

Contents

1	Fourier Series	1
1.1	Fourier Series	2
1.1.1	Even and Odd Functions	2
1.1.2	Definition of the Fourier Series	3
1.1.3	Calculation of the Fourier Coefficients	5
1.1.4	Fourier Series in Complex Notation	9
1.2	Theorems and Rules	13
1.2.1	Linearity Theorem	13
1.2.2	The First Shifting Rule (Shifting Within the Time Domain)	13
1.2.3	The Second Shifting Rule (Shifting Within the Frequency Domain)	16
1.2.4	Scaling Theorem	21
1.3	Partial Sums, Bessel's Inequality, Parseval's Equation	21
1.4	Gibbs' Phenomenon	24
1.4.1	Dirichlet's Integral Kernel	25
1.4.2	Integral Notation of Partial Sums	26
1.4.3	Gibbs' Overshoot	27
2	Continuous Fourier Transformation	33
2.1	Continuous Fourier Transformation	33
2.1.1	Even and Odd Functions	34
2.1.2	The δ -Function	34
2.1.3	Forward and Inverse Transformation	35
2.1.4	Polar Representation of the Fourier Transform	41
2.2	Theorems and Rules	42
2.2.1	Linearity Theorem	42
2.2.2	The First Shifting Rule	42
2.2.3	The Second Shifting Rule	44
2.2.4	Scaling Theorem	46

2.3	Convolution, Cross Correlation, Autocorrelation, Parseval's Theorem	47
2.3.1	Convolution	47
2.3.2	Cross Correlation	56
2.3.3	Autocorrelation	57
2.3.4	Parseval's Theorem	58
2.4	Fourier Transformation of Derivatives	60
2.5	Pitfalls	62
2.5.1	"Turn 1 into 3"	62
2.5.2	Truncation Error	64
3	Window Functions	71
3.1	The Rectangular Window	72
3.1.1	Zeros	72
3.1.2	Intensity at the Central Peak	72
3.1.3	Sidelobe Suppression	74
3.1.4	3 dB-Bandwidth	74
3.1.5	Asymptotic Behaviour of Sidelobes	75
3.2	The Triangular Window (Fejer Window)	76
3.3	The Cosine Window	77
3.4	The \cos^2 -Window (Hanning)	78
3.5	The Hamming Window	80
3.6	The Triplet Window	81
3.7	The Gauss Window	82
3.8	The Kaiser–Bessel Window	83
3.9	The Blackman–Harris Window	85
3.10	Overview over Window Functions	86
3.11	Windowing or Convolution?	90
4	Discrete Fourier Transformation	93
4.1	Discrete Fourier Transformation	93
4.1.1	Even and Odd Series and Wrap-Around	94
4.1.2	The Kronecker Symbol or the "Discrete δ -Function"	94
4.1.3	Definition of the Discrete Fourier Transformation	96
4.2	Theorems and Rules	100
4.2.1	Linearity Theorem	100
4.2.2	The First Shifting Rule (Shifting in the Time Domain)	101
4.2.3	The Second Shifting Rule (Shifting in the Frequency Domain)	102
4.2.4	Scaling Rule/Nyquist Frequency	102

4.3	Convolution, Cross Correlation, Autocorrelation, Parseval's Theorem	104
4.3.1	Convolution	105
4.3.2	Cross Correlation	108
4.3.3	Autocorrelation	109
4.3.4	Parseval's Theorem	109
4.4	The Sampling Theorem	110
4.5	Data Mirroring	115
4.6	How to Get Rid of the "Straight-Jacket" Periodic Continuation? By Using Zero-Padding!	119
4.7	Fast Fourier Transformation (FFT)	125
5	Filter Effect in Digital Data Processing	137
5.1	Transfer Function	137
5.2	Low-Pass, High-Pass, Band-Pass, Notch Filter	139
5.3	Shifting Data	146
5.4	Data Compression	147
5.5	Differentiation of Discrete Data	148
5.6	Integration of Discrete Data	149
6	Data Streams and Fractional Delays	155
6.1	Fractional Delays	155
6.2	Non-recursive Algorithms	156
6.3	Stability of Recursive Algorithms	164
6.4	Thiran's All-Pass Filter for $N = 1$	165
6.4.1	Impulse Response	167
6.4.2	Step Response	168
6.4.3	Ramp Response	169
7	Tomography: Backprojection of Filtered Projections	173
7.1	Projection	173
7.2	Backprojection of Filtered Projections	175
	Appendix: Solutions	183
