

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Water Pollution	2
1.2	Role of Clay Minerals in Environment Protection	3
	References	4
<b>2</b>	<b>Natural Clay Minerals as Environmental Cleaning Agents</b>	<b>5</b>
2.1	Types, Structures, and Characteristics of Clay Minerals	6
2.1.1	Types and Classifications of Clay Minerals	6
2.1.2	Structures and Characteristic of Clay Minerals	9
2.1.3	Properties of Clay Minerals	14
2.2	Selective Pollutant Gas Adsorption by Clay Minerals	16
2.3	Adsorption of Hazardous Substances from Aqueous Solution Using Clay Minerals	18
2.3.1	Adsorption of Heavy Metals	18
2.3.2	Adsorption of Dyes	21
2.3.3	Adsorption of Antibiotics	25
2.3.4	Adsorption of Biocides and Other Organic Compounds	27
2.4	Application Clay Minerals as Cleaning Agents in Aquaculture and Other Systems	28
	References	31
<b>3</b>	<b>Modification of Clay Minerals for Adsorption Purpose</b>	<b>39</b>
3.1	Modification of Clay Minerals Using Acids, Bases, and Salts	40
3.1.1	Acid-Leached Clay Minerals	40
3.1.2	Impregnation Clay Minerals with Base and Salts	41
3.2	Modification of Clay Minerals Using Surfactant	42
3.2.1	Cationic Surfactants	43
3.2.2	Anionic Surfactants	45
3.2.3	Nonionic Surfactants	46

3.2.4	Gemini Surfactants . . . . .	47
3.2.5	Natural Surfactants . . . . .	48
3.3	Clay Composite Materials for Environmental Remediation . . . . .	50
	References . . . . .	52
<b>4</b>	<b>The Equilibrium Studies in the Adsorption of Hazardous</b>	
	<b>Substances Using Clay Minerals . . . . .</b>	<b>57</b>
4.1	Langmuir Isotherm . . . . .	58
4.2	Freundlich Isotherm . . . . .	62
4.3	Other Two Parameters Isotherms . . . . .	64
4.3.1	Dubinin Radushkevich Equation . . . . .	64
4.3.2	Temkin Isotherm . . . . .	66
4.3.3	Flory–Huggins Isotherm . . . . .	66
4.3.4	Brunauer-Emmet-Teller (BET) Model . . . . .	67
4.4	Three Parameters Isotherms . . . . .	69
4.4.1	Sips Isotherm . . . . .	69
4.4.2	Toth Model . . . . .	71
4.4.3	Redlich–Peterson (R–P) Isotherm . . . . .	71
4.5	Temperature Dependent Forms . . . . .	72
4.5.1	Langmuir Isotherm . . . . .	73
4.5.2	Freundlich Isotherm . . . . .	75
4.5.3	Sips Isotherm . . . . .	76
4.5.4	Toth Model . . . . .	77
4.6	Multicomponent Models . . . . .	79
4.6.1	Extended Langmuir Isotherm and Its Modified Forms . . . . .	80
4.6.2	Freundlich Multicomponent Adsorption Isotherm . . . . .	85
4.7	Thermodynamics of Adsorption . . . . .	86
	References . . . . .	88
<b>5</b>	<b>The Characterization of Clay Minerals and Adsorption</b>	
	<b>Mechanism onto Clays . . . . .</b>	<b>93</b>
5.1	Nitrogen Sorption . . . . .	94
5.2	X-Ray Diffraction . . . . .	100
5.3	SEM Analysis . . . . .	104
5.4	FTIR Analysis . . . . .	108
	References . . . . .	109
<b>6</b>	<b>The Kinetic Studies in the Adsorption of Hazardous</b>	
	<b>Substances Using Clay Minerals . . . . .</b>	<b>113</b>
6.1	The Pseudo-first Order Kinetic . . . . .	114
6.2	The Pseudo-second Order Kinetic . . . . .	116
6.3	Intraparticle Diffusion Model . . . . .	118
	References . . . . .	118
	<b>Index . . . . .</b>	<b>121</b>

Clay Materials for Environmental Remediation

Ismadji, S.; Soetaredjo, F.E.; Ayucitra, A.

2015, VIII, 124 p. 24 illus., 16 illus. in color., Softcover

ISBN: 978-3-319-16711-4
