

Contents

Part I Biology

1	Theoretical Biology and Evolutionary Theory	3
1.1	Four Great Biologists	4
1.2	Theory of Evolution and Compositional Evolution	5
	References	8
2	Chance and Necessity	9
	Reference	12
3	Tinkering and Evolution	13
	Reference	15
4	Concepts for a Theoretical Biology	17
	References	23
5	General Systems Theory and Systems Biology	25
5.1	Systems Biology in the History of Biology	26
5.2	The Theoretical Method in Biology	28
	References	30

Part II Logic and Computing

6	Logic, Computing and Biology	33
6.1	Turing Machines and the Halting Problem	34
6.2	Algorithmic Complexity and Randomness in Biology	36
	References	38

7	Life	39
7.1	The Development of Complexity and Emergence	43
7.2	Determinism and Closed Evolution	46
	References	48
8	Algorithmic Chemistry	49
8.1	The Reactor and Experiments	50
8.2	Contingency and Necessity	54
	References	56
 Part III The Cell and Evolution		
9	The Spaces of Evolution	59
9.1	Laws Governing Organisms	60
9.2	Treatable Phenotypes	63
	References	65
10	Computing the Cell	67
10.1	Cell Theory Revisited	67
10.2	Organic Memory	70
	References	71
11	Gödel and the Blind Watchmaker	73
11.1	Gödel Incompleteness and Progressive Evolution	76
11.2	Lessons for Synthetic Biology	80
	References	81
12	In Conclusion: Goethe's Dream	83
	References	89
	Index	91
