1	Introduction	1
1.1	Advantages of the Seismic Ray Method	2
1.2	Drawbacks of the Seismic Ray Method	3
1.3	Numerical Solutions of the Seismic Wave Equation	4
1.4	A Brief History of HPC Technology	7
	References	11
2	Anelastic Wave Propagation (AWP)	15
2.1	Formulation	17
2.1.1	Elastic Media	17
2.1.2	Viscoelastic Media	18
2.1.3	Discretization	31
2.1.4	Free-Surface Boundary	34
2.1.5	PML Boundary	36
2.1.6	Internal Welded Material Interfaces	40
2.1.7	Source Representation	42
2.2	Software	43
2.2.1	Mesh Generation	45
2.2.2	Structural Model	49
2.2.3	Parameter File	53
2.2.4	Sources and Receivers	57
2.2.5	Recording Grid Points	64
2.2.6	Wavefield Simulation	66
2.2.7	Synthetic Seismograms	70
2.2.8	Half-Space Example Summary	73
2.3	Application	77
2.3.1	SCEC Community Velocity Models (CVMs)	77
2.3.2	Earthquake Source Models	78
2.3.3	Validation of SCEC CVMs	79

3	Green's Functions	91
3.1	Mathematical Preliminary	91
3.1.1	Vector Spaces	91
3.1.2	Inner Product	92
3.1.3	Linear Transformations	97
3.1.4	Hilbert Spaces	101
3.1.5	Functions As Vectors	105
3.1.6	Dirac Delta Function	106
3.1.7	Fourier Transforms	111
3.1.8	Operator Algebra	113
3.1.9	Fréchet Derivative	119
3.2	The Adjoint of a Differential Operator	123
3.2.1	Ordinary Differential Operators	125
3.2.2	Partial Differential Operators	127
3.2.3	Scalar Wave Equations	129
3.2.4	Gradient, Divergence and Curl	131
3.2.5	Viscoelastic Equation of Motion	133
3.2.6	Adjoint Initial and Boundary Conditions	138
3.3	Properties of Green's Functions	146
3.3.1	Adjoint Green's Functions	147
3.3.2	Reciprocity	149
3.3.3	Inhomogeneous Initial/Boundary Conditions	154
3.4	Receiver Green's Tensor (RGT)	162
3.4.1	Time-Reversed Adjoint Green's Tensor	164
3.4.2	Receiver-Side Strain Green's Tensor (RSGT)	165
3.4.3	RSGTs in the Half-Space Example	168
3.5	Born Series	174
3.5.1	The Scalar Wave Equation	176
3.5.2	The Anisotropic Viscoelastic Wave Equation	186
	References	189
4	Data Sensitivity Kernels	191
4.1	Definition	192
4.2	Data Functionals	194
4.2.1	Data Functionals for $\nabla \times \mathbf{u}$ and $\nabla \cdot \mathbf{u}$	195
4.2.2	Filtered RGT	196
4.2.3	The Chain Rule	198
4.2.4	Time-Domain Waveform Differences	200
4.2.5	Frequency-Domain Waveform Differences	203
4.2.6	Broadband Cross-Correlation Measurements	206
4.2.7	Frequency-Dependent Phase and Amplitude Misfits	213
4.2.8	Rytov Approximation	225
4.2.9	"Banana-Doughnut" Structure of Rytov Phase Kernels	231
4.3	Model Parameterization	234
4.3.1	Bulk Modulus	234

4.3.2	Bulk and Shear Moduli	236
4.3.3	Lamé Parameters	239
4.3.4	P- and S-wave Velocities	243
4.3.5	Love's Elastic Parameters (Hexagonal Symmetry)	247
4.3.6	Asymptotic Parameters (Triclinic Symmetry)	252
4.3.7	Anelastic Attenuation Quality Factors	257
4.3.8	Finite Moment Tensor (FMT)	266
4.4	Software	273
4.4.1	WPK File	275
4.4.2	Kernel Calculation	277
4.4.3	Kernel Output and Visualization	282
4.4.4	More Kernel Examples	285
