

Contents

1	Fundamental Theorems and Equations of Electromagnetism	1
1.1	Properties of the Nabla Vector Linear Operator	1
1.2	Solenoidal and Irrotational fields	2
1.3	Fundamental Theorems of Vector Analysis	3
1.4	Physical Dimensions and Notation of the Quantities Treated in the Text.	4
1.5	Maxwell's Equations and Continuity Conditions.	4
1.6	Duality Principle and Impressed Sources.	7
1.7	Constitutive Relations.	8
1.8	Boundary Conditions	12
1.9	Polarization of Vectors	16
1.10	Maxwell's Equations and Constitutive Relations in Frequency Domain	19
1.11	Dispersive Media	20
1.12	Poynting's Theorem	25
	1.12.1 Poynting's Theorem in the Time Domain	25
	1.12.2 Poynting's Theorem in the Frequency Domain.	28
1.13	Uniqueness Theorem	35
	1.13.1 Uniqueness Theorem in the Time Domain.	35
	1.13.2 Uniqueness Theorem in the Frequency Domain	37
1.14	Wave Equation	39
	1.14.1 Helmholtz Equation	41
1.15	Electromagnetic Potentials.	42
2	Properties of Plane Electromagnetic Waves	47
2.1	Wave Functions	47
2.2	Plane Waves	49

2.3	General Properties of Plane Waves	53
2.3.1	Uniform Non-attenuated Plane Wave	57
2.3.2	Non-uniform Plane Wave Attenuated Perpendicularly to the Direction of Propagation	59
2.3.3	Uniform Attenuated Plane Waves	61
2.4	Spectrum of Plane Waves	63
2.4.1	Electric Field of a Monochromatic Wave in a Half-Space	65
2.5	Non-monochromatic Plane Waves	67
2.5.1	Beat Velocity	67
2.5.2	Group Velocity of a Wave Packet	69
2.5.3	Bandwidth Relation	72
2.6	Reflection and Transmission of Plane Waves at a Plane Interface: Normal Incidence	73
2.7	Reflection and Transmission (Refraction) of Plane Waves at a Plane Interface: Oblique Incidence	80
2.7.1	Horizontal Polarization	82
2.7.2	Vertical Polarization	85
2.7.3	Total Reflection	88
2.7.4	Reflection and Transmission from Conductors, Leontovich's Condition	93
3	Introduction to Transmission Lines	97
3.1	Transmission Line Equations, Primary and Secondary Constants, Boundary Conditions	97
3.2	Impedance, Admittance, Reflection Coefficient	104
3.3	Standing-Wave Ratio	109
3.4	Anti-reflective Layers	111
4	Guided Electromagnetic Propagation	115
4.1	General Relations of Waveguides	115
4.1.1	TE Fields	118
4.1.2	TM Fields	120
4.1.3	TEM Fields	123
4.2	Boundary Conditions for Metallic Waveguides. Propagation Modes	125
4.3	The Guided Propagation as an Eigenvalue Problem	126
4.4	Rectangular Waveguide	134
4.5	Waveguides of Circular Section	140
4.5.1	TE and TM Modes in Circular Metallic Waveguides	143
4.5.2	TEM Mode for the Coaxial Metallic Cable	144
4.6	Cavity Resonators	145
4.6.1	Cylindrical Resonator	148

5 Green's Functions	151
5.1 Non-homogeneous Helmholtz Equation, Deterministic Problem.	151
5.2 Definition and Properties of the Green's Function	153
5.3 Boundary Conditions at Infinity for Free Space	156
5.4 Green's Function Calculation for the Helmholtz Equation in Free Space	159
5.5 Electromagnetic Field Produced by a Distribution of Impressed Currents in the Presence of a Metallic Body	164
Bibliography	167
Index	169

A Primer on Electromagnetic Fields

Frezza, F.

2015, XI, 171 p. 20 illus., Hardcover

ISBN: 978-3-319-16573-8
