## Part I Mean-Variance Portfolio Analysis

<b>1</b>	<b>Portfolio Selection: Introductory Comments</b>	3
1.1	Asset Prices and Returns	3
1.2	Investor's Portfolio: Long and Short Positions	4
1.3	Return on a Portfolio	5
1.4	Mathematical Notation	8
<b>2</b>	<b>Mean-Variance Portfolio Analysis: The Markowitz Model</b>	11
2.1	Basic Notions	11
2.2	Optimization Problem: Formulation and Discussion	13
2.3	Assumptions	15
2.4	Efficient Portfolios and Efficient Frontier	16
<b>3</b>	<b>Solution to the Markowitz Optimization Problem</b>	19
3.1	Statement of the Main Result	19
3.2	Discussion	21
3.3	Proof of the Main Result	23
<b>4</b>	<b>Properties of Efficient Portfolios</b>	27
4.1	Mean and Variance of the Return on an Efficient Portfolio	27
4.2	Description of the Efficient Frontier	29
4.3	A Fund Separation Theorem	30
<b>5</b>	<b>The Markowitz Model with a Risk-Free Asset</b>	33
5.1	Data of the Model	33
5.2	Portfolio Optimization with a Risk-Free Asset	36
5.3	Solution to the Portfolio Selection Problem	38
<b>6</b>	<b>Efficient Portfolios in a Market with a Risk-Free Asset</b>	43
6.1	Expectations and Variances of Portfolio Returns	43
6.2	Efficient Frontier and the Capital Market Line	44
6.3	Tangency Portfolio	46
6.4	A Mutual Fund Theorem	50

<b>7</b>	<b>Capital Asset Pricing Model (CAPM)</b> .....	53
7.1	A General Result .....	53
7.2	An Equilibrium Approach to the CAPM .....	55
7.3	The Sharpe-Lintner-Mossin Formula .....	59
<b>8</b>	<b>CAPM Continued</b> .....	61
8.1	Security Market Line and the Pricing Formula .....	61
8.2	CAPM as a Factor Model .....	62
8.3	Applying Theory to Practice: Sharpe's and Jensen's Tests .....	64
<b>9</b>	<b>Factor Models and the Ross-Huberman APT</b> .....	69
9.1	Single- and Multi-Factor Models .....	69
9.2	Exact Factor Pricing .....	71
9.3	Ross-Huberman APT: Model Description .....	76
9.4	Formulation and Proof of the Main Result .....	78
<b>10</b>	<b>Problems and Exercises I</b> .....	83
 <b>Part II Derivative Securities Pricing</b>		
<b>11</b>	<b>Dynamic Securities Market Model</b> .....	105
11.1	Multi-Period Model of an Asset Market .....	105
11.2	Basic Securities and Derivative Securities .....	108
11.3	No-Arbitrage Pricing: Main Result .....	110
11.4	The No-Arbitrage Hypothesis and Net Present Value .....	112
<b>12</b>	<b>Risk-Neutral Pricing</b> .....	115
12.1	Risk-Neutral Measures .....	115
12.2	Fundamental Theorem of Asset Pricing .....	117
12.3	Asset Pricing in Complete Markets .....	119
<b>13</b>	<b>The Cox–Ross–Rubinstein Binomial Model</b> .....	125
13.1	The Structure of the Model .....	125
13.2	Completeness of the Model .....	127
13.3	Constructing a Risk-Neutral Measure .....	129
13.4	Examples .....	132
<b>14</b>	<b>American Derivative Securities</b> .....	137
14.1	The Notion of an American Derivative Security .....	137
14.2	Risk-Neutral Pricing of American Derivative Securities .....	139
14.3	The Pricing Algorithm .....	142
<b>15</b>	<b>From Binomial Model to Black–Scholes Formula</b> .....	145
15.1	Drift and Volatility .....	145
15.2	Modelling the Price Process .....	146
15.3	Binomial Approximation of the Price Process .....	147
15.4	Derivation of the Black–Scholes Formula .....	150
<b>16</b>	<b>Problems and Exercises II</b> .....	157

## Part III Growth and Equilibrium

<b>17 Capital Growth Theory</b>	169
17.1 Growth-Optimal Investments	169
17.2 Strategies in Terms of Investment Proportions	171
17.3 Results for Simple Strategies	173
<b>18 Capital Growth Theory: Continued</b>	177
18.1 Log-Optimal Strategies	177
18.2 Growth-Optimal and Numeraire Strategies	179
18.3 Growth-Optimality for General Strategies	180
18.4 Volatility-Induced Growth	183
<b>19 General Equilibrium Analysis of Financial Markets</b>	187
19.1 Walrasian Equilibrium	187
19.2 On the Existence of Equilibrium	190
19.3 Rational Expectations and Equilibrium Pricing	192
19.4 Arbitrage and Equilibrium	194
<b>20 Behavioral Equilibrium and Evolutionary Dynamics</b>	197
20.1 A Behavioral Evolutionary Perspective	197
20.2 Survival Strategies	201
20.3 Links to the Classical Theory	203
<b>21 Problems and Exercises III</b>	205

## Mathematical Appendices

<b>A Facts from Linear Algebra</b>	215
<b>B Convexity and Optimization</b>	219
<b>Sources</b>	223

Mathematical Financial Economics

A Basic Introduction

Evstigneev, I.; Hens, T.; Schenk-Hoppé, K.R.

2015, IX, 224 p. 21 illus., 3 illus. in color.,
