

Contents

1	Introduction	1
1.1	The Life Cycle of an Eukaryotic mRNA Molecule	1
1.2	RNA-Binding Proteins	5
1.3	RNA-Binding Proteins and Disease	7
1.4	The RNA-Binding Protein LIN28	10
1.4.1	Lin28 Inhibits miRNA Let-7 Biogenesis	11
1.4.2	Mechanism of Lin28-Let-7 Recognition	12
1.4.3	The Functional Role of Lin28 in Stem Cell Biology, Cancer and Metabolism	12
1.4.4	Lin28 Can Function Independent of Let-7	14
1.4.5	Lin28 as a Direct Regulator of mRNA Translation	14
1.5	MicroRNAs	15
1.6	<i>Cis</i> -regulatory Sequence Elements in Eukaryotes	18
1.6.1	Upstream Open Reading Frames (uORFs)	18
1.6.2	Internal Ribosome Entry Sites (IRESs)	19
1.6.3	Ribosome Frameshift Signals (RFSs)	20
1.6.4	Splicing Regulatory Elements (SREs)	21
1.6.5	Iron Response Elements (IREs)	22
1.6.6	RNA Methylation Sites	22
1.6.7	AU-Rich Elements (AREs)	24
1.6.8	Zipcodes	25
1.6.9	Polyadenylation Signals (PASs)	26
1.7	Target Site Identification of Post-transcriptional Regulators	27
1.7.1	From the Study of a Single RBP to the 'Post-transcriptional Regulatome'	32
	References	33

2	Mapping Regulatory Interactions of the RNA-Binding Protein LIN28B	49
2.1	PAR-CLIP Reproducibly Identifies Thousands of Human RNAs Directly Bound by LIN28B	49
2.2	LIN28B Binds to <i>Let-7</i> Precursors and Protein Coding Transcripts	51
2.3	Target Transcripts Are Enriched for a RGGSWG Consensus Motif	53
2.4	Individual Domain PAR-CLIP Enables Characterization of Domain Specific Target Interactions	54
2.5	LIN28B Enhances Protein Production of mRNA Target Transcripts	56
2.6	LIN28B Controls Core Cell Cycle Regulators	58
	References	59
3	Exploring the Sequence Space Contacted by the Ensemble of RNA-Binding Proteins	61
3.1	Protein Occupancy Profiling Provides Catalog of Protein-mRNA Contact Sites	62
3.2	Protein Occupancy Profiling Recapitulates AGO Binding Pattern at miRNA Target Sites	64
3.3	Protein Occupancy Profiling Reveals Widespread and Conserved Protein-mRNA Contacts	66
3.4	Putative RNA <i>Cis</i> -regulatory Elements Overlap with Trait/Disease-Associated Polymorphisms	68
3.5	The Impact of Actively Translating Ribosomes on Protein Occupancy Profiles	68
	References	71
4	Revealing Cell-Type Specific Differences in Protein Occupancy on RNA	73
4.1	Protein Occupancy Profiling in MCF7 Cells	73
4.2	Comparing Gene Expression and Protein Occupancy Profiles in MCF7 and HEK293 Cells	74
4.3	Differential Protein Occupancy Profiling Based on T-C Transitions	77
4.4	Identification of Differentially Occupied RNA Regions Between MCF7 and HEK293 Cells	78
4.5	Differentially Occupied Positions Show Distinct Secondary-Structure Characteristics and Overlap with Binding Sites of Known RBPs	81
4.6	Transcripts with Increased Protein Occupancy in MCF7 Cells Show Elevated mRNA Half-Lives	85
	References	86

5	Discussion	89
5.1	PAR-CLIP and iDo-PAR-CLIP: Challenges and Considerations	90
5.1.1	PAR-CLIP Depends on Effective Metabolic Labeling of RNA	90
5.1.2	Potential Biases in CLIP and PAR-CLIP Experiments	91
5.1.3	Individual Domain PAR-CLIP: Asymmetry Is Key	92
5.2	Controlling Background in CLIP and PAR-CLIP Experiments	93
5.2.1	The Advantage of Combining Old and New Ways to Capturing RNA Targets	93
5.2.2	The Challenge of the Next Generation: Controlling Sequencing Depth	94
5.3	Transcriptome-Wide Identification of LIN28B-Bound RNA Targets	95
5.3.1	Multiple Studies Identify Lin28A and Lin28B-Bound RNA Targets in Different Systems	95
5.3.2	From Transcriptome-Wide Lin28 Binding Sites to a Model of mRNA Recognition	97
5.3.3	A Direct Role for LIN28B in Regulating Protein Synthesis	99
5.4	The Emerging Picture: Protein Production Is Regulated by Lin28 Through <i>Let-7</i> -Dependent and <i>Let-7</i> -Independent Mechanisms	101
5.4.1	<i>Let-7</i> -Dependent Effects of Lin28	101
5.4.2	<i>Let-7</i> -Independent Effects of Lin28	102
5.4.3	Merging Two Worlds: MRNA Translation Is Directly Regulated by Lin28 and <i>Let-7</i>	102
5.5	Transcriptome-Wide Protein Occupancy Profiling	103
5.5.1	Protein Occupancy Profiling and the mRNA Bound Proteome	104
5.5.2	Characteristics of Protein Occupancy Profiles	105
5.5.3	Protein Occupancy and mRNA-Expression: A Distant Relationship?	107
5.5.4	Protein Occupancy and Ribosomes: An Unexpected Crosslinking Bias	107
5.5.5	Differential Protein Occupancy: From Crosslinks to Regulators	109
5.5.6	Transcriptome-Wide and Unbiased Identification of Novel Cis-acting RNA Elements	111

5.5.7 Lessons from the RBP-Bound mRNA Sequence
Space 111

5.5.8 Application of Protein Occupancy Profiling
and Future Directions 112
