

Contents

1	Multi-scale Modeling and Simulation of Polymer Flow	1
1.1	Introduction	1
1.1.1	Rheology and Structure	1
1.1.2	A Hierarchy of Modeling Approaches	2
1.1.3	The Role of Computational Rheology	4
1.2	Macroscopic Modeling and Simulations	5
1.2.1	Governing Equations and Numerical Challenges	6
1.2.2	A Spectrum of Numerical Methods and Applications	8
1.3	Multi-scale Kinetic Theory of Viscoelastic Flow	9
1.3.1	Probability Distribution of Molecular Configurations	9
1.3.2	Fokker-Planck Equation and Kramers Relation	10
1.3.3	Exploiting the Multi-scale Model: Three Basic Approaches	12
1.3.4	Illustrative Examples of Kinetic Theory Models	13
1.4	Micro-Macro Simulations Using the Stochastic Approach	17
1.4.1	CONNFESSIT	17
1.4.2	Numerical Challenges	18
1.4.3	Brownian Configuration Fields	20
1.4.4	Lagrangian Particle Methods	21
1.4.5	Variance Reduction	23
1.5	Micro-Macro Simulations Using the Fokker-Planck Approach	23
1.5.1	Proper Generalized Decomposition	24
1.5.2	PGD Simulations of the Multi-bead-Spring FENE Model	25
1.5.3	Fokker-Planck Simulations of Complex Flows	27
1.6	The Impact of Closure Approximations	28
1.7	Illustrative Examples of Complex Flow Simulations	31
1.7.1	Early Macroscopic Simulations	31
1.7.2	Macroscopic Simulations with Advanced Models	33
1.7.3	Impact of Closure Approximations in Complex Flows	36

1.8	Discussion	36
1.8.1	From Numbers to Rheology	37
1.8.2	The Infamous HWNP and Mesh Convergence	38
1.9	Conclusions	39
	References	40
2	Complex Flows of Micro/Nano Structured Fluids:	
	Reinforced Polymer Composites	43
2.1	Introduction	43
2.2	Dilute and Semi-dilute Suspensions	46
2.2.1	Multi-scale Description of Non-brownian Rod Suspensions	46
2.2.2	Multi-scale Description of Brownian Rods Suspensions	52
2.2.3	Semi-concentrated Regime	58
2.3	Processing Flow Simulation	59
2.3.1	Fixed Mesh Description of the Fluid Domain Evolution and Flow Front Tracking by Using a Volume of Fluid—VoF—Technique	60
2.3.2	Updated Lagrangian Meshless Simulation	65
2.4	Concentrated Suspensions Involving Rod Clusters	69
2.4.1	Rigid Clusters	69
2.4.2	Deformable Clusters	74
2.5	Advanced Topics	80
2.5.1	On the Solution of the Fokker-Plank Equation	80
2.5.2	Descriptions Based on Higher-Order Kinematics	84
2.5.3	Accounting for Rod Bending	90
2.5.4	Delaying Orientation Mechanisms	96
2.5.5	Collective Effects	98
2.5.6	Orientation Induced by an Electric Field	101
	References	105
3	Flows of Simple Fluids in Complex Microstructures:	
	Composite Processing of Structural Polymer Composites	109
3.1	Introduction	109
3.2	Description of Fibrous Microstructures in Composites	113
3.2.1	Monodisperse Porosity Medium	115
3.2.2	Bidisperse Porosity Medium	119
3.3	Governing Equations for Flows in Porous Media	121
3.3.1	Pore-Scale Isothermal Flow Description	122
3.3.2	Macroscopic Scale: Upscaling	122

3.4	Flow of Simple Fluids in Non-deformable Fibrous Microstructures	128
3.4.1	Negligible Inertia and Single-Scale Porosity Medium	128
3.4.2	Negligible Inertia and Double-Scale Porosity Medium	132
3.4.3	Fluid Inertia	134
3.5	Flow of Complex Fluids in Non-deformable Fibrous Microstructures	135
3.5.1	Slightly Compressible Fluids	135
3.5.2	Reactive Fluids	137
3.6	Numerical Simulation	138
