

Contents

1 Preliminary Facts	1
1.1 Lattices, Brillouin Zones, and Periodic Functions in \mathbb{R}^d	1
1.2 Schrödinger Operator and Bloch Functions	7
1.3 Band Structure, Fermi Surfaces and Perturbations	15
1.4 Some Discussions of the Perturbation Theory	24
References	29
2 Asymptotic Formulas for the Bloch Eigenvalues and Bloch Functions	31
2.1 Introduction	31
2.2 Asymptotic Formulas for the Eigenvalues	46
2.3 Bloch Eigenvalues Near the Diffraction Planes	58
2.4 Asymptotic Formulas for the Bloch Functions	79
2.5 Simple Sets and Isoenergetic Surfaces	85
2.6 Bloch Functions Near the Diffraction Hyperplanes	106
References	125
3 Constructive Determination of the Spectral Invariants	127
3.1 Introduction and Preliminary Facts	127
3.2 First and Second Terms of the Asymptotics	131
3.3 On the Derivatives of the Band Functions	142
3.4 The Construction of the Spectral Invariants	151
References	169
4 Periodic Potential from the Spectral Invariants	171
4.1 Introduction	171
4.2 On the Simple Invariants	178
4.3 Finding the Fourier Coefficients Corresponding to the Boundary	187

4.4	Inverse Problem in a Dense Set	197
4.5	Finding the Simple Potential from the Invariants	202
4.6	On the Stability of the Algorithm	209
4.7	Uniqueness Theorems	216
	References	225
5	Conclusions	227
	References	238
Index	241

Multidimensional Periodic Schrödinger Operator
Perturbation Theory and Applications

Veliev, O.

2015, X, 242 p., Hardcover

ISBN: 978-3-319-16642-1
