channel Flow	46

<b>3</b>	<b>Wall-Bounded Turbulent Flows . . . . .</b>	<b>51</b>
3.1	Friction Velocity . . . . .	51
3.2	Equation for the Mean Velocity Profile . . . . .	54
3.2.1	The Plane Channel Flow . . . . .	54
3.2.2	The Boundary Layer . . . . .	56
3.3	Viscous Sublayer . . . . .	58
3.4	The Logarithmic Region . . . . .	59
3.4.1	Dimensional Analysis . . . . .	59
3.4.2	Some Examples . . . . .	62
3.4.3	The Balance Between Production and Dissipation . . . . .	63
3.4.4	Kolmogorov Length Scale . . . . .	66
3.5	The Buffer Layer . . . . .	67
3.6	Free Edges . . . . .	69
3.6.1	Turbulence Near the Free Edge of Boundary Layers . . . . .	69
3.6.2	Turbulence in the Core Region of Channels or Pipes . . . . .	73
3.6.3	Other Results . . . . .	73
3.7	Modeling for a Numerical Simulation . . . . .	76
3.7.1	Mixing Length Model . . . . .	76
3.7.2	The van Driest Model . . . . .	78
3.7.3	Asymptotic Behaviour Very Near the Wall . . . . .	78
3.8	More Complex Boundary Layers . . . . .	80
3.9	Boundary Layer Equations★ . . . . .	81
<b>4</b>	<b>Free Turbulent Flows: Jets and Wakes . . . . .</b>	<b>85</b>
4.1	Natural Development of a Free Turbulent Round Jet . . . . .	85
4.2	Self-similarity for a Round Jet . . . . .	88
4.2.1	Averaged Equations . . . . .	88
4.2.2	Thin Shear Layer Approximation . . . . .	89
4.2.3	Similarity Solution . . . . .	92
4.2.4	Expression of the Radial Profile . . . . .	94
4.2.5	Some Other Quantities . . . . .	95
4.2.6	Experimental and Numerical Results . . . . .	96
4.3	Similarity for a Plane Jet . . . . .	101
4.4	Similarity for a Plane Wake . . . . .	104
4.4.1	Far Wake Approximation . . . . .	104
4.4.2	Drag Coefficient . . . . .	106
4.4.3	Self-similar Solution for a Far Plane Wake . . . . .	107
4.5	Similarity for a Far Axisymmetric Wake . . . . .	109

<b>5</b>	<b>Vortex Dynamics</b>	113
5.1	The Biot-Savart Law	113
5.2	Vortex Stretching	115
5.3	Helmholtz's Equation	118
5.4	Two Numerical Illustrations	121
5.5	Transport Equation for the Mean Vorticity	123
5.6	Enstrophy	124
5.7	Helicity	125
5.8	Equation for the Specific Vorticity★	126
5.9	Identification of a Vortex★	127
<b>6</b>	<b>Homogeneous and Isotropic Turbulence</b>	129
6.1	Homogeneous Turbulence	129
6.1.1	Length Scales	131
6.1.2	Spectral Tensor of the Velocity Field	132
6.1.3	Spectral Tensor	133
6.1.4	One-Dimensional Spectra	135
6.1.5	Turbulent Kinetic Energy	136
6.1.6	Enstrophy and Dissipation	137
6.1.7	Rapid Distortion of the Turbulence	138
6.2	Incompressible Isotropic Turbulence	139
6.2.1	Double Velocity Correlation at a Point	140
6.2.2	Double Velocity Correlation at Two Points	141
6.2.3	Double Pressure-Velocity Correlations at Two Points	145
6.2.4	Triple Correlations of the Velocities at Two Points	146
6.2.5	Spectral Velocity Tensor	146
6.2.6	Useful Other Results	150
6.3	Experimental Realization of Isotropic Turbulence	151
6.3.1	Experimental Configuration	152
6.3.2	The Turbulence Decay	154
6.4	Particle Dispersion by Homogeneous Turbulence	156
6.4.1	Free-Space Dispersion	157
6.4.2	Longitudinal Dispersion in a Circular Pipe	160
6.5	Approximate Expression of the Dissipation for an Inhomogeneous Turbulence★	162
6.6	Helicity★	163
6.7	Proper Orthogonal Decomposition★	166
6.8	Rapid Distortion: The Case of an Axisymmetric Contraction★	173

<b>7</b>	<b>The Dynamics of Isotropic Turbulence</b>	179
7.1	Kolmogorov Theory	179
7.2	Equation of Kármán and Howarth	184
7.3	Lin Equation	186
7.4	Lin Equation Closures	188
7.5	Characteristic Times of Turbulence	190
7.5.1	The Memory Time of Turbulence	190
7.5.2	The Spectral Times of Turbulence	190
7.6	Further Details on Kolmogorov Theory★	192
7.6.1	Structure Functions of Velocity★	192
7.6.2	Refinement of Kolmogorov Theory★	195
7.6.3	Overview of the Log-normal Distribution of the Dissipation★	197
7.7	Homogeneous and Isotropic Two-Dimensional Turbulence★	200
7.8	Fourier Transform of the Navier-Stokes Equations★	205
7.9	Closure with the EDQNM Hypothesis★	207
<b>8</b>	<b>Direct and Large Eddy Simulation of Turbulent Flows</b>	211
8.1	Direct Numerical Simulation	211
8.1.1	Numerical Methods	213
8.1.2	Some Applications of DNS	217
8.2	Large Eddy Simulation	219
8.2.1	Spatial Filtering	219
8.2.2	Filtered Navier-Stokes Equations	220
8.2.3	Modelling of Subgrid Scales in LES	222
8.2.4	Closure with a Turbulent Viscosity Model	223
8.2.5	LES Based on an Explicit Relaxation Filtering	231
8.3	Classification of Partial Differential Equations★	237
8.4	Favre Filtering★	239
8.5	Compressible Large Eddy Simulation★	240
8.5.1	Filtered Navier-Stokes Equations★	240
8.5.2	Total Internal Energy Conservation★	242
8.5.3	Variant of the Energy Equation★	244
<b>9</b>	<b>Turbulence Models</b>	245
9.1	Mixing Length Models	246
9.2	The $k_t$ - $\epsilon$ Turbulence Model	247
9.2.1	Transport Equation of Turbulent Kinetic Energy	247
9.2.2	Transport Equation for Dissipation	249
9.2.3	Transport Equation of Energy	250
9.2.4	High-Reynolds-Number Form of the Model	252
9.2.5	Determination of the Constant $C_{\epsilon 2}$	253
9.2.6	Low-Reynolds-Number Form of the $k_t$ - $\epsilon$ Model	254
9.2.7	Realisability and Unsteady Simulations	255

9.3	The $k_t$ - $\epsilon$ Model for Compressible Flows . . . . .	256
9.3.1	Favre-Averaged Navier-Stokes Equation . . . . .	256
9.3.2	Compressible Form of the Dissipation Rate . . . . .	259
9.3.3	Compressible Form of the $k_t$ - $\epsilon$ Model . . . . .	260
9.4	The $k_t$ - $\omega_t$ Turbulence Model . . . . .	262
9.5	The Spalart and Allmaras Turbulence Model . . . . .	263
9.6	Concluding Remarks . . . . .	264
9.7	Equation for the Dissipation in Incompressible Homogeneous Turbulence★ . . . . .	265
9.8	Favre-Averaged Turbulent Kinetic Energy Equation★ . . . . .	266
<b>10</b>	<b>Experimental Methods . . . . .</b>	<b>269</b>
10.1	Thermal Anemometry . . . . .	269
10.1.1	Main Lines of Operation . . . . .	269
10.1.2	The Wires and Their Positions in a Turbulent Flow . . . . .	271
10.1.3	Heat Transfer Relationship for Ideal Wires . . . . .	273
10.1.4	Constant Current Anemometer . . . . .	275
10.1.5	Constant Temperature Anemometer . . . . .	279
10.1.6	Constant Voltage Anemometer . . . . .	284
10.1.7	Some Additional Remarks . . . . .	287
10.1.8	Illustrative Examples . . . . .	289
10.2	Laser Doppler Anemometry . . . . .	295
10.2.1	Principle . . . . .	295
10.2.2	The Dual-Beam LDA . . . . .	296
10.2.3	Implementation of a Dual-Beam LDA . . . . .	298
10.2.4	Additional Comments . . . . .	303
10.3	Particle Image Velocimetry . . . . .	304
10.3.1	Principle of 2D-2C PIV . . . . .	304
10.3.2	Implementation of 2D-2C PIV . . . . .	306
10.3.3	Examples of 2D-2C PIV . . . . .	311
10.3.4	2D-3C or Stereoscopic PIV . . . . .	312
