Part I Modeling and Analysis

1	Introduction	3
1.1	Distributed Generation	3
1.1.1	Technology	3
1.1.2	Value of Distributed Generation	5
1.1.3	Applications and Issues	5
1.1.4	Distributed Resources	6
1.1.5	Distributed Capacity	7
1.1.6	Factors of DG Growth	7
1.1.7	Impacts on Transmission System Operation	9
1.1.8	General Structure	10
1.1.9	Integrating Distributed Energy Resources	12
1.2	Supply–Demand in Electric Power Grid	12
1.2.1	Understanding the Grid	12
1.2.2	Reliability Concepts	13
1.2.3	Electric Power Dynamic Demand	14
1.2.4	The Need for Spinning Reserve	14
1.2.5	Local Load Control	15
1.2.6	Ancillary Services	15
1.2.7	Implementation Issues	15
1.3	Overview of Microgrids	16
1.3.1	Control Tasks	18
1.3.2	A Classification	19
1.3.3	Control Objectives and Methods	21
1.3.4	Microsource Control	23
1.3.5	Control and Protection Requirements	25
1.3.6	Reliable and Economical Operation	26
1.4	Smart Grid	26
1.4.1	Efficiency and Reliability	27
1.4.2	Environmental Benefits	28

1.4.3	Benefits to Consumers	28
1.4.4	Security	29
1.5	Technical Aspects	29
1.5.1	Two-Way Communications	29
1.5.2	Control and Monitoring Techniques	30
1.5.3	Advanced Components	30
1.5.4	Energy Storage	31
1.5.5	Robust Energy Management	33
1.6	DC Microgrids	35
1.6.1	PV Sources Control	36
1.6.2	Storage Control	37
1.6.3	Grid Connection Control	38
1.6.4	DC Load Control	38
1.6.5	Power Balancing Principle	38
1.7	Outline of the Book	39
1.7.1	Methodology	39
1.7.2	Chapter Organization	40
	References	41
2	Distributed Generation Plants	47
2.1	Combined Heat and Power Plants	47
2.1.1	Introduction	47
2.1.2	Microcogeneration Systems	48
2.1.3	Internal Combustion Engines	49
2.1.4	Stirling Engines	49
2.1.5	Microturbines	51
2.1.6	Fuel Cells	53
2.2	Renewable Energy Generation	55
2.2.1	Wind Power Plants	55
2.2.2	Small-Scale Hydrogeneration	57
2.3	Solar Photovoltaic Generation	58
2.3.1	Technology Basics	59
2.3.2	Grid-Connected Solar Systems	60
2.3.3	Future Trends	61
2.4	Small Wind Turbine Systems	62
2.4.1	Types of Wind Turbine Systems	63
2.4.2	Wind Turbine Fundamentals	66
2.4.3	Control Loops	67
2.4.4	Generator Side Control	68
2.4.5	Boost Converter Control	68
2.4.6	Rectifier Control	70
2.5	Storage Technologies	70
2.5.1	Classification of Electrical Energy Storage	71
2.5.2	Mechanical Storage Systems	72

2.5.3	Batteries	72
2.5.4	Flywheels	73
2.5.5	Superconducting Magnetic Energy Storage.	73
2.5.6	Supercapacitors.	74
2.6	Inverter Interfaces	74
2.6.1	Voltage Source Inverters	74
2.6.2	Inverter Realization for Microsources	76
2.6.3	Inverter Realization	76
2.6.4	Unbalanced AC Voltages.	77
2.7	Conclusions	78
2.8	Suggested Problems	78
	References.	84

Part II Architectures and Integration

3	Control Methods for Microgrids	89
3.1	Introduction	89
3.2	Microgrids	90
3.2.1	Definition and Applications	90
3.2.2	Control Functions	91
3.2.3	Components and Formation	92
3.2.4	Overview of Modeling.	94
3.2.5	Modes of Operation	103
3.3	Control Approaches.	104
3.3.1	Control of Grid-Connected Mode	104
3.3.2	Power Flow Control by Current Regulation	105
3.3.3	Power Flow Control by Voltage Regulation	105
3.3.4	Agent-Based Control.	106
3.3.5	Distributed Control	107
3.3.6	H_{∞} Control	109
3.3.7	Autonomous/Islanded Mode.	109
3.3.8	PQ and VSI Control	110
3.3.9	Autonomous Control.	112
3.3.10	New $Q-\dot{V}$ Droop Control.	112
3.3.11	Control Design Based on Transfer Function	113
3.3.12	Microgrid Control in both Modes	114
3.4	System of Systems	116
3.4.1	Introduction	116
3.4.2	SoS Control	116
3.4.3	Decentralized Control	117
3.4.4	Multilevel Control.	120
3.4.5	Networked Control Systems	122
3.4.6	Comparative Analysis	125

3.5	Modeling and Analysis of Inverter-Based Microgrids.	126
3.5.1	Introduction	128
3.5.2	Microgrid Model in Autonomous Mode.	129
3.5.3	State-Space Model of a Voltage Source Inverter	132
3.5.4	Combined Model of All the Inverters	140
3.5.5	Network Model	141
3.5.6	Load Model	143
3.5.7	Complete Microgrid Model	144
3.5.8	Sensitivity Analysis.	145
3.6	Conclusions	147
3.7	Suggested Problems	148
	References.	152
4	Optimal Energy Management	159
4.1	Introduction	159
4.2	A Microgrid Model.	160
4.3	Microgrid and Load Forecasting	162
4.3.1	Proposed NNE	162
4.3.2	Microgrid Environment Forecasting.	166
4.4	Multiojective Energy Management.	167
4.4.1	Battery Scheduling	169
4.4.2	Fuzzy-Logic-Based Expert System	170
4.5	Simulation Results I	174
4.5.1	RE Power Generation and Load Forecasting.	174
4.5.2	Multiojective Intelligent Energy Management	177
4.6	Optimal Energy Cost Management	181
4.7	Microgrid Overview	183
4.7.1	PV Sources Control.	184
4.7.2	Storage Control	185
4.7.3	Grid Connection Control	186
4.7.4	DC Load Control	186
4.7.5	Power Balancing Principle	187
4.8	Supervision Control Design	188
4.8.1	Human–Machine Interface Layer.	189
4.8.2	Prediction Layer	189
4.8.3	Energy Management Layer.	190
4.8.4	Operation Layer	192
4.9	Simulation Results II.	193
4.9.1	Optimization Results	194
4.9.2	Powers Flow Simulation I	196
4.9.3	Powers Flow Simulation II.	199
4.9.4	Comparison and Discussion	200

4.10	Conclusions	201
4.11	Suggested Problems	202
	References.	203
5	A System of Systems Framework for Microgrids	209
5.1	Introduction	209
5.2	Microgrid Subsystems	210
5.2.1	Microgrid Central Controller	211
5.2.2	Microsource and Load Controllers.	212
5.2.3	Microturbines	213
5.2.4	Microsources and Fuel Cells.	213
5.2.5	Storage Devices	214
5.3	The Concept of SoS	214
5.3.1	Microgrids as SoS.	215
5.3.2	Grid-Connected Operation	216
5.3.3	Grid-Islanded Operation.	216
5.3.4	Operation of the Microgrid Under the SoS Framework.	219
5.4	Modeling of Microgrid	220
5.4.1	Microturbine Model	220
5.4.2	PV Solar Cell Model.	222
5.4.3	Wind Turbine Model.	223
5.5	Microgrid Control Architecture.	225
5.5.1	Introduction	226
5.5.2	Hierarchical Control	228
5.5.3	Consensus Control	229
5.5.4	Centralized and Decentralized Control.	230
5.5.5	More on Decentralized Control.	234
5.6	Application to Islanded Microgrid.	235
5.6.1	Two-Level Control Strategy	237
5.6.2	Local Subsystem Control.	237
5.6.3	Global Corrective Control	238
5.6.4	Simulation Results	239
5.7	Conclusions	241
5.8	Suggested Problems	242
