1 Automatic Prior Shape Selection for Image Segmentation	1
WeiHong Guo, Jing Qin, and Sibel Tari	
1.1 Introduction	1
1.2 Model Description	2
1.2.1 Ambrosio-Tortorelli Approximation of Mumford-Shah Segmentation Functional	2
1.2.2 Shape Descriptor Library	3
1.2.3 Proposed Segmentation Model	5
1.3 Experiments	6
1.4 Conclusion	7
References	8
2 A Scalable Fluctuating Distance Field: An Application to Tumor Shape Analysis	9
R. Alp Guler, Andac Hamamci, and Gozde Unal	
2.1 Introduction	9
2.2 Scalable Fluctuating Distance Field	12
2.2.1 Energy Terms	12
2.2.2 A Sign Constraint to Control Fluctuation Scale	13
2.2.3 A Space of Fluctuation Scales	15
2.2.4 Interactive Tumor Protrusion Segmentation	18
2.3 Tumor Follow-Up Registration Using ω Fields	19
2.3.1 Registration Results and Discussion	20
2.4 Conclusion	23
References	23

3	Part-Aware Distance Fields for Easy Inbetweening in Arbitrary Dimensions	27
	Sibel Tari	
3.1	Introduction	27
3.2	Computing the Field	28
3.2.1	The Interior Field: Spectral Perspective	29
3.2.2	The Right Hand Side \mathbf{b}	31
3.3	Experimental Results	31
3.4	Some Discussions	35
	References	38
4	A Biomechanical Model of Cortical Folding	41
	Sarah Kim and Monica K. Hurdal	
4.1	Introduction	41
4.2	Biomechanical Model	43
4.2.1	Brain Model Structure and Material Properties	44
4.2.2	Elasticity Theory and Finite Element Formulation	44
4.3	Results and Discussion	46
4.3.1	Tension Pulling Interconnected Regions	46
4.3.2	Tangential Versus Radial Tension Direction	48
4.3.3	Effects Due to Domain Size	50
4.4	Conclusions	52
	Appendix	53
	References	54
5	Quantification and Visualization of Variation in Anatomical Trees	57
	Nina Amenta, Manasi Datar, Asger Dirksen, Marleen de Bruijne, Aasa Feragen, Xiaoyin Ge, Jesper Holst Pedersen, Marylesa Howard, Megan Owen, Jens Petersen, Jie Shi, and Qiuping Xu	
5.1	Introduction	58
5.1.1	Tree-Space	59
5.1.2	The Fréchet Mean in Tree-Space	60
5.2	Related Work	61
5.2.1	Local Significant Differences	61
5.2.2	Low-Distortion Embeddings	62
5.3	Quantification and Visualization of Local Tree-Shape Differences	63
5.3.1	Permutation Tests for Subtree Statistics	64
5.3.2	Subtree Classification	66
5.3.3	Subtree Variance Correlation Testing	69
5.4	Visualization of NPC Information Spaces via Low-Distortion Embedding into the Hyperbolic Disc	71
5.4.1	Experiments on Real and Synthetic Data	72
5.5	Discussion and Conclusion	76
	References	77

6	Skeleton-Based Recognition of Shapes in Images via Longest Path Matching	81
	Gulce Bal, Julia Diebold, Erin Wolf Chambers, Ellen Gasparovic, Ruizhen Hu, Kathryn Leonard, Matineh Shaker, and Carola Wenk	
6.1	Introduction	82
6.2	Background	83
6.2.1	The Medial Axis	83
6.2.2	Shape Recognition Using the Medial Axis	83
6.2.3	Map-Matching	84
6.2.4	$H^{1/2}$ -Type Multiscale Curve Metric	85
6.3	Method	87
6.3.1	Extracting Medial Axes From “Known” Images	87
6.3.2	Extracting Voronoi Edges from “Unknown” Input Images	87
6.3.3	Matching via Weak Fréchet Distance	90
6.3.4	Matching via an $H^{1/2}$ -Type Metric	91
6.4	Results	91
6.4.1	Weak Fréchet Map-Matching Distance Results	92
6.4.2	$H^{1/2}$ Metric Results	95
6.5	Discussion and Future Directions	95
6.5.1	Analysis of the Weak Fréchet Map-Matching Distance	96
6.5.2	Analysis of the $H^{1/2}$ -Type Metric	96
6.5.3	Future Work	97
	References	98
7	Revisiting Skeletons from Natural Images	101
	Erkut Erdem and Sibel Tari	
7.1	Introduction	101
7.1.1	A Modified v	103
7.2	From Images to Skeleton Pieces	104
7.3	From Skeletons to Image Patches	106
7.4	Experimental Results	109
7.4.1	Experimental Comparison to Kimia’s Method	109
7.4.2	Application to Figure-Ground Separation	111
	References	112
8	Towards Automated Filtering of the Medial Axis Using the Scale Axis Transform	115
	Jeannine Abiva and Lisa J. Larsson	
8.1	Introduction	115
8.2	Previous Work	116
8.2.1	The Scale Axis Transform	117
8.2.2	Shape Distance	118
8.2.3	Boundary Noise	120
8.2.4	Mesecina	121

8.3	Optimal Scale Factors	121
8.3.1	Perturb Shapes by Noise	122
8.3.2	Filter Noisy Shapes with the SAT Algorithm	122
8.3.3	Compute the Distance to the Original Shape	123
8.3.4	Find the Optimal Scaling	123
8.4	Results for Six Test Shapes	124
8.5	Discussion	126
	References	127
9	Identifying Perceptually Salient Features on 2D Shapes	129
	Lisa J. Larsson, Géraldine Morin, Antoine Begault, Raphaëlle Chaine, Jeannine Abiva, Evelyne Hubert, Monica Hurdal, Mao Li, Beatriz Paniagua, Giang Tran, and Marie-Paule Cani	
9.1	Introduction	130
9.2	Previous Work	131
9.2.1	The Medial Axis Transform	131
9.2.2	Identifying Salient Features	132
9.3	User Study on Shape Feature Perception	133
9.4	Perceptually-Based Geometric Feature Detection	137
9.4.1	Junctions in the Medial Axis	137
9.4.2	Changes in Radius	138
9.4.3	Resulting Geometric Algorithm	138
9.5	Towards Multi-resolution Feature Detection	140
9.5.1	Using the Scale Axis Transform	140
9.5.2	Length-Weighted SAT	141
9.5.3	Area-Weighted SAT	143
9.6	Algorithm Results and Comparisons	147
9.7	Discussion and Conclusion	152
